IMPORTANT NOTICES

General

• This manual has been authored with simplified grammar, to meet the needs of international users.
• The operator of this equipment must read and follow the descriptions in this manual. Wrong operation or maintenance can cancel the warranty or cause injury.
• Do not copy any part of this manual without written permission from FURUNO.
• If this manual is lost or worn, contact your dealer about replacement.
• The contents of this manual and equipment specifications can change without notice.
• The example screens (or illustrations) shown in this manual can be different from the screens you see on your display. The screens you see depend on your system configuration and equipment settings.
• Save this manual for future reference.
• Any modification of the equipment (including software) by persons not authorized by FURUNO will cancel the warranty.
• All brand and product names are trademarks, registered trademarks or service marks of their respective holders.

How to discard this product

Discard this product according to local regulations for the disposal of industrial waste. For disposal in the USA, see the homepage of the Electronics Industries Alliance (http://www.eiae.org/) for the correct method of disposal.

How to discard a used battery

Some FURUNO products have a battery(ies). To see if your product has a battery, see the chapter on Maintenance. Follow the instructions below if a battery is used. Tape the + and - terminals of battery before disposal to prevent fire, heat generation caused by short circuit.

In the European Union

The crossed-out trash can symbol indicates that all types of batteries must not be discarded in standard trash, or at a trash site. Take the used batteries to a battery collection site according to your national legislation and the Batteries Directive 2006/66/EU.

In the USA

The Mobius loop symbol (three chasing arrows) indicates that Ni-Cd and lead-acid rechargeable batteries must be recycled. Take the used batteries to a battery collection site according to local laws.

In the other countries

There are no international standards for the battery recycle symbol. The number of symbols can increase when the other countries make their own recycle symbols in the future.
SAFETY INSTRUCTIONS

Read these safety instructions before you operate or install the equipment.

**WARNING**
Indicates a condition that can cause death or serious injury if not avoided.

**CAUTION**
Indicates a condition that can cause minor or moderate injury if not avoided.

| Warning, Caution | Prohibitive Action | Mandatory Action |

### WARNING

**Do not open the equipment.**
This equipment uses high voltage that can cause electrical shock. Only qualified persons can work inside the equipment.

**Turn off power at switchboard if the something is dropped inside the equipment.**
Fire or electrical shock can result if the power remains on.

**Turn off power at switchboard if the equipment is emitting smoke or fire.**
Fire or electrical shock can result if the power remains on.

### CAUTION

**Do not disassemble or modify the equipment.**
Fire, electrical shock or bodily injury can result.

**Do not operate the equipment with wet hands.**
Fire or electrical shock can result.

**Keep the equipment away from rain, water and water splash.**
Fire or electrical shock can result if water gets into the equipment.

**Use the correct fuse.**
Use of a wrong fuse can cause bodily injury or fire.

---

**Warning Label**
A warning label is attached to the processor unit. Do not remove the label. If the label is missing or damaged, see your dealer about replacement.

- **Name:** Warning Label (1)
- **Type:** 86-003-1011-3
- **Code No.:** 100-236-233-10

---

To avoid electrical shock, do not remove cover. No user-serviceable parts inside.
**WARNING**

- Do not open the equipment unless authorized.
  
  This equipment uses high voltage which can cause electrical shock if mishandled.

- Turn off power at switchboard before starting the installation.
  
  Fire or electrical shock can result if the power is on.

- Be sure to connect to the correct power supply.
  
  Connection to a wrong power supply can cause fire or bodily injury.

- Do not disassemble or modify the equipment.
  
  Fire, electrical shock or bodily injury can result.

**CAUTION**

- Securely ground (protection earth) the equipment.
  
  Ineffective ground can cause electrical shock.

- Follow the compass safe distances shown in the table below to prevent interference to a magnetic compass.

FOREWORD

A Word to the Owner of the BR-500

Congratulations on your choice of the FURUNO BR-500 Bridge Navigational Watch Alarm System (BNWAS). We are confident you will see why the FURUNO name has become synonymous with quality and reliability.

For over 60 years FURUNO Electric Company has enjoyed an enviable reputation for innovative and dependable marine electronics equipment. This dedication to excellence is furthered by our extensive global network of agents and dealers.

Your equipment is designed and constructed to meet the rigorous demands of the marine environment. However, no machine can perform its intended function unless properly operated and maintained. Please carefully read and follow the operation and maintenance procedures set forth in this manual.

Thank you for considering and purchasing FURUNO.

We would appreciate feedback from you, the end-user, about whether we are achieving our purposes.

Features

The BR-500 monitors the Officer of the Watch’s (OOW) presence on the bridge to prevent maritime casualties. The system sends an alarm to the quarters of the backup officer if the OOW fails to respond to the active alarm or emergency call.

• Complies with IMO MSC.128(75).
• Watches for unattended bridge and operator disability.
• Transmits alarm to backup officer if the OOW fails to respond to active alarm or emergency call.
• Motion Detector (option) detects motion on the bridge to confirm operator fitness.
• Flash Beacon (option) flashes to remind OOW to confirm presence (by operating equipment in the system).

xx: minor change
Usage precautions

Back-up power supply

The BR-500 is not equipped with a back-up power supply. Use an external back-up power supply (24 VDC) when the main or auxiliary power fails.

Motion Detector (BR-560)

- The Motion Detector judges motion by the amount of temperature change within the detection area. If the area has source(s) of heat other than personnel or the temperature change is too small, detection of motion may not be possible. Keep the following points in mind:
  
  **Motion is mis-detected when**
  - movement in sleep is judged as motion.
  - movement by small animal(s) is judged as motion.
  - equipment that circulates air (air conditioner, etc.), steam-generating warmers and the like causes temperature change.
  - sunlight or shade in the detection area causes temperature change.

  **Motion cannot be detected if**
  - the temperature change in personnel or detection area is too small.
  - personnel motion is too fast or too slow
  - there is an impedance between personnel and the Motion Detector.

- The Motion Detector can be affected by sunlight. Install it in a place well away from sunlight.

Alarm ACK signal

The BR-500 receives the Alarm ACK signal in contact signal format only. It cannot receive the signal in serial format.

Resetting the watch alarm timer

Reset the watch alarm timer from the Timer Reset Panel, which is installed next to the Main Alarm Panel.
- Dashed lines indicate optional or local supply equipment.
- Environmental category:
  - Units protected from the weather: BR-510, BR-520, BR-530, BR-540, BR-560, BR-570
  - Units exposed to the weather: BR-550
1. MAIN ALARM PANEL

The Main Alarm Panel is the heart of the BNWAS. All settings are done from the Main Alarm Panel.

1.2 How to Turn the System On/Off

Power to the system is supplied from the power switch on the ship’s switchboard. After the power is applied to the system, the BNWAS display, shown below, appears.

**Note:** Wait at least one minute before reapplying the power to ensure correct startup.
1. MAIN ALARM PANEL

1.3 BNWAS Display

The BNWAS display is divided into the seven areas described below.

Operating mode
The current operating mode. The possible indications are Auto, Manual ON, and Manual OFF.

Power indication
The power indications shows the power being supplied to the system.
- Power AC/DC: Both AC and DC power
- Power AC: AC power
- Power DC: DC power

If something appears to be wrong with the system, first check the power source (battery) and cables.

System status indicator
The system status indicator rotates when the system is normal, and appears on all displays. If the indicator is not rotating, there can be a problem with the system. Contact a FURUNO agent or dealer for information.

Backup officer indication/selection
You select the backup officer with the SEL key. The current selection is underlined.

Help area
The help area shows all operational events, operation guides and error messages. See section 1.8 Help Area.

Watch time interval countdown timer
The length of the bar decreases as time progresses and the color of the bar changes with each stage.
1. MAIN ALARM PANEL

1.3 Watch time interval setting

The currently selected watch time interval appears at the top of the watch time interval countdown timer.

1.4 How to Adjust the LCD/LED Brilliance, Key Backlighting

The brilliance of the LCD of the Main Alarm Panel, the ALARM LED of the Timer Reset Panel and the LED of the Flash Beacon, and the backlighting for the keys of the Main Alarm Panel can be adjusted as shown below.

1. Press any arrow on the CursorPad to show the [BRILL] window.

2. Press the right or left arrow on the CursorPad to adjust the brilliance of the LED. The setting range is 0-7, and the default setting is 5.

3. Press the up or down arrow on the CursorPad to adjust the key backlighting of the Main Alarm Panel and the ALARM LEDs (incl. Flash Beacon). The setting range is 0-7, and the default setting is 5.

4. Press the MENU/ESC key to close the window. (The window closes automatically if there is no adjustment within several seconds.)

Note 1: If the screen is too bright with minimum brilliance at nighttime, install the shield film (option) to reduce the brilliance. See section 4.3.3.

Note 2: The system increases the brilliance one step in stages 1-3 of the watch alarm. When the timer is reset, the previous brilliance is restored. Brilliance is not changed if it is set for maximum at stages 1-3.
1.5 How to Select the Backup Officer

Press the SEL key at the BNWAS display to select a backup officer. The current selection is underlined.

1.6 Mode

The BR-500 has three main modes of operation:

- **Manual OFF**: The BNWAS is inactive. Use this mode when entering or just leaving harbor. No reset is necessary. Default setting.
- **Manual ON**: The BNWAS is active. Use this mode when the vessel is travelling on the open sea. Reset is necessary to continue operation.
- **AUTO**: The BNWAS is active or inactive according to the autopilot state. BNWAS is ON when the autopilot is ON; OFF when the autopilot is OFF.

1. Press the **MODE** key. You are asked to enter the password. Enter the password. See the FURUNO service technician for the password.
2. Use the CursorPad to select a mode then press the **ENT/CALL** key.
1.7 Watch Alarm Sequence

The watch alarm checks for the presence of the OOW on the bridge. If equipment on the bridge (Main Alarm Panel, Timer Reset Panel, Backup Navigator, Autopilot, or Motion Detector) is operated within the selected watch time interval, no alarm is given. If no equipment is operated within the selected watch time interval, the system continues in the sequence shown below.

1. The watch alarm timer starts when the system is started. The length of the watch time interval countdown timer bar (color is light-blue at this time) decreases as time progresses. (The timer interval is set on the Administrator Menu, which is under the control of the Administrator.)

If the equipment connected to the system is operated before the timer reaches zero, the timer countdown is restarted.

2. If the equipment connected to the system is not operated within the watch time interval, the PREWARNING phase begins:

- Main Alarm Panel shows a 15-second visual alarm (in yellow)
- Timer Reset Panel flashes its ALARM LED 15 seconds
- Flash Beacon flashes
3. If the equipment connected to the system is not operated during the PREWARN-ING, the 1st stage visual and aural alarms begin.

- Main Alarm Panel releases 15-second visual (in red) and audible alarms
- Timer Reset Panel flashes its ALARM LED 15 seconds and sounds its buzzer 15 seconds
- Flash Beacon flashes

4. If the equipment connected to the system is not operated within 15 seconds, the 2nd stage visual and aural alarms begin.

- Main Alarm Panel shows a 90-180-second visual alarm (in red) and sounds its buzzer 90-180 seconds
- Timer Reset Panel flashes its ALARM LED 90-180 seconds and sounds its buzzer 90-180 seconds
- Cabin Panel:
  - Captain selected as a backup navigator: ALARM LED lights and buzzer sounds, 90-180 seconds each
  - Backup officer (selected on BNWAS display): ALARM LED lights and buzzer sounds, 90-180 seconds each
  - Other backup officer: No action
  - Public cabin: ALARM LED lights and buzzer sounds, 90-180 seconds each
- Flash Beacon flashes or is OFF (depending on DIP SW setting)

Note: The alarm cannot be stopped from a Timer Reset Panel at this point.
5. If, within the 2nd stage watch interval (90-180 seconds), the equipment connected to the system is not operated or the OOW does not press the **RESET** key, the 3rd stage visual and aural alarms begin.

6. At the 2nd and 3rd stages, stop the buzzer and acknowledge the alarm with the **RESET** key on the Main Alarm Panel.

1.8 Help Area
The help area displays system failures, operational events, operation help, etc.

1.8.1 System failure indications
This section describes how system failures are given and the accompanying operation flow.

1) The help area shows system failure messages in red.
2) The buzzer at the Main Alarm Panel sounds. There is no visual or audible alarm at a Timer Reset Panel nor is the alarm forwarded to a Cabin Panel.

3) Press any key on the Main Alarm Panel to stop the buzzer and acknowledge the alarm.

4) For any system error, contact a FURUNO sales representative or service technician for advice.

The table on the next page shows the system failure messages.

</tbody>
</table>

*RESET key not pressed or equipment on bridge is not operated.

**1.9 How to Make an Emergency Call**

The purpose of an emergency call is to immediately start the watch timer from the 2nd stage. (This feature is disabled if the watch alarm is already in the 2nd or 3rd stage.)

Press the **EMG** key to start the emergency call.
The system goes into the 2nd stage (or 3rd stage depending on system setting). In the 2nd stage, the following occurs:

- Main Alarm Panel presents a visual alarm and sounds its buzzer.
- Timer Reset Panel flashes its ALARM LED and sounds its buzzer.
- Cabin Panel:
  - Captain's room: ALARM LED lights and buzzer sounds.
  - Backup officer (selected on BNWAS display): ALARM LED lights and buzzer sounds.
  - Other backup officer: No action
  - Public cabin: ALARM LED lights and buzzer sounds.
  - Flash Beacon flashes or is OFF (depending on DIP SW setting).

If the visual and aural alarms are not cancelled at the 2nd stage, the system goes to the 3rd stage and all visual and aural alarms are generated.

To stop the buzzer or cancel the emergency call, press the **RESET** key on the Main Alarm Panel. The system returns to the dormant state.

### 1.10 How to Call a Navigation Officer

The OOW can call the Cabin Panel of the back-up officer. Use the call feature when it is necessary to call a navigation officer to the bridge. This feature is available in all modes. When the watch alarm is generated during a call, the call is cancelled to process the alarm.

The ALARM LED on the called Cabin Panel lights (red) and the Cabin Panel's buzzer sounds.

To call a navigation officer do the following.

1. Press the **ENT/CALL** key to show the following window.
2. Use the CursorPad to select the navigation officer to call.
3. Press the **ENT/CALL** key to start the call. The called Cabin Panel’s ALARM LED lights and the panel’s buzzer sounds.
4. To stop the call, press the **ENT/CALL** key again.
2. OPTIONAL EQUIPMENT

2.1 Timer Reset Panel BR-530, BR-550

The Timer Reset Panel BR-530 is installed on the bridge, and the Watertight Timer Reset Panel BR-550 is installed on the wing when it is necessary to have a unit there. A total of six can Timer Reset Panels can be installed.

If the RESET button is pressed within the selected watch time interval, the watch timer is reset. If operation on the bridge is not confirmed within the time interval, the ALARM LED flashes (in yellow) every second for 15 seconds after the selected time interval ends. The ALARM LED flashes an additional 15 seconds after the PREWARNING phase ends, accompanied by a 15-second audible alarm. Reset can be done at the PREWARNING and 1st stage.

You can reset the watch alarm at the 1st stage (before the alarm is sent to the next stage) with the RESET button on the Timer Reset Panel. If the alarm is sent to the 2nd or 3rd stage, the alarm cannot be stopped from the Timer Reset Panel. To acknowledge the alarm from the 2nd or 3rd stage, use the RESET key on the Main Alarm Panel.

The RESET LED lights (in green) continuously when the unit is powered.

**Note 1:** Press the RESET button with a touch-and-release action to reset the watch timer. The watch timer is not reset if the button is pressed and held.

**Note 2:** When the RESET button is pressed and held, the connection between the Processor Unit, Cabin Panel and Timer Reset Panel is checked. The buzzer sounds when the test is started. See section 3.4.
2.2 Cabin Panel BR-540

The Cabin Panel is installed in all navigation officers’ quarters and in public areas. The Cabin Panel releases audible and visual alarms if the OOW did not confirm presence on the bridge within the selected watch time interval. A total of 12 Cabin Panels can be installed.

**DUTY LED**

The DUTY LED is illuminated (in green) when the BNWAS is active and according to type of Cabin Panel:

- Cabin Panel set as Captain, Backup Officer or Public is illuminated in all phases of the watch alarm.

**Note:** The LED is disabled when a 4-core cable (MPYC-4 or equivalent) connects Cabin Panel(s) to the Processor Unit.

**ALARM LED**

The ALARM LED lights (in red) and the buzzer sounds in response to an alarm sent to the 2nd and 3rd stages.

**TEST switch**

The TEST switch checks the LEDs and the buzzer for correct operation. The connection between the Cabin Panel and Processor Unit is also checked. (This check is not available when those units are connected to each other with a 4-core cable.) See section 3.4.
2.3 **Motion Detector BR-560**

The Motion Detector BR-560 detects motion on the bridge. The maximum motion detection range is 5 m.

The “motion” signal is output via the Processor Unit to tell the Main Alarm Panel to reset the watch alarm.
2.4 Flash Beacon BR-570

The Flash Beacon BR-570 flashes at the Prewarning phase and the 1st stage. It either flashes or is OFF at the 2nd and 3rd stages depending on the setting of segment #4 of DIP SW S1. See section 4.8.
3. MAINTENANCE, TROUBLE-SHOOTING

This chapter provides maintenance and troubleshooting procedures for the user and serviceman.

### WARNING

**ELECTRICAL SHOCK HAZARD**  
Do not open the equipment.  
This equipment uses high voltage that can cause electrical shock.  
Only qualified persons can work inside the equipment.

### NOTICE

Do not apply paint, anti-corrosive sealant or contact spray to plastic parts or equipment coating.  
Those items contain products that can damage plastic parts and equipment coating.

#### 3.1 Maintenance

Maintenance is important to keep the equipment in good working order. Check the items shown in the table monthly.

<table>
<thead>
<tr>
<th>Item</th>
<th>Check point</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cabinet</td>
<td>Dust on the cabinets</td>
<td>Remove dust with a dry clean cloth. Do not use commercial cleaners to clean the equipment. Those cleaners can remove paint and markers.</td>
</tr>
<tr>
<td>LCD on Main Alarm Panel</td>
<td>Dust on the LCD</td>
<td>Wipe the LCD carefully to prevent scratching, using tissue paper and an LCD cleaner. To remove dirt or salt deposits, use the LCD cleaner, wiping slowly with tissue paper so as to dissolve the dirt or salt. Change paper frequently so the salt or dirt will not scratch the LCD. Do not use solvents such as thinner, acetone or benzene for cleaning.</td>
</tr>
</tbody>
</table>
3.2 **Fuse Replacement**

The fuses on the PWR Board (24P0105) inside the Processor Unit protect the system from overvoltage and overcurrent. If the power is not on, have a technician check for blown fuse(s). If a fuse(s) has blown, replace the fuse(s) with one of the same rating. If the fuse(s) blows again, contact your dealer.

![WARNING]

**WARNING**

Use the proper fuse.

Use of a wrong fuse can result in damage to the equipment or cause fire.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Code No.</th>
<th>Qty</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuse</td>
<td>FGMB 250V 2A PBF</td>
<td>000-157-497-10</td>

</tr>
<tr>
<td>Fuse</td>
<td>FGMB 250V 3A PBF</td>
<td>000-157-568-10</td>
<td>1</td>
</tr>
</tbody>
</table>

3.3 **Troubleshooting**

If the equipment appears to be abnormal, follow the procedure in the table below to try to restore normal operation. If you cannot restore normal operation, do not check inside the equipment. Get a qualified technician to check the equipment.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Main Alarm Panel is not powered.</td>
<td>• Check if the Processor Unit is ON.</td>
</tr>
<tr>
<td></td>
<td>• Check if the power cable is properly connected.</td>
</tr>
<tr>
<td></td>
<td>• Check if the power cable is damaged or corroded.</td>
</tr>
<tr>
<td></td>
<td>• Check the connection between the Processor Unit and the Main Alarm Panel.</td>
</tr>
<tr>
<td>A key on the Main Alarm Panel is operated, but there is no response.</td>
<td>Reset the power with power switch on the ship’s switchboard and operate the key. If the key does not respond, request service.</td>
</tr>
<tr>
<td>The results of the ROM and RAM test for the Main Alarm Panel or Processor Unit show an NG (No Good).</td>
<td>Reset the power with power switch on the ship’s switchboard. If NG appears again, request service.</td>
</tr>
<tr>
<td>An alarm is not sent to a Cabin Panel.</td>
<td>Do the procedure in section 3.4 to check the connections.</td>
</tr>
<tr>
<td>The message “Failure: Communication” appears and the buzzer sounds.</td>
<td>The message indicates communication error between Main Alarm Panel and Processor Unit. Press any key to silence the buzzer. Reset the power with power switch on the ship’s switchboard. If the problem still occurs, request service.</td>
</tr>
<tr>
<td>The message “Failure: DC” (or “Failure: AC”) appears and the buzzer sounds.</td>
<td>The message indicates power failure of corresponding power. Press any key to silence the buzzer. Check the power supply.</td>
</tr>
</tbody>
</table>
3.4 How to Check Connection Between Processor Unit/Cabin Panel/Timer Reset Panel

You can check the connection between the Processor Unit/Cabin Panel/Timer Reset Panel. The tested panel sends a test signal to the Processor Unit. The Processor Unit receives the test signal then commands that panel to light or flash its LEDs and sound its buzzer.

**Note:** If the 4-core cable (MPYC-4, or equivalent) connects Cabin Panel(s), use the EMG call on the Main Alarm Panel to do the check. The TEST switch on the Cabin Panel is disabled when the 4-core cable is used.

Push the TEST switch or RESET button (long-push) to start the test. The tested panel is normal if its LEDs and buzzer perform as shown in the table below.

<table>
<thead>
<tr>
<th>Cabin Panel</th>
<th>Timer Reset Panel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item</td>
<td>Normal State</td>
</tr>
<tr>
<td>ALARM LED</td>
<td>Lights 5 s</td>
</tr>
<tr>
<td>DUTY LED</td>
<td>Lights 5 s</td>
</tr>
<tr>
<td>Buzzer</td>
<td>5 s</td>
</tr>
</tbody>
</table>

**Note 1:** The watch timer is not reset during the test.
3. MAINTENANCE, TROUBLESHOOTING

**Note 2:** A Cabin Panel that is currently forwarding an alarm cannot be tested. However, you can test the Cabin Panels that are not forwarding an alarm. (For example, in the 2nd stage, a Cabin Panel other than the one in the back-up officer’s quarters can be tested.)

### 3.5 Life Expectancy of Major Parts

The life of the fan depends on the operating environment. It is recommended to replace the fan before its expected expiration.

<table>
<thead>
<tr>

* The lower cable in like cables may be supplied during product transition. There is no difference in quality between the two cables.
4.2 Mounting Considerations

Do the installation following the information in IEC 62616 Annex A and IMO MSC.128(75).

- Locate the units away from exhaust pipes and vents.
- Make sure the location has good ventilation.
- Mount the units where shock and vibration are minimal.
- Locate the units away from the equipment that generates electromagnetic fields, such as a motor or generator.
- Follow the maintenance space indicated in the outline drawings, to facilitate maintenance and servicing.
- Follow the compass safe distances indicated on page iii to prevent interference to a magnetic compass.
- Keep the units away from direct sunlight to prevent heat that can build up inside their cabinets. The LCD of the Main Alarm Panel BR-510 can darken if put in direct sunlight.
- **For the Main Alarm Panel**, the optimal viewing distance is 0.5 m. Select a location within that distance.
- **For the Main Alarm Panel, Timer Reset Panel, Motion Detector**:
  - Locate the units on the bridge where a proper lookout is available.
  - The means of activating the reset functions shall be easily accessible from the conning position, the workstation for navigating and maneuvering, and the workstation for monitoring and the bridge wings (if applicable).
  - The 1st stage audible alarm shall be audible from all operational positions on the bridge where the OOW may reasonably be expected to be stationed.
- **On the Motion Detector installation**, obstructions must not be within the detecting range of the sensor. Observe the requirements shown in the illustration when you select an installation location.

- **For the Flash Beacon**, the flashing indication shall be visible from all operational positions on the bridge where the OOW may reasonably be expected to be stationed.
4.3 **Main Alarm Panel BR-510**

The Main Alarm Panel can be mounted on a desktop or flush mounted in a console, on the bridge. Follow the mounting considerations in section 4.2 to select a location. Additionally, the unit must be located on the bridge where a proper look out is provided.

4.3.1 **Desktop mount**

This mounting method requires the optional hanger.

1. Unscrew knobs to remove the unit from the hanger.
2. Make four pilot holes (for 5x20 self-tapping screws) in the mounting location.
3. Fix the hanger to the mounting location with four self-tapping screws (5x20, supplied).
4. Attach cables to the back of the unit (see section 4.7.3).
5. Set the unit to the hanger, and fasten knobs to fix the unit.

4.3.2 **Flush mount**

1. Use the template (supplied) to make a hole in the mounting location.
2. Prepare four pilot holes (for 3x20 self-tapping screws) at the mounting location.
3. Remove the front panel from the unit by unfastening the catches at the rear of the panel.
4. Set the F mount cushion (supplied) to the hole made at step 1.
5. Connect cables to the unit. (See section 4.7.3).
6. Use four self-tapping screws (3x20, supplied) to fasten the unit to the mounting location then re-attach the front panel.
4. INSTALLATION

4.3.3 Shield film (option)

If the screen is too bright with minimum brilliance at nighttime, install the shield film to reduce the brilliance.

1. Clean the LCD with an LCD cleaning cloth.
2. Peel off the protective backing from the shield film.
3. Set the top edge of the shield film to the top edge of the panel and slowly attach the film.

4.4 Processor Unit BR-520

The Processor Unit is designed to be mounted on a bulkhead or the deck. Follow the mounting considerations in section 4.2 when selecting a location.

Refer to the outline drawing at the back of this manual for dimensions. Fasten the unit with M6 bolts or 6×20 self-tapping screws. (Supply bolts locally.)

4.5 Timer Reset Panel BR-530, Cabin Panel BR-540, Motion Detector BR-560, Flash Beacon BR-570 (optional units)

These units can be flush mounted in a panel, or fixed to a bulkhead. Follow the mounting considerations in section 4.2 when selecting a location.

4.5.1 Flush mount

Prepare a cutout in the location, referring to the outline drawings. Connect the signal cable to the unit BEFORE you install the unit. (See section 4.7.4.) Set the unit to the cutout and fasten the unit with four 3×16 self-tapping screws (supplied).

<table>

</tbody>
</table>
4.5.2 Bulkhead mount (option)

This mounting method requires the optional bulkhead mount kit (Type: OP24-20, Code No. 001-118-740-00), the contents of which are shown in the table below. The cable can be led into the unit from the bottom or rear of the unit.

<table>

</tr>
</tbody>
</table>

**Lead in the cable from the rear of the unit**

1. Prepare a cutout in the mounting location, referring to the outline drawing.
2. Pass the cable through the cutout and the Mount Case and connect it to the terminal on the Chassis.
3. Remove the Clamp from the bottom of the Mount Base. Remove the cable protector from the clamp and attach it to the supplied clamp. Attach the supplied Clamp to the rear cover with the same screws. (You may discard the clamp originally attached to the Mount Base.)
4. Fasten the cable to the Clamp with a cable tie (local supply). As shown in the figure below, make the distance between the terminal and the cable tie 100 mm.

5. Fasten the Mount Base to the mounting location with four self-tapping screws (supplied). Fasten the Chassis to the Mount Case with four binding screws (supplied).

**Lead in the cable from the bottom of the unit**

1. Fasten Cable Clamp 2 to the Mount Base.
2. Fasten the Mount Base/Clamp to the mounting location with four self-tapping screws (supplied).

3. Pass the signal cable through the Mount Case.

4. Connect the signal cable to the WAGO terminal block. See the interconnection diagram.

5. Set the Chassis to the Mount Base. Set the signal cable in the notch in the Clamp.
4. INSTALLATION

6. Fasten the Chassis to the Mount Case with binding screws (supplied)

7. Fasten the signal cable to the Clamp with a cable tie.

4.6 Watertight Timer Reset Panel BR-550 (option)

Follow the mounting considerations in section 4.2 when selecting a location. Refer to the outline drawing at the back of this manual for dimensions.

1. Pass the signal cable through the gland and then the Nut of the Waterproof Case. Pass the cable into the unit. Process the cable as shown on page 4-13.
2. Connect the signal cable to the WAGO terminal block on the Chassis. See the interconnection diagram.

3. A gasket is fitted on the Chassis. Confirm that the gasket is correctly seated. If not correctly seated, re-seat the gasket, referring to the illustration below for the inserting direction.

4. Fasten the Chassis to the Waterproof Case with the screws supplied. Do not use other types of screws; watertight integrity cannot be guaranteed.

5. Tighten the nut.

6. Fasten the unit to the mounting location with the supplied self-tapping screws (6×30, Code No. 000-162-614-10).
4. Installation

4.7 Wiring

4.7.1 Processor Unit

There are two power terminals: AC and DC. Connect each power cable to its power terminal. Connect the signal cables to their appropriate WAGO terminal blocks on the MAIN Board. Use the terminal opener (attached inside the Processor Unit) to open the WAGO terminal blocks.

Use the cable ties (supplied) to bind the cables to the cable posts on the Processor Unit. Close the shield cover. Run a ground wire (IV-2sq) between one of the two earth terminals on the unit and the ship’s ground.

TB1: DPYC-1.5 (AC), DPYC-2.5 (DC)  
TB2: FRU12-05AFFM  
TB3 - TB6: MPYC-7 (or MPYC-4*)  
TB7 - TB15: MPYC-7 (or MPYC-4*)  
TB16, TB17: MPYC-4  
TB18: MPYC-2  
TB19: MPYC-2  
TB20: TTYCS-1  
TB21: MPYC-2  

*1 Cables shown are JIS (Japan Industrial Standard) cables. Use equivalent if not available locally. See “JIS Cable Guide” in the Appendix for how to find equivalent cable.  
*2 The TEST function and DUTY LED are disabled when this cable is used.

To connect BR-560, connect it to TB 16 and TB17(or TB21) with cable MPYC-4.  
To connect Back-up Navigator, Operator fitness, connect to TB17 or TB21 with cable MPYC-2.
How to fabricate and fix cables to the Processor Unit

**Power cables for Processor Unit (DPYC-1.5 (AC power), DPYC-2.5 (DC power))**

- L = Distance from cable clamp to terminal connection
- DPYC-1.5: φ = 11.7 mm
- DPYC-2.5: φ = 12.8 mm

**MPYC-2 (Operator Fitness), MPYC-4*1 (Motion Detector, Flash Beacon)**

- MPYC-2
  - φ = 10.0 mm
  - Also available for Cabin Panel connection.

**MPYC-4**

- φ = 11.2 mm

**MPYC-7**

- φ = 13.2 mm

*1 Also available for Cabin Panel connection.

*2 Use MPYCY-7 for Watertight Cabin Panel.

**TTYCS-1 (VDR)**

- L = Distance from cable clamp to terminal connection
- TTYCS-1
  - φ = 10.1 mm

**Cable Specifications**

- **MPYC-2**
  - Insulator: S = 1 mm²
  - φ = 1.29 mm

- **MPYC-4**
  - Insulator: S = 1 mm²
  - φ = 1.56 mm

- **MPYC-7**
  - Insulator: S = 2.5 mm²
  - φ = 2.01 mm

**Crimping Instructions**

- **Crimp-on lug**
  - Inner diameter: φ = 4
  - Outer diameter: φ = 7

**Assembly Instructions**

- **Remove paint.**
- **Cut the sheath.**
- **Connect cores to WAGO terminal block.**
- **Set this part in cable clamp.**

- **Cut vinyl sheath.**
- **Pull out cables from shield; solder vinyl wire to shield.**
- **Set this part in cable clamp.**
### 4.7.2 Wiring information

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Operator fitness** | • **FAR-2105**: It is not possible to create a connection for operator fitness between FAR-2105 and the Processor Unit, because the FAR-2105 does not have operator fitness output.  
  • **FAR-2107**: Use port J612 (pin #7/8 for operator fitness), where a contact signal is available.  
  • **Other makes of radars**: Check for availability of contact signal. |
| **FRU12-05AFFM** (between BR-510 and BR-520) | This cable is fit with a Micro-C connector (male) on one end and a stripped end for connection to the BR-520. The standard length is 6 m. 10 m, 20 m, 30 m, 40 m, and 50 m cables are optionally available. |
| **Cable MPYC-7** (between BR-530/550 and BR-520) | 40 m and the total length for all units is max. 150 m. For example, when four BR-530 are installed: No.1 BR-530: 40 m No. 2 BR-530: 40 m No. 3 BR-530: 40 m No. 4 BR-530: 30 m Total length: 150 m |
| **Motion Detector BR-560** | • Pyroelectric detection  
  • Detection range: Up to 5 m, 80°×80°  
  • Detection rate: 0.8 thru 1.2 m/s  
  • Detection sensitivity: 4°C (difference from surround in temperature)  
  Generally, up to two Motion Detectors can be installed, at INPUT3/4 and INPUT5-8. Also, INPUT port 2 can be used by setting [INPUT2] on the Service menu to [Timer Reset]. |
4.7.3 **Main Alarm Panel**

Connect the Processor Unit to the CAN bus connector with the cable FRU12-05AFFM (supplied). Run a ground wire (IV-2sq) between the ground terminal and ship’s ground.

4.7.4 **Timer Reset Panel, Cabin Panel, Motion Detector, Flash Beacon**

The wiring procedure is common to all the above-mentioned units.

<table>
<thead>
<tr>
<th>Cable to use</th>
<th>Description</th>
</tr>
</thead>
</table>
| Cable MPYC-7 (between respective unit and BR-520) | Timer Reset Panel
Max. length of single cable: 40 m
Max. length of all cables: 150 m |
| Cabin Panel | Max. length of single cable: 80 m
Max. length of all cables: 300 m |
| Cable total length | |
| Cabin Panel: max. 300 m | Timer Reset Panel: max. 150 m |

1) Loosen four screws to remove rear cover.
2) Process cable and connect cable to WAGO terminal block. Use terminal opener (inside Processor Unit) to open terminals. (Shown: Timer Reset Panel)
3) Close rear cover. Fasten cable to clamp with cable tie (supplied).
4.7.5 **Flash Beacon**

The LED of the Flash Beacon can be adjusted externally. Connect a junction box (local supply) and external dimmer (3 kΩ, local supply) as shown below to enable the adjustment.

To use an external dimmer, set the jumper block JP1 to the 1-2 position.

4.7.6 **How to fabricate cables for the Cabin Panel, Timer Reset Panel, Flash Beacon and Motion Detector**

Fabricate the above-mentioned cables as shown below.
4.8 DIP Switch, Rotary Switch Settings

A DIP switch and a Rotary switch are provided in the Processor Unit to adjust the equipment according to applicable regulations and ship's requirements.

Location of switches in the Processor Unit

**DIP SW S1**

The DIP SW S1 allows adjustment of the items listed in the table below. The items in bold are the default settings.

<table>
<thead>
<tr>
<th>SW No.</th>
<th>Function</th>
<th>DIP SW Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

</tbody>
</table>

**Rotary SW S2**

The Rotary SW S2 changes the frequency of the buzzer. Use a plastic screwdriver to turn the switch to the appropriate position. See the illustration above for switch position and frequency.
4.9 How to Adjust LED Brilliance

The brilliance of the LEDs on the BR-530, BR-540, BR-550 and BR-570 can be adjusted. If the brilliance is too low or too high, adjust the corresponding potentiometer. Turn the potentiometer clockwise to raise brilliance, counterclockwise to lower it.

4.10 Menu Settings

4.10.1 Administrator Menu

The Administrator Menu has initial settings that set the system according to the requirements of your vessel. Only the Administrator of the system can enter the initial settings.

1. Press the MENU/ESC key.
2. You are asked to enter the password.
3. Use the up or down arrow on the CursorPad to select a menu item then press the **ENT/CALL** key. An options window or spinner box appears depending on your selection.

4. Use the up or down arrow on the CursorPad to select an option or set a value then press the **ENT/CALL** key.

### Description of Administrator menu

### Menu Item | Description | Options
--- | --- | ---
Backup Officer | Change the name of navigation officers; add navigation officers; set the function of the Cabin Panel in the quarters of the Captain. | ![Backup Officer Options](image1)
**How to select the function of the Cabin Panel in the quarters of the Captain:**
1) Select [1 CAPTAIN].
2) Press the ENT/CALL key.
3) Select [Backup] or [Captain]. If [Captain] is selected, a small "C" appears before the 1st name on the back-up officer list on the BNWAS display.
4) Press the ENT/CALL key.
**How to change the name of navigation officers, add navigation officers:**
1) Select a name. (To add an officer, select a blank line.)
2) Press the ENT/CALL key to show the spinner box for setting name.
3) Use the right or left arrow on the CursorPad to set the cursor on a character.
4) Use the up or down arrow on the CursorPad to select a character.
**Note:** You can clear the entire line by long-pushing the ENT/CALL key.
5) Repeat steps 3 and 4 to change other characters.
6) Finally, press the ENT/CALL key to finish.
2nd Stage Buzzer | Select the 2nd stage buzzer type. Intermittent1: ON: 200 ms, OFF: 250 ms Intermittent2: ON: 200 ms, OFF: 400 ms | ![2nd Stage Buzzer Options](image2)
Key Beep | Turn the key beep on or off. | ![Key Beep Options](image3)
Self TEST | Check the equipment for proper operation. See the procedure on the next page. | ![Self TEST Options](image4)
Language | Choose the language: English, Japanese, Chinese, Korean, or Russian. | ![Language Options](image5)
4. INSTALLATION

Self TEST

The self test checks the equipment for proper operation.

1. Use the CursorPad to select [Self TEST] from the Administrator menu then press the ENT/CALL key.

Self test description

- The ROM and RAM of the Main Alarm Panel and Processor Unit are checked. The results are shown as "OK" or "NG" (No Good). If an "NG" appears, try the test again. If "NG" still appears, have a technician check the set.
- The Boot and CPU program numbers of the Main Alarm Panel and the Processor Unit are shown.
- The program no. of the CPLD (Complex Programmable Logic Device) in the Processor Unit is shown.
- The rectangles and oval below the program numbers are for checking the keys and CursorPad. Press a key or an arrow on the CursorPad. The key's/arrow's on-screen location "lights" in red if the key/arrow is normal. Press the key/arrow again to remove the red.

2. To quit the Self TEST, press the MENU/ESC key three times.
4. INSTALLATION

4.10.2 Service Menu

The Service Menu contains items for the installer and the service technician. Contact a sales representative or service technician for the password.

1. Press the MENU/ESC key.
2. You are asked to enter the password.

**Note:** If the BNWAS is active, the message shown right appears. The cursor is selecting "Yes"; press the ENT/CALL key to show the Service menu.

![Service Menu Window](image)

JIS Cable Guide

Cables listed in the manual are usually shown as Japanese Industrial Standard (JIS). Use the following guide to locate an equivalent cable locally.

JIS cable names may have up to 6 alphabetical characters, followed by a dash and a numerical value (example: DPYC-2.5).

For core types D and T, the numerical designation indicates the cross-sectional Area (mm²) of the core wire(s) in the cable.

For core types M and TT, the numerical designation indicates the number of core wires in the cable.

1. Core Type 2. Insulation Type 3. Sheath Type 4. Armor Type 5. Shielding Type 6. Core Sheath

<table>
<thead>
<tr>
<th>Core Type</th>

SPECIFICATIONS OF BRIDGE NAVIGATIONAL WATCH ALARM SYSTEM
BR-500

1 MAIN ALARM PANEL (BR-510)
1.1 Display 4.3-inch color LCD, 480 x 272 dots
1.2 Brilliance 0.15 to 500 cd/m² (w/o shield film)
1.3 Status indication Dormant period, Alarm stage, Backup officer, Power status, Operation mode
1.4 Other functions Backup officer selection, Emergency call, Officer call

2 PROCESSOR UNIT (BR-520)
2.1 Input port
Operator fitness 4 ch (normal open)
Autopilot mode 1 ch (normal open)
Backup navigator 1 ch (normal close)
2.2 Output port
System failure 2 ch (normal close)
2.3 Serial signal 1 ch (for VDR)
2.4 Cabin panel control 12 sets max. (3 sets: cascade connection)
2.5 Timer reset panel control 6 sets max. (2 sets: cascade connection)
2.6 Motion detector 2 ch
2.7 Flash beacon 3 ch

3 CABIN PANEL (BR-540)
3.1 Input voltage 12 VDC: 100 mA or less (supplied from processor unit)
3.2 Visible indication Alarm LED, Duty LED
3.3 Audible alarm Buzzer
3.4 Wire breaking diagnose Press button
3.5 Dimmer Inner volume and linked with key light

4 TIMER RESET PANEL (BR-530)/ WATERTIGHT TIMER RESET PANEL (BR-550)
4.1 Visible indication Alarm LED, Reset LED
4.2 Audible alarm Buzzer
4.3 Timer reset Press button (yellow)
4.4 Wire breaking diagnose Continuing pressure of button
4.5 Dimmer Inner volume and linked with key light

5 MOTION DETECTOR (BR-560, OPTION)
5.1 Detection method Infrared body motion sensor
5.2 Distance 5 m
5.3 Angle ±40°
5.4 Object size 700 mm x 250 mm (minimum)
5.5 Resolution 0.8 m/s (minimum speed)
5.6 Signal output Contact closure (normal open)

6 FLASH BEACON (BR-570, OPTION)
6.1 Previous visible alarm Watch alarm lamp (yellow)
6.2 Dimmer External or inner volume and linked with key light

7 POWER SOURCE
100-230 VAC: 0.6-0.4 A, 1 phase, 50/60 Hz
24 VDC: 1.0 A (back-up source)

8 ENVIRONMENTAL CONDITION
8.1 Ambient temperature -15°C to +55°C
8.2 Relative humidity 93% at 40°C
8.3 Degree of protection
   Processor unit IP22 (bulkhead), IP20 (tabletop)
   Main alarm panel, Cabin panel, Timer reset panel IP22
   Motion detector, Flash beacon IP22
   Watertight timer reset panel IP56
8.4 Vibration IEC 60945 Ed.4

9 COATING COLOR
9.1 Watertight timer reset panel N1.0
9.2 Others N2.5

</table>

注記
1. 指定寸法公差は表1による。
2. #印寸法は、最小サービス空寸法とする。
3. 取付用ネジはナベタップビンネジ呼び径3×20を使用のこと。

NOTE
1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. #: MINIMUM SERVICE CLEARANCE.
3. USE TAPPING SCREWS Ø3x20 FOR FIXING THE UNIT.
注記
1）#印寸法は最小サービス空間寸法とする。
2）指定外の寸法公差は表1による。
3）取付はM6ボルトまたはトラスカップネジ呼び径6×20を使用のこと。

NOTE
1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. # MINIMUM SERVICE CLEARANCE.
3. USE M6 BOLTS OR TAPPING SCREWS #6x20 FOR FIXING THE UNIT.

</tbody>
</table>

注記 1）指定外の寸法公差は表1による。
2）#印寸法は最少サービス空間寸法とする。
3）取付用ネジはトラスツネピンネジ
呼び径6x30を使用のこと。

NOTE 1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. #: MINIMUM SERVICE CLEARANCE.
3. USE TAPPING SCREWS #6x30 FOR FIXING THE UNIT.
表1 TABLE 1

寸法区分 (mm) | 公差 (mm)  
---|---
≤500 | ±1.5  
500 < L ≤1000 | ±2.5  
1000 < L ≤5000 | ±3  

注記 1) 指定外の寸法公差は表1による。
2) #印寸法は最小サービス空間寸法とする。
3) 取り付けは、パイプダングリング呼び径3×16を使用のこと。

NOTE 1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. # MINIMUM SERVICE CLEARANCE.
3. USE BIND TAPPING SCREWS #5×16 FOR FIXING THE UNIT.
注 記 1) 指定外の寸法公差は表1による。
2) 破印寸法は最小サービス空隙寸法とする。
3) 取り付けはトラスタッピネジ呼び径4×20を使用のこと。
NOTE
1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. #: MINIMUM SERVICE CLEARANCE.
3. USE TAPPING SCREWS Ø4x20 FOR FIXING THE UNIT.

注 記
1) 指定外の寸法公差は表1による。
2) #印寸法は最小サービス空間寸法とする。
3) 取り付けはトラススタップネジ呼び径4×20を使用のこと。
注 記
1) 指定外の寸法公差は表1による。
2) ①印寸法は最小サービス空間寸法とする。
3) 取り付けは、パイントッピンジ呼び径3×16を使用のこと。

NOTE
1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. #: MINIMUM SERVICE CLEARANCE.
3. USE BIND TAPPING SCREWS #3x16 FOR FIXING THE UNIT.
注記
1) 指定外の寸法公差は表1による。
2) #印寸法は最小サービス空間寸法とする。
3) 取り付けはトラススタンピング呼び径4×20を使用のこと。
NOTE
1. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
2. #: MINIMUM SERVICE CLEARANCE.
3. USE TAPPING SCREWS ø4x20 FOR FIXING THE UNIT.

EC Declaration of Conformity

We, FURUNO ELECTRIC CO., LTD.

(Manufacturer)

9-52 Ashihara-Cho, Nishinomiya City, 662-8580, Hyogo, Japan

(Address)

declare under our sole responsibility that the product

BRIDGE NAVIGATIONAL WATCH ALARM SYSTEM BR-500

(Model name, type number)

to which this declaration relates is in conformity with the following standard(s) or other normative document(s)

IEC 60945: Ed.4.0: 2002
IEC 60945: Ed.3.0: 1996, clauses 10.2 and 10.3
IEC 62616: Ed.1.0: 2010
IMO Resolution MSC. 128(75)

(title and/or number and date of issue of the standard(s) or other normative document(s))
