IMPORTANT NOTICES

General

- This manual has been authored with simplified grammar, to meet the needs of international users.
- The operator of this equipment must read and follow the instructions in this manual. Wrong operation or maintenance can void the warranty or cause injury.
- Do not copy any part of this manual without written permission from FURUNO.
- If this manual is lost or worn, contact your dealer about replacement.
- The contents of this manual and the equipment specifications can change without notice.
- The example screens (or illustrations) shown in this manual can be different from the screens you see on your display. The screens you see depend on your system configuration and equipment settings.
- Save this manual for future reference.
- Any modification of the equipment (including software) by persons not authorized by FURUNO will void the warranty.
- The following concern acts as our importer in Europe, as defined in DECISION No 768/2008/EC.
  - Name: FURUNO EUROPE B.V.
  - Address: Ridderhaven 19B, 2984 BT Ridderkerk, The Netherlands
- The following concern acts as our importer in UK, as defined in SI 2016/1025 as amended SI 2019/470.
  - Name: FURUNO (UK) LTD.
  - Address: West Building Penner Road Havant Hampshire PO9 1QY, U.K.
- All brand, product names, trademarks, registered trademarks, and service marks belong to their respective holders.

How to discard this product

Discard this product according to local regulations for the disposal of industrial waste. For disposal in the USA, see the homepage of the Electronics Industries Alliance (http://www.eiae.org/) for the correct method of disposal.

How to discard a used battery

Some FURUNO products have a battery(ies). To see if your product has a battery, see the chapter on Maintenance. If a battery is used, tape the + and - terminals of the battery before disposal to prevent fire, heat generation caused by short circuit.

In the European Union
The crossed-out trash can symbol indicates that all types of batteries must not be discarded in standard trash, or at a trash site. Take the used batteries to a battery collection site according to your national legislation and the Batteries Directive 2006/66/EU.
In the USA
The Mobius loop symbol (three chasing arrows) indicates that Ni-Cd and lead-acid rechargeable batteries must be recycled. Take the used batteries to a battery collection site according to local laws.
In the other countries
There are no international standards for the battery recycle symbol. The number of symbols can increase when the other countries make their own recycle symbols in the future.

⚠ SAFETY INSTRUCTIONS

The operator and installer must read the applicable safety instructions before attempting to operate or install the equipment. Failure to comply with these safety instruction may cause injury, loss of life or damage to the equipment.

⚠ **DANGER**	Indicates a potentially hazardous situation which, if not avoided, will result in death or serious injury.
⚠ **WARNING**	Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
⚠ **CAUTION**	Indicates a potentially hazardous situation which, if not avoided, can result in minor or moderate injury.

⚠ Warning, Caution	🚫 Prohibitive Action	❗ Mandatory Action

Safety instructions for the installer

⚠ WARNING

❗ **Turn off the power at the mains switchboard before beginning the installation.**

Fire, electrical shock or serious injury can result if the power is left on or is applied while the equipment is being installed.

⚠ **ELECTRICAL SHOCK HAZARD Do not open the equipment unless totally familiar with electrical circuits and service manual.**

Only qualified personnel should work inside the equipment.

❗ **Use the specified power cable.**

Fire can result if an incorrect cable is used.

🚫 **Do not disassemble or modify the equipment.**

Fire, electrical shock or serious injury can occur.

🚫 **Do not install the equipment where it may get wet from rain or water splash.**

Water in the equipment can cause fire, electrical shock or damage to the equipment.

CAUTION

⏚ **Ground the equipment to prevent electrical shock and mutual interference.**

❗ **Observe the following safe compass distances to prevent interference to a magnetic compass:**

	Standard compass	Steering compass
Display Unit SC-702	0.50 m	0.30 m
Junction Box SC-701	1.35 m	0.85 m
Antenna Unit SC-703	0.40 m	0.30 m
Antenna Unit SC-1303	0.30 m	0.30 m
Remote Display Unit RD-50	0.45 m	0.30 m
Remote Display Unit RD-20	1.25 m	0.80 m
AC/DC Power Supply PR-240	0.90 m	0.60 m
AC/DC Power Supply PR-241	0.85 m	0.55 m

Safety instructions for the operator

⚠ WARNING

⚠	**ELECTRICAL SHOCK HAZARD** **Do not open the equipment unless totally familiar with electrical circuits and service manual.** Only qualified personnel should work inside the equipment.
🚫	**Do not disassemble or modify the equipment.** Fire, electrical shock or serious injury can occur.
❗	**Turn off the power immediately if water leaks into the equipment or smoke or fire is coming from the equipment.** Failure to turn off the equipment can cause fire or electrical shock. Contact a FURUNO agent for service.
❗	**Use the correct fuse.** A wrong fuse can cause fire or serious damage to the equipment.

CAUTION

❗	**No single navigation aid (including this unit) should ever be relied upon as the exclusive means for navigating your vessel.** The navigator is responsible for checking all aids available to confirm his position. Electronic aids are intended to assist, not replace, the navigator.

WARNING LABEL

A warning label is attached to the Junction Box (SC-701). Do not remove the label.
If the label is missing or damaged, contact a FURUNO agent or dealer about replacement.

⚠ WARNING ⚠
To avoid electrical shock, do not remove cover. No user-serviceable parts inside.
⚠   ⚠
Unit: Junction Box (SC701)
Name: Warning Label (1)
Type: 86-003-1011-3

── About the TFT LCD ──

The TFT LCD is constructed using the latest LCD techniques, and displays 99.99% of its pixels. The remaining 0.01% of the pixels may drop out or blink, however this is not an indication of malfunction.

TABLE OF CONTENTS

FOREWORD

A Word to the Owner of the SC-70/SC-130

FURUNO Electric Company thanks you for purchasing the FURUNO SC-70 or SC-130 Satellite Compass™. We are confident you will discover why the FURUNO name has become synonymous with quality and reliability.

Since 1948, FURUNO Electric Company has enjoyed an enviable reputation for quality and reliability throughout the world. This dedication to excellence is furthered by our extensive global network of agents and dealers.

Your equipment is designed and constructed to meet the rigorous demands of the marine environment. However, no machine can perform its intended function unless properly operated and maintained. Please carefully read and follow the operation and maintenance procedures in this manual.

We would appreciate feedback from you, the end-user, about whether we are achieving our purposes.

Thank you for considering and purchasing FURUNO.

Features

The SC-70/SC-130 is a new Satellite Compass™ designed with FURUNO advanced GPS kinematic technology. This compass has a wide range of applications for both land and sea vessels.

The main features are:

- Meets the requirement for the following regulations: IMO MSC. 116(73), ISO 22090 Ed 2.0, IMO A. 694(17), IEC 60945, ISO 22090 Ed 2.0, IEC 61108-1 Ed 2.0, ISO 20672 Ed 1.0, IEC 61923-1 Ed 1.0, IEC 61923-2 Ed 1.0, IEC 61162-1 Ed 5.0, IEC 61162-2 Ed 1.0, IEC 61162-450 Ed 2.0, IEC 62288 Ed 2.0, IEC 62923-1, IEC 62923-2.
- Can output speed for any set location, allowing monitoring of bow and stern berthing speeds without the use of optional equipment.
- Perfect for use as a heading sensor for RADAR/ARPA, AIS, ECDIS and scanning SONARs.
- There are no mechanical parts such as gimbals or a rotating motor, thus the compass is free from routine maintenance.
- Geomagnetism does not affect the compass performance, making it usable on any vessel.
- No need for speed correction, unlike a gyrocompass.
- Short setting time
- Easily integrated into existing ship-board network via Ethernet.
- Remote Maintenance Service (RMS) ready, allowing hassle-free assistance when in port.
- Can be connected using existing antenna cabling (SC-50/60/110/120 only) by adding the optional conversion kit. Note that existing antennas units must be replaced. (Non-IMO type only)
- Uses multiple satellite types, eliminating the problem of not having enough satellites visible. (Non-IMO type only.)

Software used in this product

This product includes software to be licensed under the GNU General Public License (GPL) version 2.0, GNU Lesser General Public Software License (LGPL) version 2.0, Apache, BSD and others. The program(s) is/are free software(s), and you can copy it and/or redistribute it and/or modify it under the terms of the GPL version 2.0 or LGPL version 2.0 as published by the Free Software Foundation. 1. INSTALLATION

This chapter covers the installation procedure and initial set up procedures and settings for the SC-70 and SC-130 systems.

Note: The settings and procedures outlined in this chapter are for technical personnel and should not be adjusted or changed by the user. If you require a change to any of these settings, contact your dealer.

NOTICE

Do not apply paint, anti-corrosive sealant or contact spray to coating or plastic parts of the equipment.

Those items contain organic solvents that can damage coating and plastic parts, especially plastic connectors.

1.1 How to Install the Antenna Units

General considerations

- Keep the length of the antenna cable in mind when selecting a mounting location.
- Select a location with minimal or no vibration.
- The sensor should be separated more than three meters from Inmarsat F/FB antennas. Select a location outside this transmission area.
- Do not loop the antenna cable or bundle the antenna cable with radio equipment cables. When these noise reductions are insufficient, adjust the squelch on the radio equipment.
- Select a location with obstructions to the radio waves.
- Select a location more than a meter from the floor/deck etc.
- Select a location with no local vibration or impact (including sympathetic vibrations due to engine or mast) for the GPS sensor in the antenna unit.

Installing the antenna above superstructures

It is recommended that the antenna is installed above all other superstructures on the vessel. The antenna can obtain an unobstructed view of the available satellites, regardless of the vessel heading. Failure to install the antenna above all other superstructures can cause shadows and multipath reflection problems.

The following figure shows an example of the antenna installed above all other superstructures.
Installing the antenna below superstructures

Where the antenna is installed below superstructures on the vessel, shadows and multipath problems may occur on at least one heading, and possibly more. To avoid these problems where possible, follow the guidelines in this section.

Note: If the antenna is installed below any superstructure, the installation must be done over a two-day period, following the procedure in the service manual.
At least 12 hours are required to capture tracking data to measure multipath indexes and locate areas of shading.

• The horizontal separation between the antenna and masts must be as shown in the table below and the figure on the following page:

Mast diameter	Minimum separation distance
10 cm	1.5 m
30 cm	3 m

Side view

Top view
• The field of view above the antenna should be as shown in the figure below, ±80° against the zenith. To avoid reflections from masts and other obstacles, locate the antenna well away from shadows of the radar mast, etc.

SC-703 Antenna field of view   SC-1303 field of view.
• Locate the antenna unit above the radar, out of the radar beam.

SC series antenna installed away from radar beam
1.1.1 How to install the SC-703 Antenna Unit

Note 1: Where the installation location is inconvenient for cable connection, connect the cabling (see step 6) before securing the antenna unit to the mounting location.

Note 2: The bird deterrents can be attached to the antenna cover to prevent birds from landing on the cover. If it is more convenient to attach the bird deterrents before securing the antenna unit to the mounting location, do step 6 of the procedure below before fixing the antenna unit.

1. Prepare a mounting platform in accordance with the outline drawing at the back of this manual. If corrosive material is used, take necessary anti-corrosion measures.
    Note: Holes drilled into the mounting platform must be parallel with the fore-aft line of the vessel.

2. Orient the antenna unit to face the bow, referring to the figure below. The antenna should be installed within ±2.5° of the bowline.
    Note: The antenna cable must be routed via the indent at the rear of the base (see the following figure).
3. Secure the unit to the platform with four sets of M10 hex. nuts, spring washers and flat washers (all included as installation materials) with 20 ±2 Nm torque.
    Note 1: Take care not to crush the cabling when mounting the antenna to the platform.
    Note 2: Take care not to cover the breathing hole on the antenna.

4. Coat the exposed parts of the nuts, bolts and washers with the Adhesive TB5211 (included) to prevent corrosion.
5. Connect the SC-703 cable to the cable from the SC-701, then waterproof the connection (see section 1.5.2 for the waterproofing procedure).

6. Remove the double-sided tape from the bird deterrents, then attach to the antenna cover. Coat around the bird deterrents with the Adhesive TB5211 (included).

7. Secure the cables to the mast (or superstructure) with cable ties, at regular intervals.

1.1.2 How to install the SC-1303 Antenna Unit

Note 1: Where the installation location is inconvenient for cable connection, connect the cabling (see step 6) before securing the antenna unit to the mounting location.

Note 2: The bird deterrents can be attached to the antenna cover to prevent birds from landing on the cover. If it is more convenient to attach the bird deterrents before securing the antenna unit to the mounting location, do step 7 before fixing the antenna unit.

1. Prepare a mounting platform in accordance with the outline drawing at the back of this manual. If corrosive material is used, take necessary anti-corrosion measures.
   Note: Holes drilled into the mounting platform must be parallel with the fore-aft line of the vessel.

2. Orient the antenna unit to face the bow, referring to the figure below. The antenna should be installed within ±2.5° of the bowline.
   Note: The antenna cable must be routed via the indent at the rear of the base (see figure on the following page).

Positioning the antenna cable (Stern view)
3. Coat the thread of the hex. bolts with silicone grease.

4. Fasten the unit to the platform with four sets of M10 hex. bolts, spring washers and flat washers with 20 ±2 Nm torque.
   Note: Take care not to crush the cabling when mounting the antenna to the platform.

5. Coat the exposed parts of the nuts, bolts and washers with the Adhesive TB5211 (included) to prevent corrosion.
6. Connect the SC-1303 cable to the cable from the SC-701, then waterproof the connection (see section 1.5.2 for the waterproofing procedure).

1-5

7. Remove the double-sided tape from the bird deterrents, then attach to the antenna cover. Coat around the bird deterrents with the Adhesive TB5211 (included).
8. Secure the cables to the mast (or superstructure) with cable ties, at regular intervals.

1.1.3 How to retrofit from SC-603/SC-1203

For retrofits from the SC-603 or SC-1203, the following attachments must be fabricated and attached to the mounting platform.

For SC-603 retrofits
For SC-1203 retrofits
1.2   How to Install the Junction Box (SC-701)

The junction box can be mounted on the floor, bulkhead, on a desk/console or on the underside of a desk.

Mounting considerations

Select a mounting location, keeping the following points in mind:

• Locate the SC-701 away from heat sources. Heat can build up inside the unit, causing damage to electrical parts.

• Locate the SC-701 away from areas prone to vibrations. The mounting location should have minimal vibrations.

• Locate the SC-701 away from areas prone to water splash and rain.

• Make sure to connect the unit's ground to the ship's ground.

• Leave sufficient space around the unit to allow access for maintenance. See the outline drawings at the back of this manual for the recommended maintenance space.

• A magnetic compass will be affected if the junction box is placed too close to the magnetic compass. Refer to the compass safe distances at the front of this manual when selecting a mounting location.

• The power switch has a small light which lights up when the unit is turned on.

Note 1: For wall/bulkhead mounted junction boxes, the cabling entrance indicated in the figure below must be oriented to face downwards, to avoid water entering the unit.

Note 2: For floor/desk mounted (top or bottom) junction boxes, select a location where water will not reach the cabling entrance indicated in the figure below.
1. Referring to the outline drawing at the back of this manual, drill four pilot holes for the fixing screws.

2. Fasten two self-tapping screws (ϕ20, supplied) at the location for the top fixing holes. Leave approximately 5 mm of thread exposed.

3. Hang the SC-701 on the two screws using the two top fixing holes.

4. Fasten two self-tapping screws (ϕ20, supplied) to the bottom fixing holes.

5. Fasten all screws to secure the SC-701 in place.

1.3 How to Install the Display Unit (SC-702)

The display unit can be installed on a desktop, overhead (bulkhead) or flush mounted in a panel. Install the SC-702 on the chart table or near the helm, referring to the outline drawing at the back of this manual.

Mounting considerations

When selecting a mounting location for the display unit, keep the following in mind:

- Keep the unit out of direct sunlight.
- The temperature and humidity should be moderate and stable.
  (See the specifications at the back of this manual for operating temperatures.)
- Locate the unit away from heat sources, such as exhaust pipes and vents.
- The mounting location should be well ventilated.
- Keep the unit away from areas subject to rain or water splash.
- Install a ship-board earth to the grounding terminal at the rear of the unit.
- Mount the unit where shock and vibration are minimal.
- Keep the unit away from electromagnetic field generating equipment, such as motors and generators.
- Referring to the outline drawings at the back of this manual, leave sufficient space around the unit to allow access for maintenance.
- A magnetic compass will be affected if the unit is placed too close to it. Observe the compass safe distances listed on page ii to prevent magnetic disturbance.
- Leave enough slack in the unit's cabling to allow for maintenance and service.
- **For flush mount installations,** make sure the mounting location is flat.
- To avoid damage to the cabling when mounting the SC-702, make sure the cabling is not excessively bent.

1.3.1 How to install the SC-702 on a desktop or overhead

The display unit is shipped with the hanger, and must removed from the hanger in order to be installed correctly.

1. Place the SC-702 on a firm, flat surface, then unfasten the two knobs on either side of the display unit to remove the unit.

2. Drill four holes for the self-tapping screws (ϕ5x20) at the installation location.

3. Secure the hanger to the desktop or overhead bulkhead with four self-tapping screws (ϕ5×20, included). The hanger should be oriented with the insertion slots facing forwards. For mounting dimensions and required clearance, see the outline drawing at the back of this manual.

Desktop mounted   Roof (bulkhead) mounted

4. Referring to section 1.5.6, connect the cabling to the SC-702.

5. Fit the SC-702 to the hanger and tighten the bolts on either side evenly. Adjust the angle of the SC-702 so the screen can be viewed clearly.

1.3.2   How to flush mount the SC-702

There are two methods for flush mounting the SC-702. You can mount the unit directly onto the mounting area, or use the optional front fixing panel kit.

For both flush mount installation methods, the hanger and knobs are not required. remove the unit from the hanger and discard the hanger and knobs.

Flush mounting the SC-702 (unit only)

1. Cut a hole in the mounting location, using the template at the back of this manual.

2. Drill four holes for the self-tapping screws (ϕ5x20) at the installation location.

3. Place the SC-702 on a firm, flat surface, then unfasten the two knobs on either side of the display unit to remove the unit. The hanger can be disposed.

4. Gently lift the locking tabs at the rear of the front panel, then remove the front panel. Take care not to damage the locking tabs or the front panel.

Rear view of SC-702

Front panel

Lift these locking tabs (8 locations)
5. Fit the F Mount Cushion Kit (code: 20-032-106, included) to the rear of the SC-702 or to the mounting hole.

6. Run the cabling through the cutout, then, referring to section 1.5.6, connect the necessary cabling to the SC-702.

7. Referring to the figure below, fit the SC-702 to the cutout, then use the supplied self-tapping screws (ϕ3×20) to secure the SC-702 to the flush mount panel.

Mounting hole

F Mount Cushion

SC-702

Front panel

Self-tapping screws (ø3×20, 4 pcs)
8. Re-fit the front panel that was removed at step 4.

Note: To remove the SC-702 from the mounting location, use the panel remover (FP19-01201, included).

① Insert

② Pull tab outwards
Flush mounting the SC-702 (with optional F Mount Panel)

Use the optional kit (OP24-35), referring to the outline drawings at the back of this manual and the installation instructions (C42-01310) included with the optional kit.

1.4   How to Install the Remote Display Unit (option)

The RD-50/RD-20 can be connected as a ROTI (Rate Of Turn Indicator) display unit.

For installation instructions regarding the RD-50 or RD-20, see the appropriate operator's manual (RD-50: OME-44530-x, RD20: OME-44540-x; x denotes the manual version), included with your Remote Display.

Note: If your vessel is required to be ROTI type-test compliant, use the RD-50.

1.5   Wiring

This section covers general wiring. For further details see the interconnection diagram at the back of this manual.
*: Attach **the supplied modular connector** to **the supplied LAN cable**. Do not use a commercial STP cable (LAN cable) or connector due to their low durability. See "Mounting considerations" on page 1-8 for how to attach the modular plug. Also, when using the optional LAN CONV KIT, use the existing cables.

1-11

1.5.1 How to fabricate the cables

<u>LAN cable</u>

Note 1: When fabricating the LAN cable for connection to the antenna unit, remove the locking nut on the antenna base, then pass **the supplied LAN cable** through the cable entrance before fitting **the supplied modular plug** on the both ends.
 • Modular plug for the junction box: MPS588-C
 • Modular plug for the antenna unit: FRU-RJ-PLUG-ASSY
Secure to attach the shield (folded area) of the LAN cable to the chassis of the modular plug (see the following step 6). Then fit the locking nut on the LAN cable.

Note 2: This equipment only uses straight cables.

Cable jacket   Armor   Approx. 280 mm
                    80
Expose the inner and outer sheaths as shown to the left.

Inner vinyl sheath

Outer vinyl sheath

Cover the cable jacket at the cut as shown to the left.

Wrap vinyl tape. (width: 20 mm)

1

Expose inner vinyl sheath.

2

25 mm

Remove the inner vinyl sheath by approx. 25 mm. Be careful not to damage inner shield and cores.

3
approx. 9 mm

Fold back the shield, wrap it onto the inner vinyl sheath and cut it, leaving approx. 9 mm.

4
approx. 9 mm

Fold back drain wire and cut it, leaving approx. 9 mm.

5
approx. 11 mm

Straighten and flatten the cores in colored order and cut them, leaving approx. 11 mm.

6
Drain wire

Insert the cable into the modular plug so that the folded part of the shield enters into the plug housing. The drain wire should be located on the tab side of the jack.

7

Using special crimping tool MPT5-8AS (PANDUIT CORP.), crimp the modular plug. Finally, check the plug visually.

Modular plug

The supplied cable (Z-#26X2P+0.3SQX1PL10/30) does not have the armor.
Measurements are displayed in mm

Unit	L1	L2	L3	A
Junction Box	*	80	80	6
Display Unit	130	80	50	6

*: Length depends on installation configuration. When fabricating this cable, ensure enough slack is left to allow easy access for maintenance and service.

Note: L2 lengths displayed in the table above are the minimum recommended length. Adjust the length according to the installation configuration.

Power cable DPYC-1.5
1.5.2 How to secure and waterproof the cable connections

All cable connections not inside the equipment, whether exposed to weather or otherwise, should be waterproofed and secured after making the connection.

To waterproof and secure each connection, refer to the procedure outlined below.

Securing and waterproofing connections

1) Wrap the connection with self-vulcanizing tape.

Self-vulcanizing tape

2) Wrap a second layer of self-vulcanizing tape in the opposite direction.

Self-vulcanizing tape
3) Wrap vinyl tape over the self-vulcanizing tape.
Vinyl tape

4) Wrap a second layer of vinyl tape in the opposite direction.

Vinyl tape
Securing and protecting unused cable connectors

1) Cover the loose end of the cable connector with self-vulcanizing tape.

Self-vulcanizing tape
2) Wrap the connector with a layer of vulcanizing tape, covering approx. 50 mm of the connected cable. Confirm that the connector is covered.

50 mm

Self-vulcanizing tape
3) Wrap vinyl tape over the self-vulcanizing tape.

Vinyl tape

4) Wrap the connector with a layer of vinyl tape. Bind the tape end with a cable tie to prevent the tape from unraveling.

Cable tie   Vinyl tape
1.5.3   How to fabricate the WAGO connectors

Follow the procedure outlined below to fabricate the WAGO terminal connections.
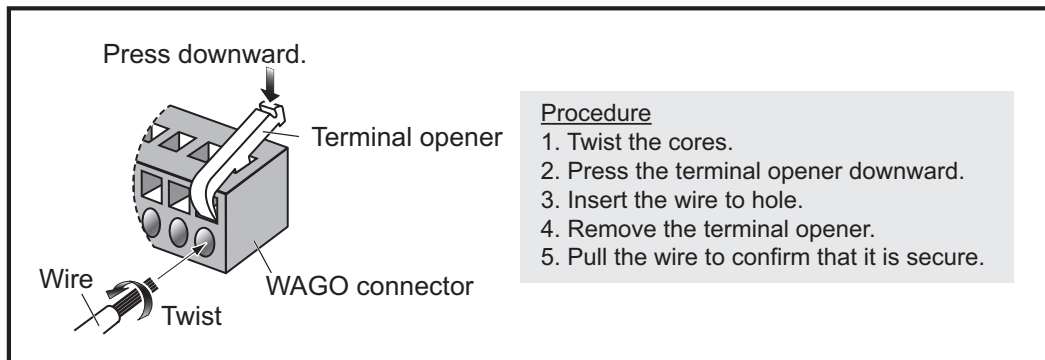

Note: Two terminal openers are included inside the SC-701. Check that the size of the opener is correct before use.

- Small opener (labeled as "DISP"): For use on connectors for cabling between the SC-702 and SC-701.
- Large opener: For use on the connectors inside the SC-701.

1.5.4   How to connect the Antenna Unit (SC-703/SC-1303)

Connect the LAN cable (included as installation materials; see table below) from the antenna LAN port to the J3 terminal inside the SC-701.

Installation materials type	LAN cable		Installation materials type	LAN cable	
	Length	Armor		Length	Armor
CP20-04300*	30 m	Yes	CP20-04500	10 m	Yes
CP20-04310*	40 m	Yes	CP20-04510	15 m	Yes
CP20-04320*	50 m	Yes	CP20-04520*	10 m	No
CP20-04340	30 m	No	CP20-04530*	15 m	No
CP20-04360*	30 m	No	CP20-04540	10 m	No
CP20-04370*	10 m	Yes	CP20-04550	15 m	No
CP20-04380*	15 m	Yes	—		

How to fit the waterproof connector

Follow the procedure below to fit the waterproof connector (included in installation materials marked with "*" in the above table).

Waterproof connector components

Sealing nut   Clip   Sealing   Nut   Housing   RJ plug   Washer

1-15
1. Referring to the figure below, fit the connector components to the LAN cable. Strip approximately 10 mm of the outer sheath to expose the cores, then fold the drain wire back, along the cable.
2. Insert the cable cores into the RJ plug, then secure the cores using a crimping tool (MPT5-8AS, or equivalent, local supply). Make sure the RJ plug is in contact with the drain wire.

3. Push the RJ plug into the housing. Make sure the RJ plug is aligned with the housing guides, then fit the nut, sealing, clip and sealing nut, in order.
4. Fasten the sealing nut until the thread on the housing is not visible. Fastening torque: 0.72 to 0.98 N•m.
5. Fit the washer to the RJ connector, making sure that the indents on the washer match the indents on the connector.

6. Connect the assembled waterproof connector to the LAN cable on the antenna.

7. Use self-vulcanizing tape and vinyl tape to additionally waterproof the connection. For details on waterproofing cable connections, see section 1.5.2.

Retrofits - Coaxial cable connection

You can use the existing coaxial cable for connection. In this case, the optional LAN_CNV kits (OP20-47 and OP20-48) are required.

Cable connection:

For cable connection, use one of the three existing coaxial cables. Connect both ends of the cable, one end to the antenna unit, the other end to the junction box. Secure and protect the connection points of the coaxial cables, referring to subsection 1.5.2.

For unused existing coaxial cables, secure and protect both ends of the coaxial cables, referring to subsection 1.5.2.

Secure and protect the joint of TNC connectors.

| Antenna Unit | Coaxial cable (existing) | Junction Box |
1.5.5 How to connect the Junction Box (SC-701)

The Junction Box (SC-701) has two rows of cable entrances for connection. The following figure and table show the internal connection points for the SC-701 and the recommended cable entrance for each connection (based on a configuration which uses all connections). The tables on the following pages show the pin connections for each WAGO connector.

J4: LAN_CONV assy.
(For L-type or when using OP20-47)

Power cable entrance

Ground terminal
How to secure the LAN connectors

The securing plate is preattached to the LAN port. Detach the securing plate to connect the LAN cables, then reattach the plate after connecting the LAN cables.

The securing plate prevents communication error between the Junction Box and the Antenna Unit that is caused by the vibration. Be sure to attach the securing plate after connecting the LAN cables.

Securing plate
Note 1: LAN cable recommended entrances should be used to prevent undue stress to the LAN cables. The power and DISP cable must be passed through their recommended entrance to prevent damaged to the cabling.

Note 2: Cable entrances 1 though 8 are protected from foreign materials with a small plastic spacer. To use one these cable entrances, remove the spacer, then pass the cable through.

The following table indicates the recommended cable entrance, connector number and the cable type required for connections to the SC-701.

External connection	Recommended entrance	Connector No.	Cable type
Power	Power cable entrance only	TB1	(JIS) DPYC-1.5
Shipboard network (AMS, etc.) (IEC61162-450)	1, 2 or 9	J1	(JIS) FR-FTPC-CY
Antenna unit (SC-703 or SC-1303)	9	J3	LAN
	10 or 11	LAN-Coaxial conversion kit	Existing coaxial.
AD-10 format data output	3 or 10	TB8 or TB9	(JIS) TTYCSLA-1Q
NMEA0183 (IEC61162-2)	3 or 10	TB7	(JIS) TTYCSLA-4
NMEA0183 (IEC61161-1)	4, 5, 6, 7 or 11, 12, 13, 14	TB3 to TB6	(JIS) TTYCSLA-1 or TTYCSLA-1Q
Display unit (SC-702)	15 only	TB2	(JIS) TTYCSLA-4
NMEA2000	4, 5, 6, 7 or 11, 12, 13, 14	TB10	M12-05BFFM** ("**" indicates length)
USB Flash Memory*	-	USB port	-

*: To remove the USB Flash Memory, see "How to remove the USB Flash Memory" on page 4-4.

Note: For (JIS) cable equivalents, see the JIS cable guide at the back of this manual.

1.5.6   How to connect the Display unit (SC-702)

The display unit is connected to the Junction Box using a 9-pin WAGO connector. Referring to section 1.5.3 and the table below, fabricate the WAGO connector. Note that the WAGO connector is included inside the SC-702 and must first be removed from the unit.

1. Unfasten the four screws on the rear cable clamp of the SC-702, then remove the cable clamp to reveal the WAGO connector.

2. Unplug the WAGO connector from the SC-702.
3. Pass the cable through the cable clamp.
    For the supplied cable (Z-#26X2P+0.3SQX1PL)
    When the supplied cable is used, the supplied cable gasket (Type: 20-037-2104-0) must be attached. Open the cut line of the cable gasket then attach the cable gasket to the cable.
    Note: To prevent water intrusion, the cut line of the cable gasket must face downward.

Cable gasket

Cut line
4. Referring to the following table and the interconnection diagram at the back of this manual, connect the cable to the WAGO connector.
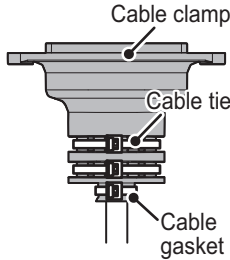

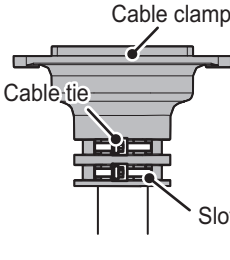

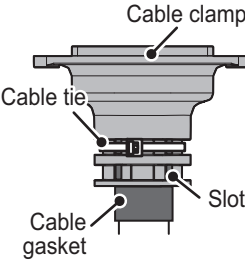

Display unit (SC-702) internal J301 WAGO connector (9-pin, TTYCSLA-4)

Pin no.	Connection (signal)	Description	Remarks
1	P12V	Power	-
2	GND	Grounding. Connect to SC-701.	-
3			-
4			-
5	TD_A	TX data	Fixed at 115200 bps.
6	TD_B	TX data	
7	RD_A	RX data	
8	RD_B	RX data	
9	GND	Drain wire	Connect to drain wire.

5. Connect the cabling to the SC-702.

6. Slide the clamp along the cable towards the SC-702, then fasten the four screws which were removed at step 1.

7. Secure the cable to the cable clamp, referring to the figure below.

Top view of cable clamp

Supplied cable (Z-#26X2P+0.3SQX1PL)	Equivalent cable for JIS cable (TTYCSLA-4)	
	Without Water Proof Kit	With Water Proof Kit
With three cable ties	With two cable ties	With a single cable tie
Secure the cable gasket also with a cable tie.	Wind cable ties through the slots.	Wind a cable tie outside of the cable clamp.

Note: In cases where the WAGO connector is connected to the cable before the cable is passed through the cable clamp, the cable clamp can be adjusted to allow connection. Adjusting the cable clamp as outlined in the figure below voids the IPx5 water-proof rating of the clamp and the unit.

Cut along "V"-shaped indent using a wire cutter or similar tool.

Slide the clamp over the cable.
To keep the IPx5 rating, remove the WAGO connector, then repeat the procedure above.

How to fit the optional waterproofing kit (OP05-139)

The optional waterproofing kit must be fitted at the same time as the cabling is connected to the SC-702.

Note: To satisfy the requirements for IPX5 waterproof rating, the cable used must have a diameter of 14.4 mm (±0.4 mm).

1. Unfasten the four screws on the rear cable clamp, then remove the cable clamp to reveal the WAGO connector.

2. Fit the cable gasket to the cable clamp, referring to the figure below.

1. Fit the cable gasket to the cable clamp, passing the fixing lip partially through the cable clamp.

Fixing lip

Cable clamp   Cable gasket

2. To pass the fixing lip completely through the cable gasket, twist the cable gasket gently.
3. Check that the cable gasket is flush against the cable clamp, as shown below.

4. Check that the cable gasket's fixing lip is flush against the inside of the cable clamp.

WAGO lever

Fixing lip
3. Pass the cabling through the cable gasket and cable clamp.

4. Fit the cover gasket (rubber seal) to the rear of the SC-702. Make sure the rubber seal is placed inside the groove indicated in the figure below.

Groove for rubber seal
5. Connect the cabling to the SC-702, referring to section 1.5.6.

6. Slide the cable clamp along the cable until the clamp is flush against the rear of the SC-702.
   Note: The cable clamp must be oriented with the dome facing upwards in order to retain it's waterproofing rating.

7. Fasten the four screws removed at step 1.

8. Secure the cables to the cable clamp with cable ties.

1.5.7   How to connect the Remote Display Unit (option)

Connect the RD-50 to the SC-70/SC-130 referring to the connection diagram below.

RD-50 connection
(For details, see the RD-50 Operator's Manual OME-44530)

Remote display RD-50
RD-20 Connection
(For details, see the RD-20 Operator's Manual OME-44540)
1.6   Initial Settings

The initial setup for your SC-70/SC-130 requires the system to be powered. Referring to the instructions at section 2.2, turn the power on.

For the sake of brevity, the following terminology is used.

Terminology	Meaning
"Select"	Example: "Select [SENSOR], then press the **ENT** key." Use the Cursorpad to select the menu item.
"Open the [MENU]."	Press the **MENU ESC** key; this opens the [MENU].
"Close the [MENU]."	• Press the **MENU ESC** key; this closes the [MENU] and returns to the last used display screen or sub-screen. • Press the **DISP** key; this closes the [MENU] and returns to the main screen.
IMO type	SC-70 or SC-130 systems which have been assigned as [MERCHANT] at installation and installed on vessels which meet the applicable IMO standards.
Non-IMO type	SC-70 or SC-130 systems which have been assigned as [FISHING] at installation and installed on vessels which do not meet the applicable IMO standards.
INTERNATIONAL	[TYPE APPROVAL] setting for international vessels other than Russia.
RUSSIA	[TYPE APPROVAL] setting for Russian vessels.

When the unit is powered for the first time, it is in a "cold start" state. There is no satellite data (almanac data) stored. In this state, the unit searches for, and stores, satellites to find its heading. This process takes approximately 90 seconds. If the heading is not found within 30 minutes, the antenna installation location may not be suitable. A lack of visible satellites (less than five) can also prevent the unit from finding a heading. Resolve the problem, then re-check the tracking status.

If the heading error is between 5° and 10°, adjust the antenna unit orientation while monitoring the heading indication on the SC-702.

Once a heading has been found, the following items may need setting or adjustment:

- Vessel dimensions.
- Antenna location.
- Offset heading, roll, pitch, heave, etc.
- Main device mode.
- Password (as necessary).
- Alert mode.
- Legacy sentence input.
- I/O menu settings as appropriate. (See section 1.8.)

Note: Some settings are set at installation and are non-selectable (gray in color) from the menu. These settings require password input. Password input is not covered in the setting procedures for these items. To adjust these settings, contact your dealer.

1.6.1 Main menu

How to access the menu

The menu is locked with a password. Press the **MENU ESC** key to show the password input window (shown below-right).

If this is the first time the unit has been turned on, the password is not set at default. Press the **ENT** key to access the menu. It is recommended to set a new password in this case.

If the unit has a previously set password, input the password, then press the **ENT** key to access the menu.

Note 1: Password input is required to access the menu each time the unit is turned off, then on again.

Note 2: The menu closes automatically if no keys are pressed within one minute.

How to change/set the password

1. Open the [MENU].
2. Select [SYSTEM], then press the **ENT** key.
3. Select [PASSWORD], then press the **ENT** key.
4. Select [CHANGE], then press the **ENT** key. An input window appears.
   The currently selected input box is indicated with a small arrow to the left-side of the input box, as shown in the figure to the right.
   To set the password for the first time, press the **ENT** key to select the [NEW PASSWORD] input box, then skip to step 6.
5. Enter the current user password. If the password is incorrect, the input window is reset to blank. If the password is correct, the arrow indication moves to the [NEW PASSWORD] input box.
6. Enter a new password, then press the **ENT** key. The arrow indication moves to the [NEW PASSWORD (CONFIRM)] input box.
7. Enter the new password again, then press the **ENT** key. If the passwords match, the [CHANGE PASSWORD] input window disappears.
   If the passwords do not match, the input boxes for [NEW PASSWORD] and [NEW PASSWORD (CONFIRM)] are reset and the arrow indication returns to the [NEW PASSWORD] box. Repeat the procedure from step 6.
8. Close the [MENU].
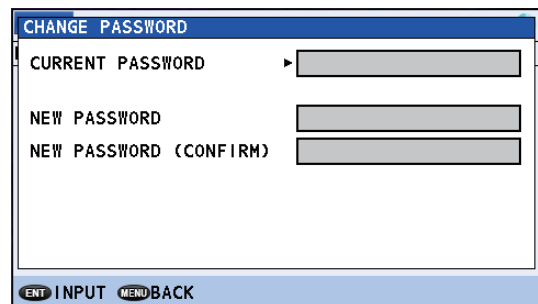

1-25

How to disable access to the menu

Where necessary, you can disable menu access by doing the following:

1. Open the [MENU].
2. Select [SYSTEM], then press the **ENT** key.
3. Select [PASSWORD], then press the **ENT** key.
4. Select [LOGOUT], then press the **ENT** key. The menu closes.

1.6.2 How to set vessel dimensions, antenna location and CCRP

Note: Access to the [OFFSET] menu requires the [SERVICE] menu to be unlocked. To unlock the service menu, consult your local dealer.

1. Open the [MENU].
2. Select [SENSOR], then press the **ENT** key.
3. Select [OFFSET], press the **ENT** key.
4. Select [DIMENSIONS/CCRP], then press the **ENT** key. The settings window appears. The figure below is an example of the settings window.
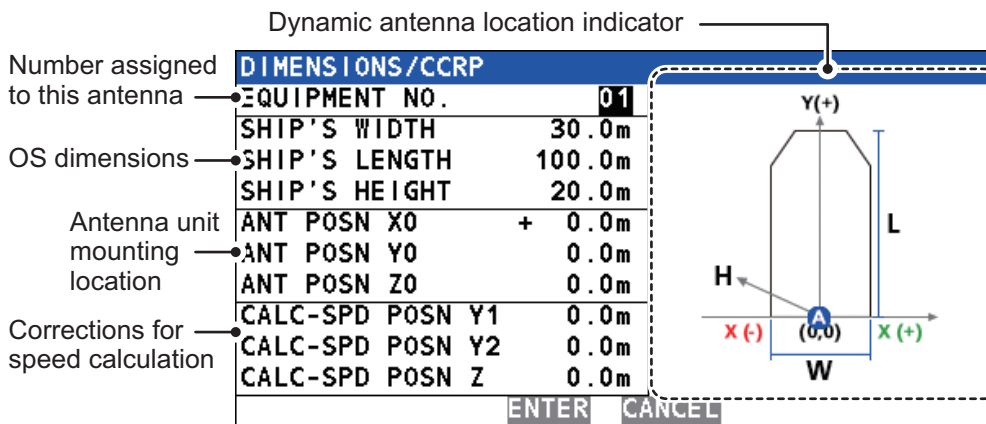

5. Select [EQUIPMENT NO.], then press the **ENT** key. The [INPUT EQUIPMENT NO.] pop up window appears.
6. Set the antenna number you wish to set the location for.
7. Select [ENTER], at the bottom of the pop up window, then press the **ENT** key. The antenna selected here is used to output the POS sentence to external equipment.
8. Select [SHIP'S WIDTH], then press the **ENT** key. A numerical pop up window appears. Referring to the figure above, set the dimensions of the vessel.
9. Set [SHIP'S LENGTH] and [SHIP'S HEIGHT] in a similar manner.
    Note: [SHIP'S HEIGHT] is from the keel to the mast top.
10. Referring to the table below, set the antenna mounting position (CCRP) and the speed calculation adjustments.
    Note: These settings require CCRP and ship dimensions. Do step 5 and step 6 before changing these settings.

Indication	Description	Setting range
[ANT POSN X0]	Port-starboard location of antenna unit. Enter a negative value for port-side, positive value for starboard-side. The center of the vessel is [0 m].	- ([SHIP'S WIDTH]/2) to + ([SHIP'S WIDTH]/2). For example, if the [SHIP'S WIDTH] is set to [100 m], the range is [-50 m] to [+50 m].
[ANT POSN Y0]	Bow-stern location of the antenna unit. Calculated from the center of the stern.	[0.0 m] to [SHIP'S LENGTH]. For example, if [SHIP'S LENGTH] is set to [45 m], the maximum range for this setting is also [45 m].
[ANT POSN Z0]	Height of antenna unit location, from the bottom of the ship.	[0.0 m] to [99.9 m]
[CALC-SPD POSN Y1]*	Set the bow-stern position for calculating the 3-axis speed. Ship's speed can be measured at two locations in addition to the antenna position. En-ter the backward distance from the reference position (Fwd Center of the bow) to the position where you want to measure the ship's speed. Normally, keep the default settings. **Note:** The value for [CALC-SPD-Y1] is set to 0 m as default. [CALC-SPD-Y2] is automatically set to the ship's length (set previously, in the same menu). For most vessels, these two settings do not require adjustment. On large vessels, where speed and location is required at numerous points for situations such as docking, these two values should be adjusted as required. For all vessels, [CALC-SPD-Z] should be set to the vessel's draft value. For further information, contact your local FURUNO dealer.	[0.0 m] to [SHIP'S LENGTH]. For example, if [SHIP'S LENGTH] is set to [45 m], the maximum range for this setting is also [45 m].
[CALC-SPD POSN Y2]*		[0.0 m] to [SHIP'S LENGTH]. For example, if [SHIP'S LENGTH] is set to [45 m], the maximum range for this setting is also [45 m].s
[CALC-SPD POSN Z]*	Set the height for calculating the 3-axis speed. Enter the distance from the bottom of the ship to the position where you want to measure the ship's speed. For example, enter the draft value when you want to measure the speed at draft position.	[0.0 m] to [ANT POS Z0].

*: These settings are required in order to display correct data on the SPD display. See section 2.10.

11. To apply the settings, select [ENTER], then press the **ENT** key.
To discard the changes and start again, select [CANCEL], then press the **ENT** key.

12. Close the [MENU].

1.6.3 How to apply offsets for heading/pitch/heave/roll/position

Note: Access to the [OFFSET] menu requires the [SERVICE] menu to be unlocked. To unlock the service menu, consult your local dealer.

1. Open the [MENU].
2. Select [SENSOR], then press the **ENT** key.
3. Select [OFFSET], then press the **ENT** key.
4. Referring to the table below, select the appropriate item to offset, then press the **ENT** key.

Menu item	Description	Offset range
HDG OFFSET	Offset the heading.	-180° to +180°
PITCH OFFSET	Offset to compensate for pitch.	-10°000 to +10°000
ROLL OFFSET	Offset to compensate for roll.	
POSITION OFFSET	Offset the Own Ship position.	North/South: 00.0000' to 59.9999' East/West: 00.0000' to 59.9999'
DIMENSIONS/CCRP	Set the ship size, location of the antenna and CCRP.	See section 1.6.2.
SOG OFFSET	Offset the SOG.	-12.5% to +12.5%
ATM OFFSET	Offset atmospheric pressure.	-99.9 hPa to +99.9 hPa
TEMP OFFSET	Offset the temperature. **Note:** The displayed temperature appears lower than the actual temperature immediately after the power is turned on. It takes approximately one hour for the equipment to display the correct temperature in a stable manner.	-99.9°C to +99.9°C

5. Use the arrows key to set the offset, then press the **ENT** key.
6. Close the [MENU].

1.6.4 How to set the heave output delay

To use the heaving compensation on external equipment, the SC-70/SC-130 must output the heave data to the external equipment. Do as follows to output heave data.

Note: Access to the [HEAVE OUTPUT DELAY] menu requires the [SERVICE] menu to be unlocked. To unlock the service menu, consult your local dealer.

1. Open the [MENU].
2. Select [SERVICE], then press the **ENT** key.

3. Select [HEAVE OUTPUT DELAY], then press the **ENT** key.

4. Select [ON] or [OFF] as appropriate, then press the **ENT** key.
   To output the heave data to the external equipment, select [ON].

5. When [ON] is selected, confirm that the delay time setting is "050 ms", then select [ENTER]. When [OFF] is selected, go to the next step.
   Keep the default delay time setting (50 ms).
   When you change the setting for [HEAVE OUTPUT DELAY], the following confirmation message appears.

   ```
   THIS CHANGE REQUIRES RESTART.
          ARE YOU SURE?
             YES  NO
   ```
6. Select [YES], then press the **ENT** key.
   The following message appears and the system is restarted automatically.

   ```
   PLEASE WAIT FOR RESTART.
   ```

1.7 How to Access and Use the [SERVICE] Menu

Menu items which require service level access are shown in gray. A password, obtained from FURUNO, is required to access the [SERVICE] menu. Several initial settings must be done from this menu to complete the setup of your SC-70 or SC-130. To adjust or change any of these settings, consult your local dealer.

1.8 I/O Menu Settings

To set which data to output to external equipment from the SC-70/ SC-130, see section 2.15.

1.9   Initial Settings for the Remote Display

After wiring is complete for all units in the configuration, setup the [ROTI Display] as follows. The RD-50 requires menu setup.

For detailed operational guidance for either Remote Display unit, see the appropriate Operator's Manual (RD-50: OME-44530-x, RD:20: OME-44540-x: "x" denotes version).

How to setup the RD-50 for ROTI display.

1. Open the [SERVICE] menu for the RD-50.

```
UNIT Name          : RD-50
Serial No          : 6408-XXXX
PWB No             : 26P0006-XX
Remote Dimmer      : Main
Depth Select       : Auto
Depth Position     : Single
L/L Digit          : 4digit
Without Checksum   : Disable
I/O Port
  Port1            : 4800
  SIO Monitor
Sensor Out         : ON
Device Mode        : Normal
LCD RESET
SIM                : OFF
Service RESET

[▲]/[▼] : Select
[ENT]  : Enter
```

XXXX: Serial number
XX: Program version number

2. Select [Device Mode], then press the **ENT** key.
    Note: Do not change the settings for any other items in the [SYSTEM] menu for the RD-50.

3. Select [ROTI], then press the **ENT** key.

4. Press the **PWR** key to close the menu and turn off the power. When the power is next turned on, your RD-50 shows the [ROTI Display] from the SC-70/SC-130.

How to setup the RD-20 for ROTI display

Press the **DISP** key on the RD-20 to show the ROTI display.

2. OPERATION

2.1 Controls Overview

No.	Key	Description
1	**BRILL**	• Opens the [BRILL SETTING] window. • With the BRILL SETTING window open, adjusts the screen brilliance.
2	**DISP**	• With the menu open: Close the menu and return to the last used display mode's main screen. • Without the menu open: Change the display mode.
3	**MENU ESC**	Short press: • Open the main menu. • Close the menu and return to the last used screen. • Close settings pop up window and return to the last used menu. Long press: • Opens the [ALERT LIST].
4	**ACK**	• Acknowledge an individual alert and close the alert pop up message.
5	**LIST**	• Show the [LIST] display. • Cycle through the [LIST] display.
6	**ENT**	• Open a menu item. • Confirm selected setting in pop up window. • Switch between graphic and main display for the current device mode. • From the SPD main screen: Long press to reset track (for non-IMO types only).
7	Cursorpad	• Navigate menus. ◀ button: Go back one layer in the menu. ▶ button: Open the selected menu item. ▲ button: Move selection cursor to the item above the current selection. ▼ button: Move selection cursor to the item below the current selection. • Adjust settings. ◀ button: Move cursor to the left. ▶ button: Move cursor to the right. ▲ button: Increase the value of the selected item. ▼ button: Decrease the value of the selected item. • With [INTEGRITY] screen shown: scroll through the displayed data when more than one screen is available.

2.2 How to Turn the Power On/Off

The power is turned on or off from the Junction Box (SC-701). Turn the SC-701 on/off to turn the SC-702 on/off.

The startup screen appears for five seconds, then the system starts a diagnostic test. The diagnostic test takes approximately 30 seconds to complete. After the diagnostic test is complete, the main screen appears. You can also bypass the diagnostic test and show the main screen at any time during the test, my pressing any key.

Note 1: If the startup process has one or more errors, the message "COMMUNICA-TION ERROR" appears at the bottom of the diagnostic test screen.

Note 2: The display may appear "sluggish" if the ambient temperature is low.

Note 3: Viewable angles may vary between daylight and nighttime.

Startup/initialize screen.
Shown for approximately
five seconds.
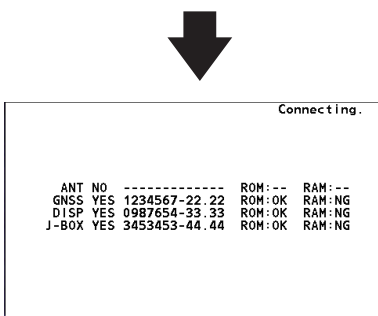

Self-test screen.
Shown for approximately 30 seconds.
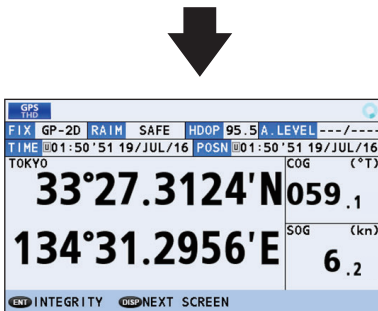

Main screen.

For IMO type vessels: The preset
[DEVICE MODE]* screen appears.
For non-IMO vessels: The last used
screen appears.

*: The [DEVICE MODE] is set at installation.
To change this setting, consult your local dealer.

2.3 How to Adjust the Brilliance, Change the Background Color

The display unit (SC-702) has brilliance (brightness) controls for the screen and the key panel.

2.3.1 How to adjust the screen and key panel brilliance

To change the brilliance, do the following:

1. Press the **BRILL** key. The brilliance pop up window appears.

```
BRILL SETTING
   DISPLAY        17
◀-▐████████████▌+▶
   PANEL          17
▼-▐████████████▌+▲
DISP WHITE/BLACK
ENT CLOSE
```
Note: The pop up window automatically disappears if there is no operation detected.

2. Press ◀ to reduce, or ▶ to increase, the display brilliance.

3. Press ▼ to reduce, or ▲ to increase, the key panel brilliance.

4. Press the **ENT** key to close the pop up window.

The factory default settings and setting range for brilliance are listed in the table below.

Display	Panel
Setting range: [1] to [17]	Setting Range: [0] to [17]
White background default: [14]	White background default: [10]
Black background default: [6]	Black background default: [10]

Note: The brilliance default setting for RD-50/RD-20 is [9], and the setting range is [0] to [9]. See the operator's manual (RD-50: OME-44530-x, RD:20: OME-44540-x; "x" denotes version) for details.

2.3.2 How to change the background and text color

1. Press the **BRILL** key to show the brilliance pop up window.

2. Press the **DISP** key to alternate background/text color.
White background   Black background

3. Press the **ENT** key to close the pop up window.

The background color can also be changed from the menu, see section 2.13.1.

2.4 Menu Overview

The main menu can be password protected. For information on how to access and operate the main menu, see section 1.6.1.

For the sake of brevity, the following terminology is used in this manual:

Terminology	Meaning
"Select"	Example: "Select [SENSOR], then press the **ENT** key." Use the Cursorpad to select the menu item.
"Open the [MENU]."	Press the **MENU ESC** key; this opens the [MENU].
"Close the [MENU]."	• Press the **MENU ESC** key; this closes the [MENU] and returns to the last used display screen or sub-screen. • Press the **DISP** key; this closes the [MENU] and returns to the main screen.
IMO type	SC-70 or SC-130 systems which have been assigned as [MERCHANT] at installation and installed on vessels which meet the applicable IMO standards.
Non-IMO type	SC-70 or SC-130 systems which have been assigned as [FISHING] at installation and installed on vessels which do not meet the applicable IMO standards.
INTERNATIONAL	[TYPE APPROVAL] setting for international vessels other than Russia.
RUSSIA	[TYPE APPROVAL] setting for Russian vessels.

Note: The default operation mode for the SC-70/SC-130 is [MERCHANT] (IMO compliant). [FISHING] is not compliant with the IMO regulations and must not be used for vessels which are required to be IMO compliant. To change the operation mode, consult your local dealer.

1. Press the **MENU ESC** key to open the menu.
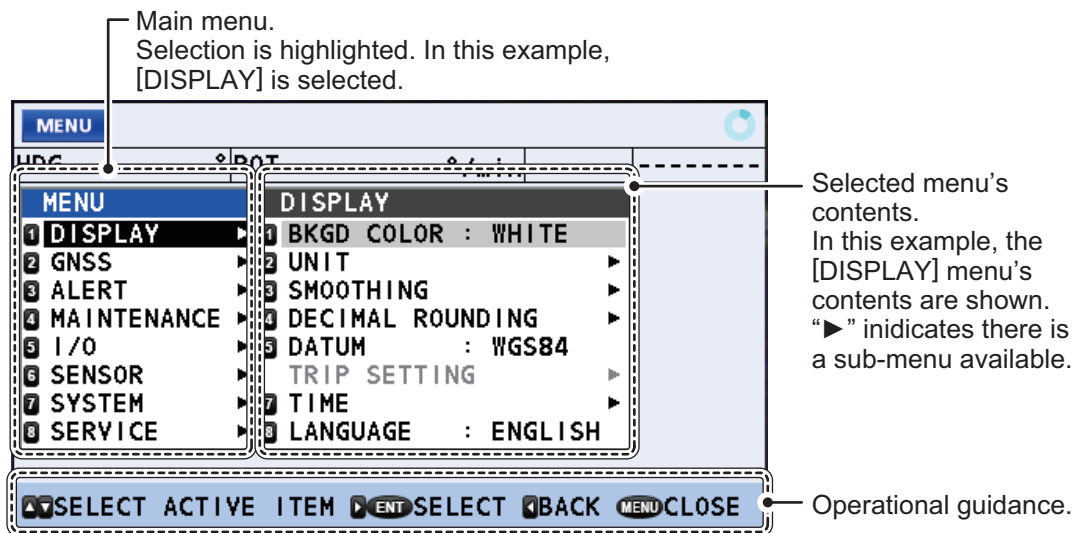

2. Press ▲ or ▼ to select a menu item, then press the **ENT** key.
   "▶" next to a menu item indicates that there is a sub-menu available.

3. Press the **MENU ESC** key to close the menu.

2.5   LIST Screens Overview

LIST display mode shows the [ACTIVE ALERT] list, [ALERT LOG] and [DEVICE LIST] in cyclic order with the display mode currently in use.

Press the **LIST** key to cycle through the lists in the order shown below. Press and hold the **LIST** key to cycle through the lists in reverse order.

Main screen ➜ [ALERT LIST] ➜ [ALERT LOG] ➜ [DEVICE LIST]

2.6   Display Modes Overview

The available display modes are GPS, THD, ROTI and SPD.

Note: The SPD display mode is available only for non-IMO compliant vessels. If the device mode is changed to [MERCHANT] and the SPD display mode is in use, it is automatically changed to the THD display mode. Consult your local dealer for details.

How to change the display mode

Press the **DISP** key to cycle through the display modes. The order in which the display modes are shown is: GPS → THD → ROTI → SPD → GPS...

Note: Some display modes may not be available, depending on vessel configuration. The figures below shows all four available display modes.

GPS mode

THD mode

SPD mode*

ROTI mode

*: Non-IMO type only
2.6.1 Icons and indications

The top section of all device modes displays various icons and the operational status icon is always displayed. The example figure below shows all icons, along with a brief description.

No.	Description
1	Indicates the displayed screen.
	Display mode icon: (Two-tier) **SPD GPS** — Current display mode / Preset [DEVICE MODE] (Startup screen)
	Display mode icon: (Single-tier) **THD** — Indication appears on one line when the currently selected screen matches the preset [DEVICE MODE].
	LIST screen: **LIST**
	MENU screen: **MENU**
2	Precision indicator - displayed when five or more satellites are available for position fixing.
3	GNSS core number - shown for non IMO-types only. Shown only when GNSS core 1 is faulty; the substituted core number is shown here.
4	Simulation mode indicator. Shown only when the system is in simulation mode.
5	Excessive vibration icon - displayed when the antenna location is subjected to excessive vibration.
6	Operational status indicator - rotates in a clockwise direction when the system is operating normally. If this indicator does not move for more than 30 seconds, restart the equipment. For Non IMO-types, this icon is displayed in a light-blue color. For IMO-types, this icon is displayed in a dark blue color.

Alerts and operational guidance

The bottom section of the screen for all device display modes shows operational guidance and alerts.

Alerts take priority over guidance and must be acknowledged before normal operational guidance can be displayed again.

Operational guidance

Alert message (flashing)

2.7 GPS Display Mode

The GPS display mode has three display screens. Press the **ENT** key to cycle through the screens in the following order: Main screen → INTERGITY → BEACON/TYPE 16 MESSAGE → main screen...

2.7.1 GPS coordinates screen (main screen)

The GPS main screen shows own position, COG, SOG and other important GPS information.

No.	Indication	Description
1	[FIX]	Current position fixing method (GP-3D, GP-D3D, etc.)
2	[RAIM]	Current RAIM status. • SAFE: GPS signal is normal, positioning accuracy satisfies the setting value. • CAUTION: RAIM accuracy cannot be calculated. (Signals from more than five GPS satellites are necessary.) The positioning accuracy does not satisfy the setting value. • UNSAFE: GPS signal is abnormal, therefore the positioning accuracy is not reliable. • OFF: RAIM is disabled.
3	[PDOP], [HDOP]	Current DOP (Dilution Of Precision). Displayed as PDOP for positional dilution, HDOP for horizontal dilution.
4	[A. LEVEL]	Accuracy offset for RAIM.
5	[TIME]	Time and date. Displayed with the prefix "L" for local time, "U" for UTC.
6	Datum	Current Datum in use.
7	Location	Own ship latitude and longitude (coordinates).
8	[POSN]	Time and date of last position calculation. Displayed in a orange color when the unit is restarted. When connection is established and positioning can be calculated, the indication changes to the opposite color of the setting selected from the [DISPLAY] → [BKGD COLOR] menu.
9	[COG]	Course Over Ground.
10	[SOG]	Speed Over Ground.

2.7.2 GPS integrity screen

The GPS integrity display shows satellite status and various integrity-related data, as shown in the figure and table below.

No.	Name	Description
1	Satellite positions	Shows the available satellites and their elevation. • Light blue shaded circle: Indicates area where multipath can be used. • White numerals: Indicates satellites used for position fix. • Own ship is shown at the center of the circle. Press ▶ to alternate between North-Up and Head-Up orientations.
2	Own ship position/positioning reference	Shows OS coordinates and positioning reference.
3	Text data box	See section 2.7.1.
4	RX level	Shows the strength of the signal received from the satellite code. • [SV PRN]: Satellite number. • [SNR]: Signal to Noise Ratio. When more than 10 satellites are in use, press ▲ or ▼ to scroll though the list.
5	Satellite color codes	Shows the color code for the satellites currently in use. The displayed indications are abbreviated as follows: • [GP]: GPS. • [GL]: GLONASS. • [GA]: Galileo • [SBAS]: SBAS

2.7.3   BEACON INFO/TYPE 16 MESSAGE screen

The beacon information display screen has two information tabs, the [BEACON INFO] tab and the [TYPE16 MESSAGE] tab.

The GPS [BEACON INFO] tab displays important information about the selected GPS beacon.

The [TYPE16 MESSAGE] tab displays all received TYPE16 messages received from beacons.

To switch tabs, press either the ◀ or the ▶ arrow key.

No.	Name	Description
1	Own ship position/positioning reference	Shows OS coordinates and positioning reference
2	Text data box	See section 2.7.1.
3	Information/message box	**BEACON INFO tab**: • STATION NAME: Always shown as "UNKNOWN". • FREQUENCY: Beacon/station's frequency • STATION HEALTH: Always shown as "Not Available". • SIGNAL QUALITY: SN = Signal to noise ratio (range: 00 dB to 99 dB); SS = Signal strength (range: 00 dB to 99 dB). **Note:** Where the value for SN or SS exceeds the maximum displayable value, the indicated value appears as bars ("99dB").
4	[BEACON INFO] / [TYPE16 MESSAGE] tabs	Displays beacon information ([BEACON INFO] tab), or displays received [TYPE16 MESSAGE] messages.

2.8   THD Display Mode

THD (Transmitting Heading Device) display mode outputs heading data to external equipment. This display mode has three sub display screens. The default screen is the HDG (heading) data screen. The sub screens, in displayed order, are: ROT (Rate Of Turn) screen → HDG/ROT split screen → THD integrity screen.

Press the **ENT** key to cycle through the display screens.

2.8.1   HDG data screen

The HDG data screen shows your current heading and any offset applied to the heading data.
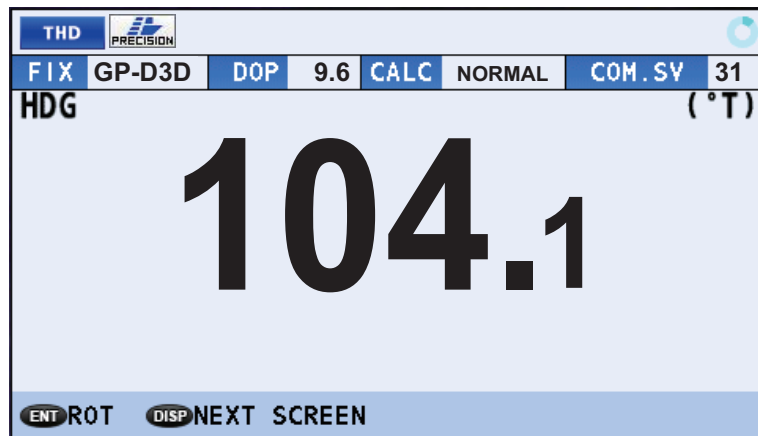

How to interpret the THD data display screen

Indication	Description
FIX	Current position fixing method (GP-3D, GP-D3D, etc.)
PDOP	Current DOP (Dilution Of Precision). Displayed as PDOP for positional dilution, HDOP for horizontal dilution.
CALC	Calculation status. • [NORMAL]: HDG and ROT are calculated normally. • [DR]: HDG and ROT are calculated using Dead Reckoning. • [STOPPED]: HDG calculation stopped. • [SYS FAULT]: System fault.
COM. SV	Commonly used satellite's number.

2.8.2 ROT data screen

The ROT data screen shows your vessel's current rate of turn.
How to interpret the ROT data screen

Indication	Description
FIX	Current position fixing method (GP-3D, GP-D3D, etc.)
PDOP	Current DOP (Dilution Of Precision). Displayed as PDOP for positional dilution, HDOP for horizontal dilution.
CALC	Calculation status. • [NORMAL]: HDG and ROT are calculated normally. • [DR]: HDG and ROT are calculated using Dead Reckoning. • [STOPPED]: HDG calculation stopped. • [SYS FAULT]: System fault.
COM. SAT	Commonly used satellite's number.

2.8.3 HDG/ROT split screen

The HDG/ROT split screen shows heading and rate of turn data with roll/pitch/heave.
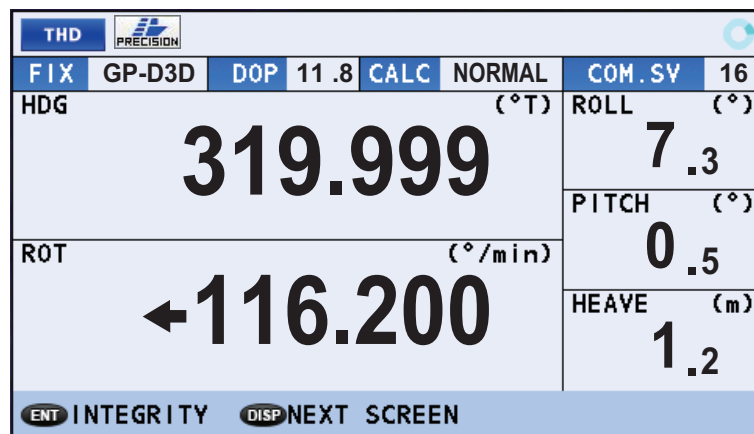

2.8.4 THD integrity screen

The THD integrity display shows satellite status and various integrity-related data, as shown in the figure and table below.

No.	Indication	Description
1	HDG	Current heading.
2	Available satellites	Shows the available satellites and their elevation. Press ▶ to alternate between North-Up and Head-Up orientations.
3	• ROT • CALC • COM. SAT	• Current Rate Of Turn. • Calculation status. (See the table in "HDG data screen" on page 2-10 for details.) • Commonly used satellite's number.
4	Satellite details	Shows the strength of the signal received from the satellites. More than one bar indicates that more than one antenna is using that satellite. • [SV PRN]: Satellite number. • [SNR]: Signal to Noise Ratio. When more than 10 satellites are in use, press ▲ or ▼ to scroll though the list.
5	Antenna baseline color codes	Shows the color for each antenna baseline in use. The displayed indications are abbreviated as follows: • [BL 1] - Antenna No. 1 + Antenna No. 2 • [BL 2]* - Antenna No. 2 + Antenna No. 3 • [BL 3]* - Antenna No. 3 + Antenna No. 1 • COM - Common *: Shown only when a SC-1303 is connected.

2.9 ROTI Display Mode

The ROTI display mode is essentially the same as the THD display mode, in terms of displayed data. However, the following items are displayed in a different manner:

- [DOP] and [FIX] are not shown.
- The indications for [ROT] and [HDG] in the split-screen are reversed.

This display mode has three sub display screens. The default screen is the ROT (Rate Of Turn) data screen. The sub screens, in displayed order, are: ROT analog meter screen → HDG (Heading) screen → ROT/HDG split screen → THD integrity screen.
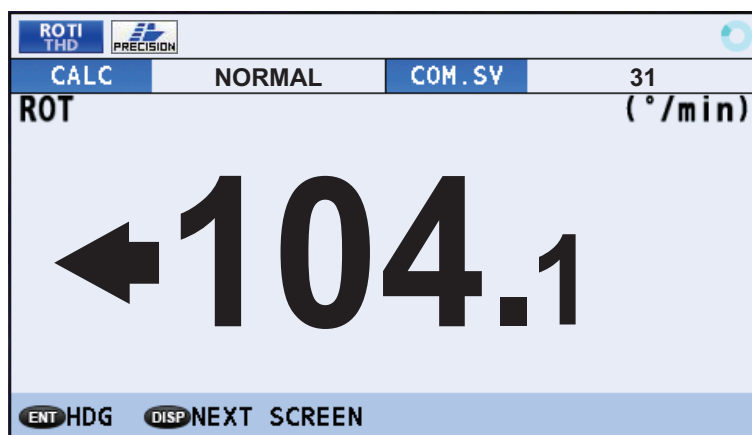

2.9.1 ROTI analog meter screen

In the ROT analog meter screen, the ROT data is displayed in an analog meter format. When the ROT value exceeds 30° (degrees), the meter needle will be as the illustration on right side.

When ROT value is 10 degrees (to the PORT)
When ROT value exceeds the 30 degrees (to the PORT)
2.9.2 ROTI Display for RD-50/RD-20 (option)

For vessels with the optional RD-50/RD-20 installed as part of the SC system configuration, you can show the ROTI data on the RD-50/RD-20 display. See the appropriate operator's manual for details (RD-50: OME-44530-x; RD-20: OME-44540-x; "x" denotes the manual version).

Note: For IMO-type vessels, the RD-50 remote display is compatible with IMO regulations. If you use the RD-20 remote display, your vessels no longer meets the IMO requirements.

2.10 SPD Display Mode (Non-IMO types only)

The speed and distance data display screen is the default. The sub screen shows navigational data. This display mode is only available for non-IMO types.

2.10.1 Speed and distance display screen
How to interpret the speed and distance display screen

No.	Indication	Description
1	[FIX], [DOP], [CALC], [COM. SV]	See section 2.8.1.
2	Lateral bow speed*	Shows the calculated speed at the bow of your vessel. The arrow indicates tendency to port or starboard.
3	Bow to stern speed*	Shows the calculated speed of your vessel. The arrow indicates forward or reverse motion.
4	Lateral stern speed*	Shows the calculated speed at the stern of your vessel. The arrow indicates tendency to port or starboard.
5	Distance traveled	Shows the distance traveled for this trip.

*: CALC-SPD values must be set at installation to show these speeds. See section 1.6.2 for details.

2.10.2 Navigational data screen
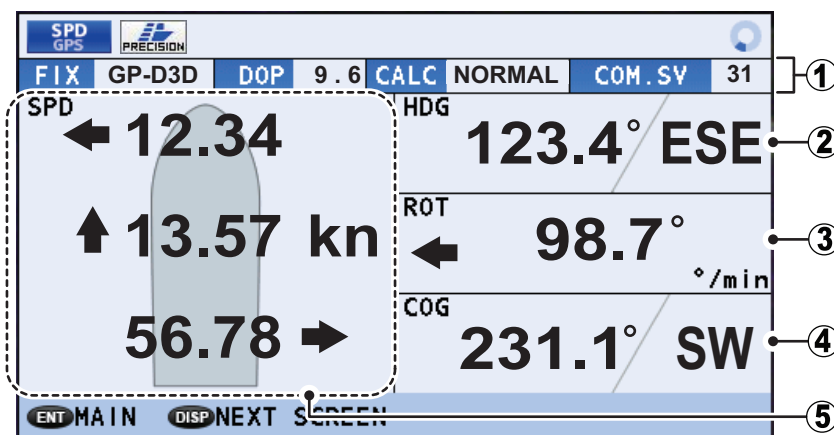

How to interpret the navigational data

No.	Indication	Description
1	FIX	See section 2.8.1.
2	HDG	Current heading
3	ROT	Rate of turn.
4	COG	Course Over Ground.
5	Speed data	Top line: Lateral bow speed. Middle line: Bow to stern speed. Bottom line: Lateral stern speed.

2.11 Alerts

2.11.1 What is an Alert?

"Alert" is a generic name for a notice to any unusual or potentially dangerous situation generated within the system.

Alerts are classified according to priority and category.

Alert priority

There are three alert priorities: alarm, warning and caution.

Alarm: Situations or conditions which require immediate attention, decision and (if necessary) action by the bridge team to avoid any kind of hazardous situation and to maintain the safe navigation of the ship.

Warning: Conditions or situations which require immediate attention for precautionary reasons, to make the bridge team aware of conditions which are not immediately hazardous, but may become so.

Caution: Awareness of a condition which continues to require attention out of the ordinary consideration of the situation or of given information.

Alert category

An alert is further classified by category, A, B or C, according to its degree of severity or source.

Category	Description
A	Category A alerts include the following, and must be confirmed from the equipment that generated the alert. • Danger of collision • Danger of grounding
B	Category B alerts are alerts where no additional information for decision support is necessary. Category B alerts are all alerts not falling under category A.
C	IAS (Integrated Automation System) generated engine alert

When an alert is triggered, a flashing indication appears at the bottom of the screen and an alert sound is released. The indication shows the alert icon, alert number (code) and the alert name.

[Warning] level alerts are shown in yellow-orange color, [Caution] level alerts are shown in yellow color.

When more than one alert is active, the highest priority alert appears in the flashing indication. Other active alerts are indicated with an icon, located to the right edge of the flashing indication.

Example alert message (flashing)

3008 GNSS CORE(1) FAULT

These icons only appear when multiple alerts of the related level are active.
The icon also shows the alert level:
"W" for Warnings and "C" for Cautions.

The SC-70/SC-130 tracks active (acknowledged but not rectified, or unacknowledged) alerts in the [ALERT LIST] (see section 2.11.5). Alerts which are acknowledged and rectified are saved in the [ALERT LOG] (see section 2.11.6).

For a full list of possible alerts, along with their details such as alert codes and remedies or action required, see "ALERT LIST" on page AP-4.

Alert icons

This equipment uses alert icons to indicate the alert level and status. For a list of the possible icons, see "Alert icons and their meanings" on page AP-10.

2.11.2 How to acknowledge alerts

There are three methods by which you can acknowledge an alert.

How to acknowledge an alert from the display unit (All alert modes)

Press the **ACK** key to acknowledge the alert.

How to acknowledge an alert remotely (IMO alert mode)

Alerts output by this equipment can be acknowledged remotely when displayed at equipment on the same network. Refer to the related equipment's manual for how to acknowledge an alert at that equipment.

How to acknowledge an alert remotely (LEGACY alert mode)

The [REMOTE ACK I/F] setting sets the behavior of external equipment which can acknowledge alerts. To use this function, the [ALERT MODE] must be set to [LEGACY] at installation. (Consult your dealer to change this setting.)

To set remote acknowledge, do the following:

1. Open the [MENU].
2. Select [ALERT], then press the **ENT** key.
3. Select [REMOTE ACK I/F], then press the **ENT** key.
4. Select the appropriate setting, then press the **ENT** key.

Setting	Description
[ACK]	External equipment can acknowledge alerts.
[BUZZER STOP]	External equipment can stop aural alerts, but cannot acknowledge alerts.

5. Close the [MENU].

Refer to the operator's manual for the external equipment for alert acknowledgment procedures.

2.11.3 How to silence alerts

When connected to the same network, alerts output by this equipment can be silenced remotely. Refer to the related equipment's manual for how to silence an alert at that equipment.

Note: The buzzer sounds again if the alert condition is not rectified or the alert is not acknowledged within 30 seconds.

2.11.4 How to enable/disable the aural alert (Non-IMO type only)

This setting is only available for non-IMO types.

1. Open the [MENU].

2. Select [ALERT], then press the **ENT** key.

3. Select [SOUND], then press the **ENT** key. An options pop up window appears.

4. Select the appropriate option, then press the **ENT** key.

Option	Description
[OFF]	Disable aural alerts.
[SHORT]	Release two short beeps when an alert is triggered.
[LONG]	Release three long beeps when an alert is triggered.
[CONTINUOUS]	Release a continuous beep when an alert is triggered.

5. Close the [MENU].

2.11.5 How to access the alert list

The alert list shows all currently violated alerts and state of acknowledgment.

All unacknowledged alerts are shown, even those whose reason for the alert has bee rectified or passed (except for cautions). To access the alert list, do the following:

1. Open the [MENU].

2. Select [ALERT], then press the **ENT** key.

3. Select [ALERT LIST], then press the **ENT** key. The list of active alerts appears.
If no alerts are active, the list shows the message "NO ACTIVE ALERTS".

4. Press ▲ or ▼ to scroll up or down through the alert log.
   To see the highest priority alert, press ◄.
   To see the lowest priority alert, press ►.

5. Press the **DISP** key to close the [ALERT LIST].

Note 1: You can also access the [ALERT LIST] from the [LIST] display. Press the **LIST** key to cycle through the lists.

Note 2: The time and date shown in this equipment is derived from the connected satellites. When connection (view) to the satellites is stopped or interrupted, the next available satellite's data is used. This equipment outputs the time and date, as part of the ZDA sentence, to the connected network and may be used for UTC synchroniza-

tion by other equipment. If the output ZDA sentence is interrupted to stopped, the connected equipment may not show the correct time.

How to interpret the alert list

No.	Indication name	Description
1	DATUM/OS coordinates or [HDG]/[ROT]	Where the device mode is [THD] or [ROTI]: • [HDG]: OS heading, oriented to North. If the heading data is received from an external device, the device name and external input talker are shown. • [ROT]: Rate of turn with arrow indicating turn direction to port or starboard. Where the device mode is [SPD] or [GPS]: Datum and OS coordinates are displayed.
2	FIX	Current position fixing method (GP-3D, GP-D3D, etc.)
3	CALC	Calculation status. • [NORMAL]: Data is calculated normally. • [DR]: Data is calculated using Dead Reckoning. • [STOPPED]: Data calculation stopped. • [SYS FAULT]: System fault.
4	Alert icon	Shows alert status. See page AP-10 for details.
5	Alert details	Top line: alert code, alert title Bottom line: time of alert, coordinates at time of alert. **Note:** A full list of alert codes, meaning and measure is included at "ALERT LIST" on page AP-4.
6	Alert text	Selected alert's message text.
7	Active alert	Shows the highest priority active alert.
8	Background icons	Shows the icon(s) for background alerts. This area is blank if there are no active background alerts.

Background alerts

Background alerts are alerts which are active at the same time as a higher priority alert. If there are two alerts of the same priority, the alert which occurred first (earliest) is shown in the "active alert" area of the list and the second (later) alert is shown as an icon. Warning level background alerts appear with a "W" icon, Caution level background alerts appear with a "C" icon.

2.11.6 How to access the alert log

The alert log shows the latest 50 alerts. When the log becomes full, the oldest entry is erased to make room for current alerts. To access the alert log, do the following:

1. Open the [MENU].

2. Select [ALERT], then press the **ENT** key.

3. Select [ALERT LOG], then press the **ENT** key.
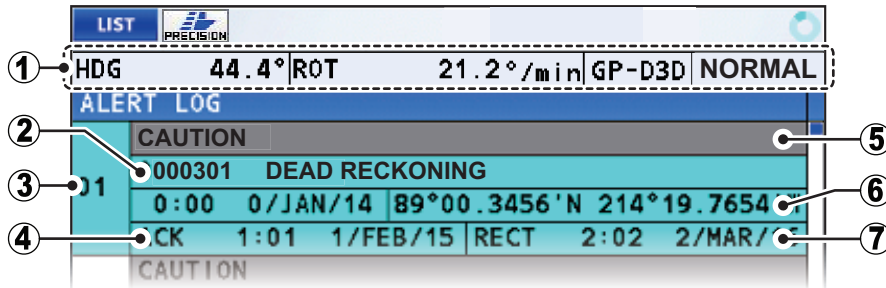

4. Press ▲ or ▼ to scroll up or down through the alert log.

5. Press the **DISP** key to close the [ALERT LOG].

Note 1: The [ALERT LOG] can also be accessed from the [LIST] display. Press the **LIST** key to cycle through the lists.

Note 2: The time and date shown in this equipment is derived from the connected satellites. When connection (view) to the satellites is stopped or interrupted, the next available satellite's data is used. This equipment outputs the time and date, as part of the ZDA sentence, to the connected network and may be used for UTC synchronization by other equipment. If the output ZDA sentence is interrupted to stopped, the connected equipment may not show the correct time.

How to interpret the alert log

No.	Indication name	Description
1	DATUM, OS coordinates, Calculation status, [HDG], [ROT]	See section 2.11.5.
2	Alert code and message	Alert code appears in six digit format. **Note:** A full list of alert codes, meaning and measure is included at "ALERT LIST" on page AP-4.
3	Alert number	Number assigned to the selected alert by the alert log. Up to 50 alerts are stored. **Note:** This is not an alert code.
4	[ACK]	Time and date the alert was acknowledged.
5	Alert priority	The priority level assigned to the selected alert. Displayed as "WARNING" or "CAUTION".
6	Alert time / coordinates	Time of alert, coordinates at time of alert.
7	[RECT]	Time and date alert was rectified.

2.11.7   Responsibility transfer alert

MSC302(87) requires the use of the "responsibility transfer alert" which functions in the multiple sensor, multiple equipment installation. When one sensor or one equipment fails but does not disturb the system operation (other sensor or equipment is normal), the AMS automatically sends the "responsibility transfer alert" (ACN sentence) to the sensor or equipment that generated the alert.

Note: All ALERT I/F2 Warning level alerts have responsibility transfer function. Caution level alerts <u>do not</u> have responsibility transfer function.

```
Some          ┌──────────┐         ALF        ┌──────────┐    Check if there
alerts   ⟳    │ Sensor   │ ─────────────────> │          │ ⟳  is problem for
occur         │   A      │         ACN        │ CAM HMI  │    system
              │          │ <───────────────── │          │
              └──────────┘                    └────┬─────┘
                                                   │
                                              ┌────┴─────┐
                                              │ Sensor   │
                                              │   B      │
                                              └──────────┘
```
If the sensor or equipment refuses the responsibility transfer, normal operation is restored.

```
Some          ┌──────────┐         ALF        ┌──────────┐    ALC timeout
alerts   ⟳    │ Sensor   │ ─────────────────> │          │ ⟳  computed.

              │          │ <───────────────── │          │ ⟳  Alert
              └──────────┘                    └────┬─────┘    re-generated.
                                                   │
                                              ┌────┴─────┐
                                              │ Sensor   │
                                              │   B      │
                                              └──────────┘
```
If the ALC sentence is not received from equipment within the prescribed time interval, the alert processed as responsibility transfer alert is made active and the "System communication fail" alert is generated.
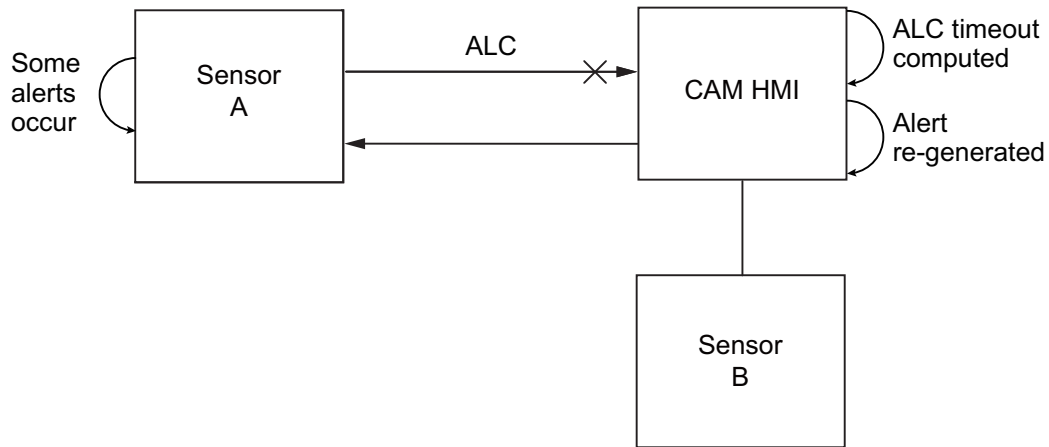

2.11.8   Alert escalation

All ALERT I/F2 Warning level alerts are escalated as Warning level alerts if they are not acknowledged or rectified within five minutes.

Caution level alerts are not escalated.

2.11.9   Alert continuation

Active alerts are terminated and their status is changed to "normal" under the following circumstances.

- When the [Device Mode] is changed. (Requires [SERVICE] menu login.)
- When the [Alert Mode] is changed. (Requires [SERVICE] menu login.)
- When the [Demo Mode] is activated/deactivated.

2.11.10 UTC de-synchronization and alert output

For vessels assigned as [RUSSIAN] at installation, the time/date field of some alerts sentences may be output as "null" under the following circumstances.

- The system is starting up.
- The system is unable to obtain a position fix.

2.12 How to View the Connected Devices

The [DEVICE LIST] shows up to 51 devices connected to the same NMEA2000 network. You can also view details for each displayed device.

To view the [DEVICE LIST], press the **LIST** button to cycle through the [LIST] screens.
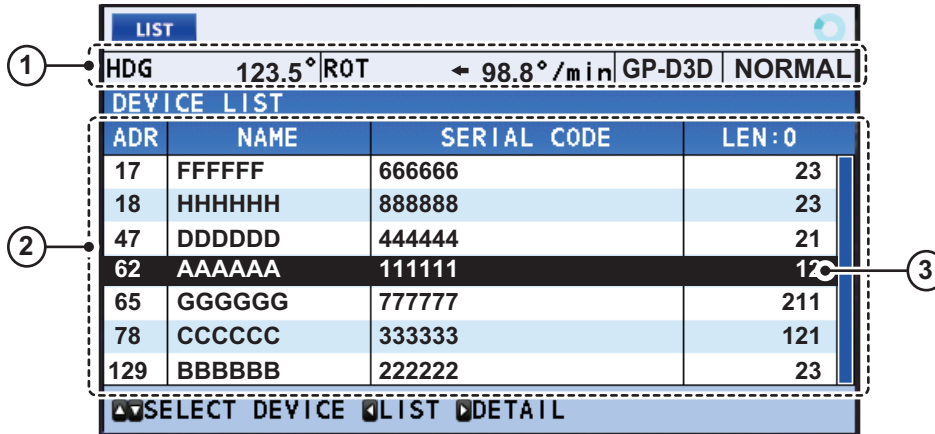

Note: The [DEVICE LIST] is updated each time it is accessed. If a device is added to the network while the [DEVICE LIST] is open, close, then re-open the [DEVICE LIST] to show the newly added device.

How to interpret the device list

No.	Indication name	Description
1	DATUM, OS coordinates, Calculation status, [HDG], [ROT]	See section 2.11.5.
2	[ADR]	NMEA2000 network address (0 to 255). Devices are listed in numerical order.
	[NAME]	CAN Device name.
	[SERIAL CODE]	CAN device's address claim.
	[LEN]	CAN device's LEN (Load Equivalency Number).
3	Selected item (highlighted)	Press ▼ or ▲ to scroll through the device list.

How to interpret device details

Select the device whose details you want to view, then press ▶. the device details appears at the center of the screen.
2.13 DISPLAY Menu

You can customize the manner in which most items are displayed on your screen, from the [DISPLAY] menu.

Press the **MENU ESC** key, select [DISPLAY], then press the **ENT** key to show the [DISPLAY] menu.

```
DISPLAY
[1] BKGD COLOR : WHITE
[2] UNIT                 ▶
[3] SMOOTHING            ▶
[4] DECIMAL ROUNDING     ▶
[5] DATUM        : WGS84
   TRIP SETTING          ▶
[7] TIME                 ▶
[8] LANGUAGE    : ENGLISH
```
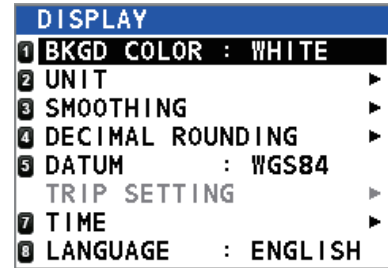

2.13.1 How To Change the Display Color

You can change the background and text color for better visibility. There are two options, White background and Black background.

White background   Black background
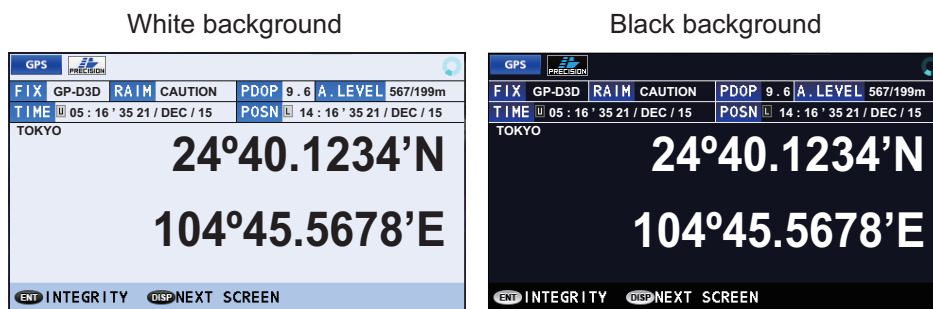

The color change can be made using of the two following methods:

How to change the color from the menu

1. Open the [DISPLAY] menu.

2. Select [BKGD COLOR], then press the **ENT** key.

3. Select [BLACK] or [WHITE] as appropriate, then press the **ENT** key.

4. Close the [MENU].

How to change the color from the controls

See section 2.3.2 for details.

2.13.2 How to Change the Units of Measurement

To change the unit of measurement for distance, follow the procedure below.

1. Open the [DISPLAY] menu.

2. Select [UNIT], then press the **ENT** key.

3. [DISTANCE] is selected, press the **ENT** key.

4. Select the appropriate distance unit, then press the **ENT** key.
    Note: The unit of measurement for speed is also changed, as shown below

    • [NM]: Nautical Miles - speed shown as [kn].

    • [KM]: Kilometers - speed shown as [km/h].

    • [SM]: Statute Miles - speed shown as [mph].

5. Close the [MENU].

2.13.3   How To Use The Smoothing Menu

Data received from external sensors can be smoothed. This helps to reduce variations caused by unfavorable receiving conditions or other factors.

1.   Open the [DISPLAY] menu.

2.   Select [SMOOTHING], then press the **ENT** key.

3.   Select the appropriate item to smooth, then press the **ENT** key.

Menu item	Description	Setting range
SOG/COG	Course over ground, ground speed	0000 s to 9999 s
6DoF	Six Degrees of Freedom - Roll/Pitch	0000 s to 9999 s
3AXIS SPEED	Dual water/ground speed	0000 s to 9999 s **Note:** Available for non-IMO types only.
ROT	Rate of turn	00 s to 30 s

4.   Close the [MENU].

To disable smoothing for any of the above menu items, repeat the above procedure, then set the smoothing value to [0] (zero).

2.13.4   How to set the number of digits after a decimal point

To change the number of digits displayed after a decimal point, follow the procedure below. Up to three digits can be set.

1.   Open the [DISPLAY] menu.

2.   Select [DECIMAL ROUNDING], then press the **ENT** key.

3.   Select the appropriate item, then press the **ENT** key.

Item	Affected indications
[VTG]	Speed indications which use the VTG sentence for data input.
[VBW]	Speed indications which use the VBW sentence for data input.
[HDG]	All heading indications. ([ROT] is also affected, see section 2.8.2.)
[ROLL, PITCH]	All roll/pitch indications. ([HEAVE] is also affected, see section 2.8.3.)

4.   Select [1], [2] or [3] as appropriate, then press the **ENT** key.

   • [1]: Values are displayed with one digit after the decimal point. The values are also rounded up or down as appropriate.

   • [2]: Values are displayed with two digits after the decimal point. The values are also rounded up or down as appropriate.

   • [3]: Values are displayed with three digits after the decimal point. The values are also rounded up or down as appropriate.

   Note: This setting also affects serial output data, sent to other equipment.

5.   Close the [MENU].

2.13.5 How to Set Geodetic Data

The SC-70/SC-130 uses the WGS84 datum as the default geodetic datum. To change the datum used, follow the procedure below.

1. Open the [DISPLAY] menu.

2. Select [DATUM], then press the **ENT** key.

3. Select the appropriate datum, then press the **ENT** key. The available selections are: [WGS84], [WGS72], [PZ90], [CK42], [CK95] and [OTHERS].
    If the datum you wish to use is not displayed, select [OTHERS].

4. If you selected [OTHERS], proceed to step 5. For all other selections, close the menu.

5. Input the chart number, referring to the geodetic chart list at the back of this manual, then press the **ENT** key.

6. Close the [MENU].

2.13.6 How to Reset the Trip Meter

The trip meter calculates the distance your vessel has traveled and can be restarted at any time. This menu is not available for IMO types.

To reset the trip meter, do the following:

1. Open the [DISPLAY] menu.

2. Select [TRIP SETTING], then press the **ENT** key.

3. [CLEAR] is already selected. Press the **ENT** key to reset the meter.

4. Close the [MENU].

2.13.7 How to Adjust the Date and Time

The SC-70/SC-130 can display the date and time in UTC format or as the local (geographical) time. You can also set for summer time. To adjust time settings, refer to the appropriate topic below.

Note: These settings are only applied to the SC-70/SC-130 display and do not affect the time/date included in the ZDA sentence when output.

How to change the time display format

1. Open the [DISPLAY] menu.

2. Select [TIME], then press the **ENT** key.

3. Select [LOCAL TIME], then press the **ENT** key.

4. Select [UTC] or [LOCAL] as appropriate, then press the **ENT** key.

Setting	Remarks
[UTC]	UTC (Coordinated Universal Time) time is calculated automatically.
[LOCAL]	Manually input the time offset (based on UTC time).

5. Close the [MENU].

How to enable/disable summer time

You can manually adjust the time to reflect summer (daylight saving) time.

1. Open the [DISPLAY] menu.

2. Select [TIME], then press the **ENT** key.

3. Select [SUMMER TIME], then press the **ENT** key.

4. Select [ON] to enable summer time, [OFF] to disable summer time.

5. Close the [MENU].

2.13.8 How to Set the Display Language

The SC-70/SC-130 can display menus and data in English or Japanese. If the display language has been changed to Japanese, do the following to change the language back to English.

Note: This procedure uses the menu item numbers which are displayed at the left-side of each menu.

1. Open the [MENU].

2. Select [1], then press the **ENT** key.

3. Select [8], then press the **ENT** key.

4. Select [ENGLISH], then press the **ENT** key.

5. Close the [MENU].

2.14 GNSS Menu

You can adjust various GNSS-related settings from the [GNSS] menu.

Press the **MENU ESC** key, select [GNSS], then press the **ENT** key to show the [GNSS] menu.

```
GNSS
1 POSN. SYSTEM : GPS
  MODE         : AUTO(2D/3D)
3 POSN. CONDITION          ▶
4 DGPS/SBAS                ▶
5 RAIM                     ▶
6 ROLL OVER    : 2016
  SETUP                    ▶
```
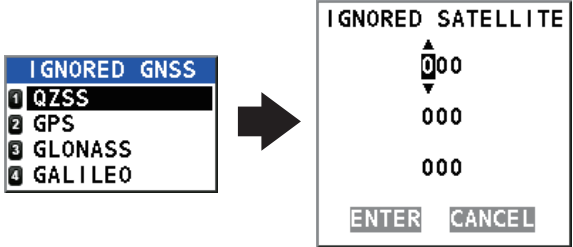

2.14.1 How to select the positioning system to use

1. Open the [GNSS] menu.

2. Select [POSN. SYSTEM], then press the **ENT** key.

3. Select the appropriate positioning system, then press the **ENT** key.
   Note: At the time of printing, only [GPS] is available for selection. Other positioning system may be added at a later date.

4. Close the [MENU].

2.14.2 How to set the positioning conditions

1. Open the [GNSS] menu.

2. Select [POSN. CONDITION], then press the **ENT** key.

3. Referring to the table below, set the conditions for position fixing, then press the **ENT** key.

Menu item	Options	Remarks
QZSS	• [OFF] • [ON] (default)	Enable/disable the use of the QZSS system.
ELEVATION MASK	For technical personnel only. Not changeable.	
IGNORED GNSS	[000] to [999]	The system uses the on-board almanac to ignore satellites which are known to provide incorrect data. However, some of these satellites may not be registered in the almanac. You can add satellites to be ignored using this function. 1) Select the satellite network to which the satellite you want to ignore is registered. The [IGNORED SATELLITE] window appears. 2) Enter the satellite number to be ignored. You can enter up to 3 satellites per network. Press ▲ to increase the value, ▼ to decrease the value and press ▶ or ◀ to move the input cursor. IGNORED GNSS / IGNORED SATELLITE 3) Select [ENTER], then press the **ENT** key.

4. Close the [MENU].

2.14.3 How to Set Up DGPS/SBAS

The SC-70/SC-130 can connect to DGPS beacons or SBAS (Satellite Based Augmentation Systems) to refine position fixing.

How to select the mode of refinement

1) Open the [GNSS] menu.
2) Select [DGPS/SBAS], then press the **ENT** key.
3) Select [DIFFERENTIAL], then press the **ENT** key.
4) Referring to the list below, select the appropriate mode, then press the **ENT** key.
   • [GNSS]: No position refinement used.
   • [GNSS+SBAS]: Use SBAS to refine position fixing.
   • [GNSS+EXTERNAL]: Use beacons to refine position fixing.
     Note: The [MODE] setting for [DATA5] in the [I/O] menu must be set to [RTCM] to enable this mode.
   • [AUTO]: The SC-70/SC-130 automatically switches modes as required.
     The priority is: [EXTERNAL] > [SBAS] > [GNSS].
5) Close the [MENU].

How to search for available SBAS

1) Open the [GNSS] menu.
2) Select [DGPS/SBAS], then press the **ENT** key.
3) Select [SBAS SEARCH], then press the **ENT** key.
4) Select [AUTO] or [MANUAL] as appropriate, then press the **ENT** key.
   • [AUTO] selects the highest elevated satellite available.
   • [MANUAL] requires the manual input of the three-digit satellite number.
5) Close the [MENU].

How to ignore SBAS satellites

1) Open the [GNSS] menu.
2) Select [DGPS/SBAS], then press the **ENT** key.
3) Select [IGNORED SBAS], then press the **ENT** key.
4) Enter the satellite number to be ignored. You can enter up to 3 satellites per network. Press ▲ to increase the value, ▼ to decrease the value and press ▶ or ◀ to move the input cursor.
5) Close the [MENU].

How to select the DGPS beacon

1) Open the [GNSS] menu.
2) Select [DGPS/SBAS], then press the **ENT** key.
3) Select [BEACON SETUP], then press the **ENT** key.
4) Select [AUTO] or [MANUAL], then press the **ENT** key.
   • [AUTO]: The SC-70/SC-130 automatically select the beacon to use.
   • [MANUAL]: Manually input the beacon frequency and bit rate.
5) Close the [MENU].

2.14.4 How to Set Up RAIM

RAIM (Receiver Autonomous Integrity Monitoring) is a diagnostic feature which tests the integrity (accuracy) of the position fixing signal.

The receiver estimates position confidence using range value and detected satellite error, and displays (provided the RAIM function is active) the results as one of three levels of position confidence in the text data box of the GPS display mode only. The three levels are as follows:

- [SAFE]: GPS signal is normal. The positioning accuracy satisfies the setting value.
- [CAUTION]: RAIM accuracy cannot be calculated. (Signals from five or more GPS satellites are necessary for calculation.) The positioning accuracy does not satisfy the setting value.
- [UNSAFE]: GPS signal is abnormal, therefore the positioning accuracy is not reliable.

To use the RAIM feature, do the following:

1. Open the [GNSS] menu.
2. Select [RAIM], then press the **ENT** key.
3. Select [RAIM FOR GPS], then press the **ENT** key.
4. Select [SETTING], then press the **ENT** key. An options pop up window appears.
5. Select [ON] to enable the RAIM feature, select [OFF] to disable the RAIM feature.
6. Select [ACCURACY LEVEL], then press the **ENT** key. A numerical input pop up window appears.
7. Set the compensation for RAIM accuracy.
8. Select [ENTER], then press the **ENT** key to apply the RAIM settings, or select [CANCEL] then press the **ENT** key ignore the settings changes.
9. Close the [MENU].

2.14.5 How to set the rollover timing

The SC-70/SC-130 uses the positioning system to calculated date and time. Date and time data sent via satellite signal is reset once every few years, which can cause problems in date/time display. The rollover is used to prevent this from occurring. By setting the correct year on your SC-70/SC-130, the satellites and your system become synchronized.

1. Open the [GNSS] menu.
2. Select [RAIM], then press the **ENT** key.
3. Select [ROLL OVER], then press the **ENT** key. The [INPUT ROLL OVER] window appears.
4. Enter the current year.
   Press ▲ to increase the value, ▼ to decrease the value and press ▶ or ◀ to move the input cursor.
5. Select [ENTER] to apply the new setting, select [CANCEL] to keep the current setting.
   If you select [ENTER], a confirmation window appears. Select [YES] to confirm and restart the system with the new setting.

2.15 How to Set Up the I/O Menu

Besides its fundamental function of displaying position, the SC-70/SC-130 can also output various data to external equipment. Before outputting data to external equipment, first determine what data the external equipment requires. Only the necessary data should be output, to ensure that the data will be output correctly.

All data transmitted by marine electronics equipment are prefixed with a two character code, known as a "talker". The same talker must be shared by the transmitting and receiving equipment to transmit and receive data successfully.

2.15.1 How to set up serial data output

The SC-70/SC-130 has five serial data ports which can be set up for data output.

To set up more than one port, repeat the procedure below as necessary.

1. Open the [MENU].
2. Select [I/O], then press the **ENT** key.
3. Select [DATA 1], or the appropriate data port, then press the **ENT** key.
4. Select [DATA OUTPUT], then press the **ENT** key. An options pop up window appears.
5. Select [IEC/NMEA] or [RTCM] as appropriate, then press the **ENT** key.
   [IEC/NMEA]: Output data in NMEA format.
   [RTCM]: Output data in binary format.
   Note: [RTCM] can only be selected as the mode of output at [DATA 5], all other ports display [RTCM] in gray color and [RTCM] is not selectable.
6. For non-IMO vessels only, select [OUTPUT FORMAT], then press the **ENT** key. An options pop up window appears.
   For IMO type vessels, go to step 12. [OUTPUT FORMAT] and [BAUD RATE] are fixed for IMO type vessels.
7. Select the appropriate port output format, then press the **ENT** key. The available options are: [IEC61162-1ED.5], [IEC61162-1ED.3], [NMEA V2.0], [NMEA V1.5].
8. Select [TALKER], then press the **ENT** key. An options pop up window appears.
9. Select the appropriate talker, then press the **ENT** key. The available options are listed in the table below with a brief description.

Talker	Description	Talker	Description
GN	Mixed GPS and GLONASS	GP	GPS
HE	Heading - North seeking gyrocompass	GL	GLONASS
HN	Heading - Non-north seeking gyrocompass	GA	Galileo
HC	Heading - Magnetic compass		

Note: For IMO-types, the talkers are fixed as follows.
- THD, ROTI device mode: Fixed at [HE].
- GPS device mode: Fixed at [GP].

10. Select [BAUD RATE], then press the **ENT** key. An options pop up window appears.
11. Select the appropriate baud rate for data transfer, then press the **ENT** key.

12. Select [SENTENCES], then press the **ENT** key. The sentence setup window appears.

Currently selected port and port's baud rate

Sentence load rate

Sentences and their settings

13. Press the arrow keys to move the selection cursor and highlight the sentence to set up, then press the **ENT** key. The cycle section of the sentence is now highlighted.

14. Press ◄ or ► to adjust the sentence output cycle, then press the **ENT** key.

15. To set up other sentences, repeat step 13 and step 14 as necessary.
    Note: The sentence load rate indicates the workload required to process the sentences. When setting sentences, observe the load rate carefully and ensure it does not reach or exceed 100%.

16. To apply the changes, select [ENTER], at the bottom of the sentence list, then press the **ENT** key.
    To cancel any changes to the sentences, select [CANCEL], then press the **ENT** key.

17. Close the [MENU].

2.15.2 How to set up LAN data output

When connecting the SC-70/SC-130 to a shipboard LAN network, perform the following procedure to set up data output.

1. Open the [MENU].

2. Select [I/O], then press the **ENT** key.

3. Select [NETWORK], then press the **ENT** key.

4. For non-IMO vessels, select [TALKER], then press the **ENT** key.
   An options pop up window appears.
   For IMO-type vessels, go to step 6.

5. Select the appropriate talker, then press the **ENT** key. The available options are listed in the table at step 9 of section 2.15.1.
   Note: For IMO-types, the talkers are fixed as follows.

   • THD, ROTI device mode: Fixed at [HE].

   • GPS device mode: Fixed at [GP].

6. Referring to steps 12 through 15 of section 2.15.1, set up the sentences as appropriate.

7. Select [IP ADDRESS/PORT], then press the **ENT** key. A numerical pop up window appears.
   Use the following IP Address and Port combinations to show the log data in the [ETHERNET] log:

IP Address	Port	IP Address	Port
239.192.000.001	60001	239.192.000.004	60004
239.192.000.003	60003	239.192.000.008	60008
239.192.1.56*	60056*		

*: To be used only when an SRP output log is required.

8. Set the IP address and port as appropriate, select [ENTER], then press the **ENT** key.

9. Close the [MENU].

2.15.3 How to set up data sources (data input)

1. Open the [MENU].

2. Select [I/O], then press the **ENT** key.

3. Select [DATA SOURCE], then press the **ENT** key.

4. Select [HDG] (Heading) or [EXT. STW] (External Speed Thru Water), then press the **ENT** key. An options pop up window appears.

5. Referring to the table below, set the appropriate data source for [HDG] or [EXT. STW].

Menu option	Description
[INTERNAL LAN]*	Use the SC-70/SC-130 antenna as the data source. This is the default setting.
[DATA 1] to [DATA 5]	Select the serial port for position data input from an external source.
[USER PRIORITY]	Set the priority for serial ports. If the signal from a port is interrupted, the SC-70/SC-130 automatically switches to the next available port (sensor), in priority order. The port numbers are listed on the left-side of the window. The priority settings, at the right-side of the window, show the highest priority sensor to the left, and the lowest priority sensor to the right. In the example figure, the priority order is set as follows: 1→6→4→2→5→3. **Note:** [1: INTERNAL LAN] is fixed as the highest priority data source.
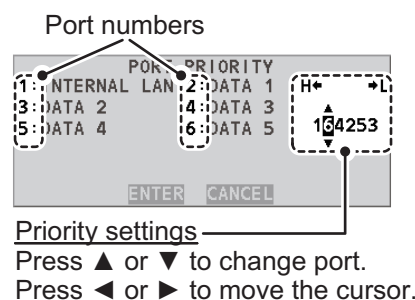

*: The [INTERNAL LAN] menu option is not available for [EXT. STW].

6. Close the [MENU].

2.15.4 How to use the input/output logs

The [I/O LOGS] display logged data for input/output information for serial ports and LAN connections. You can export the logged data to an external flash memory.

The following keys have specific functions when a log screen appears.

Key	Function
◄	Close the log and return to the [I/O] menu.
▲ or ▼	Toggle input and output log displays.
ENT	Press with external flash memory connected: start/pause saving the log.
MENU ESC	Close the logs and the [I/O] menu.

Saved log files are automatically named in the following format:

This equipment's name

The log type
Tx = ouput
Rx = input

Time and date when the log was saved.
Displayed in YYYYMMDDHHMMSS format.

SC70_Tx_DATA1_20150917235959

The logged port. Displayed in the filename as follows:
DATA 1 to DATA 5 : Data from serial port 1 to 5.
Network   : Data from the connected LAN network.
CANbus   : PGN data from the CAN bus network.
RAW   : Raw data from the connected antenna.

The log data which can be saved depends on the monitor type selected.

[DATA1] to [DATA5] - Serial data

Currently displayed data
TX = Output data
RX = Input data

Selected port and port's baud rate

USB status
No USB = No external flash memory connected.
SAVING = Saving log data to external flash memory.
STOP SAVING = Flash memory connected, no log data currently being saved.

Logged input/output data is displayed here.

2. OPERATION
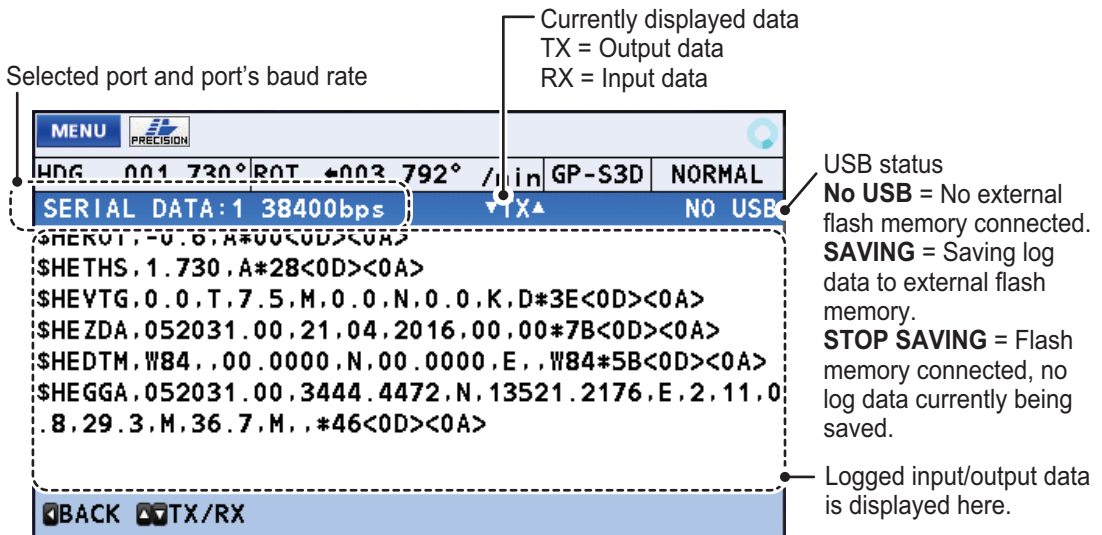

[ETHERNET] - LAN data

Note: If the IP address & port combination is not a recognized combination (see section 2.15.2), the [ETHERNET] log screen appears blank.

Data source's IP address   Destination broadcast address and port

[LAN ERROR LOG]

The [LAN ERROR LOG] counts LAN errors, filing the errors in one of six error groups. The table below shows the error groups along with possible causes for their errors.

LAN ERROR COUNTER	
1 INCORRECT SENTENCE	0
2 TAG BLOCK FRAMING ERROR	0
3 TAG SYNTAX ERROR	0
4 TAG BLOCK CHECKSUM ERROR	0
5 INCORRECT TAG BLOCK	0
6 INVALID HEADER	0

Error	Possible cause(s)
[INCORRECT SENTENCE]	• Sentence in TAG block has an error. • CHECKSUM error. • Sentence does not meet NMEA0183 standards.
[TAG BLOCK FRAMING ERROR]	Unexpected transmission start/stop in TAG block.
[TAG SYNTAX ERROR]	• One or more errors in TAG block. • Data length is too long or too short. • Delimiter is in use. • Use of incorrect characters.
[TAG BLOCK CHECKSUM ERROR]	TAG block has one or more CHECKSUM errors.
[INCORRECT TAG BLOCK]	One or more instances of the following: • Incorrect talker used. • Incorrect SFI used. • Incorrect parameters (g, s, p, n, t) used.
[INVALID HEADER]	One or more instances where the following are not included: • UdPbC • RaUdP • RrUdP

Press and hold the **ENT** key to clear the [LAN ERROR LOG].

2.15.5 How to restart heading output

In cases where the heading signal is lost or interrupted, the SC-70/SC-130 can restart signal output. There are two methods, [AUTO] and [MANUAL].

1. Open the [MENU].

2. Select [I/O], then press the **ENT** key.

3. Select [MISCELLANEOUS], then press the **ENT** key.

4. Select [HDG OUTPUT RESTART], then press the **ENT** key. An options pop up window appears.

5. Select [AUTO] or [MANUAL] as appropriate, then press the **ENT** key.

   [AUTO]   : Automatically restart heading output when the signal is restored.

   [MANUAL]   : When the heading signal is lost, an alert message and audible alert are released. If the heading signal output is restored, the message "HDG DATA OUTPUT HAS BEEN RESTARTED." is shown. Press the **ENT** key to resume the signal output.

   Note: The default setting is [AUTO]. Select [MANUAL] depending on connected equipment.

6. Close the [MENU].

2.15.6 How to use backup HDG output

Note: This feature is NOT available for vessels set as [RUSSIA] and [MERCHANT] at installation. For Russian merchant vessels, this feature is fixed to [OFF] and related settings are not shown in the menu.

The SC-70/130 can use the heading from the last time of operation as a backup immediately after the power is turned on. The backup heading is used until a new heading is fixed. You can activate or deactivate this feature with the following procedure.

1. Open the [MENU].
2. Select [I/O], then press the **ENT** key.
3. Select [MISCELLANEOUS], then press the **ENT** key.
4. Select [REPEATER BACKUP HDG OUTPUT], then press the **ENT** key.
5. Select [ON] or [OFF] as required.
    [ON]: Uses dead reckoning heading until a heading is fixed.
    [OFF]: Disables dead reckoning heading until a heading is fixed.
6. Close the [MENU].

2.15.7 How to change the speed reference (Non-IMO types only)

The speed reference is used in the VHW sentence for speed data output to external equipment.

1. Open the [MENU].
2. Select [I/O], then press the **ENT** key.
3. Select [MISCELLANEOUS], then press the **ENT** key.
4. Select [STW] (Speed Through Water), then press the **ENT** key. An options pop up window appears.
5. Select [VECTOR] or [SCALAR] as appropriate, then press the **ENT** key.

    [VECTOR]   :   Speed is calculated based on own ship vector.
    [SCALAR]   :   Speed is calculated based on SOG (Speed Over Ground).

6. Close the [MENU].

2.16 SENSOR Menu

The [SENSOR] menu contains settings for the connected sensors. Some settings in this menu require service level access and are not changeable by the user.

To access this menu, open the [MENU], then select [SENSOR].

Note: The [OFFSET] menu is reserved for technical personnel only.

2.16.1 OTHER menu

1. Open the [MENU].
2. Select [SENSOR], then press the **ENT** key.

3. Select [OTHER], then press the **ENT** key.

```
OTHER
 ANTENNA RESTART ●──────────┐
2 GNSS RESTART              ├──── For technical personnel
 CLEAR MAGNETIC DEVICE ●────┘      only
4 DR TIME            : 5min
 MAGNETIC VARIATION : AUTO ●────── Not available for IMO types
```
4. Select the appropriate menu item, then press the **ENT** key.

   • [GNSS RESTART]: Restarts the GNSS cores. A confirmation message appears; select [YES] to reset the GNSS cores or select [NO] to cancel the reset.

   • [DR TIME]: Set the Dead Reckoning time. Available options are [1 min], [2 min], [3 min], [4 min] and [5 min] (default setting). Select the required time, then press the **ENT** key.

   • [MAGNETIC VARIATION]: Select whether to adjust for magnetic variation automatically ([AUTO]) or manually ([MANUAL]). If you selected [MANUAL], the [INPUT MAGNETIC VARIATION] pop up window appears. Enter the variation amount, select [ENTER], then press the **ENT** key.

   ```
   INPUT MAGNETIC VARIATION
           ▲
        000.0° E
           ▼
      ENTER  CANCEL
   ```

   Note: The [MAGNETIC VARIATION] menu item is not available for IMO types.

5. Close the [MENU].
2.16.2 SENSOR STATUS menu

You can check the status of your sensors from this menu. Select [SENSOR STATUS] from the [SENSOR] menu to show the window below.

```
SENSOR STATUS
① ACCELEROMETER STATUS          PORT ⤢ STBD
    OK
② RATE GYRO STATUS
    OK
③ OUTPUT STATUS
    NORMAL
④ CALCULATION STATUS
    000000
⑤ INSTALLATION
    OK                          ◣ BLOCKED AREA
```
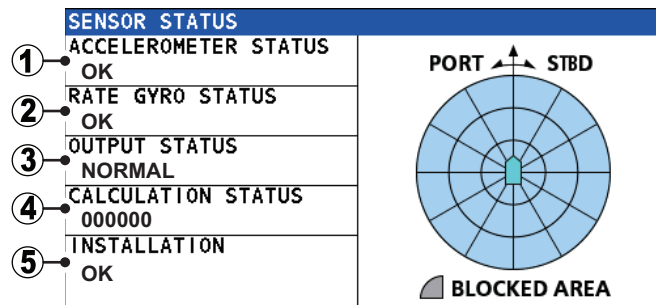

Possible statuses for each item are listed in the table below.

No.	Possible status
1	• "OK": Sensor is functioning normally. • "NG (axis)": The sensor is not functioning normally on the axis shown. For example, "NG X,Y" means the X and Y axis are not functioning normally.
2	• "OK": Sensor is functioning normally. • "NG (axis)": The sensor is not functioning normally on the axis shown. For example, "NG X,Y" means the X and Y axis are not functioning normally.
3	• "NORMAL": Sensor is functioning normally. • "DR": Dead Reckoning in use. • "OUTPUT STOPPED": Sensor output has stopped. • "NOT EXPECTED": An unexpected error has occurred.
4	Hexadecimal code is displayed.

No.	Possible status
5	• "OK": Sensor is functioning normally. • "BLOCKED": One or more sensors' line of view is blocked. • "VIBRATED": One or more sensors are in a location which is subject to excessive vibrations.

2.17 SYSTEM Menu

The SYSTEM menu contains settings for your SC-70/SC-130 system. To access this menu, open the [MENU] then select [SYSTEM].

Note 1: The [USB FLASH DRIVE] menu item is selectable only when a USB Flash Memory is connected to the Junction Box.

Note 2: The [NETWORK] menu item is reserved for technical personnel only and requires password level access from the [SERVICE] menu.

The SFI settings should be done at installation by the service technician.

The SFI must be in the format "ccxxxx" (six characters), where "cc" is the talker (default for this equipment is "HE"). The "xxxx" portion of the SFI has a setting range of 0001 to 9998. To change these settings, consult your installation technician or your local FURUNO dealer.
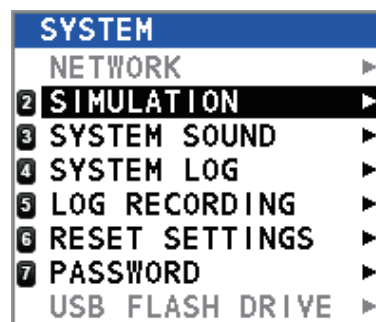

2.17.1 Simulation mode

Note: For vessels set as [RUSSIA] and [MERCHANT] at installation, this feature is only available for FURUNO service technicians.

Simulation mode uses data from the internal memory to provide a simulation of the systems functions. To use the simulation mode, several settings are required, as listed in the procedure below.

1. Open the [MENU].

2. Select [SYSTEM], then press the **ENT** key.

3. Select [SIMULATION], then press the **ENT** key.
4. Select [MOVEMENT SETTING], then press the **ENT** key. The [SIMULA-TION(MOVEMENT) SETTING] window appears.

No.	Menu item	Description
1	• [DATE] • [POSN]	• Sets the date for the simulation. • Sets the position (coordinates) for the simulation.
2	[STRAIGHT] • [DIRECT] • [SOG]	Sets a simulated course in a straight line. • Sets the heading for the simulation. • Sets the SOG (Speed Over Ground) for the simulation.
3	[CIRCLE] • [DIRECT] • [RADIUS] • [ANGULAR SPD]	Sets a simulated course in a circle. • Sets the direction of the circle. ([CW]: Clockwise; [CCW]:Counter-clockwise) • Sets the radius of the circle, in Nautical Miles. • Sets the speed at which to turn during the simulation.

5. Referring to the figure and table above, select a parameter to set for the simulation, then press the **ENT** key. A settings pop up window appears.

6. Press the CursorPad to move the cursor and adjust the settings for the selected parameter. When the settings for the selected parameter are complete, select **ENTER**, at the bottom of the window, then press the **ENT** key. The [SIMULATION(MOVEMENT) SETTING] window appears.

7. When all parameter settings are complete, select **ENTER**, at the bottom of the [SIMULATION(MOVEMENT) SETTING] window, then press the **ENT** key. The [SIMULATION] menu appears.

8. Select [ATTITUDE SETTING], then press the **ENT** key. The [SIMULATION(ATTITUDE) SETTING] window appears.

No.	Menu item	Description
1	[ATTITUDE] • [HDG AMPLITUDE] • [HDG ANGULAR RATE] • [PITCH AMPLITUDE] • [PITCH ANGULAR RATE] • [ROLL AMPLITUDE] • [ROLL ANGULAR RATE]	Attitude settings for heading, pitch and roll. • Sets the heading angle. • Sets the rate at which the heading changes. • Sets the pitch angle. • Sets the rate at which the pitch changes. • Sets the roll angle. • Sets the rate at which the roll changes.
2	[HEAVE] • [AMPLITUDE] • [FREQUENCY]	Settings for heave. • Sets the distance for heave. • Sets the frequency (Hz) for heave.

9. Referring to the figure and table above, select a parameter to set for the simulation, then press the **ENT** key. A settings pop up window appears.

10. Press the CursorPad to move the cursor and adjust the settings for the selected parameter. When the settings for the selected parameter are complete, select **ENTER**, at the bottom of the window, then press the **ENT** key. The [SIMULATION(ATTITUDE) SETTING] window appears.

11. When all parameter settings are complete, select **ENTER**, at the bottom of the [SIMULATION(ATTITUDE) SETTING] window, then press the **ENT** key. The [SIMULATION] menu appears.

12. Select [SIMULATION], then press the **ENT** key. The start/stop options window appears.

13. Select [START]. A confirmation window appears. Select [YES] to start the simulation, or select [NO] to cancel.
   If you select [YES], the system restarts. When the restart is completed, the system operates in simulation mode and the simulation indicator is shown at the top-right of the display.

How to stop the simulation

You can stop the simulation at any time from the menu.

1. Referring to the steps 1 to 3 of the above procedure, open the [SIMULATION] menu.

2. Select [SIMULATION], then press the **ENT** key. The start/stop options window appears.

3. Select [STOP]. A confirmation window appears. Select [YES] to start the simulation, or select [NO] to cancel.
   If you select [YES], the system restarts. When the restart is completed, the system operates in normal mode and the simulation indicator is not shown at the top-right of the display.

2.17.2 SYSTEM SOUND menu

When a key is pressed the system releases a "key beep". You can turn the key beeps on or off, to suit your preference.

1. Open the [MENU].

2. Select [SYSTEM], then press the **ENT** key.

3. Select [SYSTEM SOUND], then press the **ENT** key. The [SYSTEM SOUND] menu appears.

```
SYSTEM SOUND
1 KEY BEEP            : ON
  NOTIFICATION SOUND : ON
```

4. [KEY BEEP] is already selected, press the **ENT** key. The settings options window appears.
   Note: The [NOTIFICATION SOUND] menu item is reserved for technical personnel and is not selectable.

5. Select [ON] or [OFF] as appropriate, then press the **ENT** key.

6. Close the [MENU].

2.17.3 SYSTEM LOG menu

If a USB Flash Memory is connected to the Junction Box, you can save a system log file to the USB. To save a log file, do the following:

1. Open the [MENU].

2. Select [SYSTEM], then press the **ENT** key.

3. Select [SYSTEM LOG], then press the **ENT** key. The [SYSTEM LOG] menu appears.

```
SYSTEM LOG
1 RECORDING : OFF
  LOG LEVEL : FATAL
```

4. [RECORDING] is already selected, press the **ENT** key. The settings options window appears.
   Note: The [LOG LEVEL] menu item is reserved for technical personnel and is not selectable.

5. Select [ON] or [OFF] as appropriate, then press the **ENT** key.

6. Close the [MENU].

2.17.4 How to save a sensor log

You can save a log file for your GNSS, sensor or offline (both GNSS and sensor) data.

1. Open the [MENU].

2. Select [SYSTEM], then press the **ENT** key.

3. Select [LOG RECORDING], then press the **ENT** key. The [LOG RECORDING] menu appears.

4. Select [LOG TYPE], then press the **ENT** key. An options pop up window appears.

```
LOG RECORDING
1 LOG TYPE    : OFF
2 DESTINATION : USB
```

5. Select the appropriate option, then press the **ENT** key.

   • [OFF]: No log data is saved.

   • [GNSS ONLY]: Only GNSS core log data is saved.

   • [SENSOR ONLY]: Only sensor log data is saved.

   • [OFFLINE DATA]: Both GNSS and sensor log data is saved as offline data.

6. Select [DESTINATION], then press the **ENT** key. An options pop up window appears.

7. Select the appropriate option, then press the **ENT** key.

   • [USB]: Log data is saved to the USB Flash Memory.

   • [MP]: Log data is saved to the device connected via the Remote Maintenance port.

8. Close the [MENU].

2.17.5 How to clear display settings and GPS memory

You can reset the display settings and clear the GNSS (GPS) memory.

1. Open the [MENU].

2. Select [SYSTEM], then press the **ENT** key.

3. Select [RESET SETTING], then press the **ENT** key. The [RESET SETTINGS] menu appears.

4. Select the appropriate option, then press the **ENT** key. A confirmation window appears.
   Note: The [FACTORY DEFAULT] and [CLEAR ETHERNET SETTING] menu items are reserved for technical personnel and are not selectable.

```
RESET SETTINGS
1 CLEAR DISPLAY SETTING
2 CLEAR GNSS
  FACTORY DEFAULT
  CLEAR ETHERNET SETTING
```

5. Select [YES] to reset the settings, or [NO] to cancel.

2.17.6 How to restore IEC61162-450 default ethernet settings

You can reset the ethernet settings to the IEC61162-450 defaults, listed below.

- IP address: 192.168.0.1

- Sub-network mask: 255.255.255.0

- Default gateway: 0.0.0.0

To restore the IEC61162-450 default settings, do the following:

1. Open the [MENU].

2. Select [SYSTEM], then press the **ENT** key.

3. Select [RESET SETTINGS], then press the **ENT** key.

4. Select [CLEAR ETHERNET SETTING], then press the **ENT** key.
   Note: The [FACTORY DEFAULT] and [CLEAR ETHERNET SETTING] menu items are reserved for technical personnel and are not selectable.

5. Select [YES] to reset the settings, or [NO] to cancel.

2.18 ROTI Display Operations (RD-50/RD-20, option)

The optional RD-50/RD-20 Remote Display Unit is available as a remote display for ROTI data only. Operations and settings for the RD-50 are outlined in the RD-50 operator's manual (OME-44530-x; x denotes the manual version), supplied with the RD-50.

3. NMEA2000 I/O DATA

The SC-70/130 handle the NMEA2000 I/O data PGNs listed below. The LEN (Load Equivalency Number) is 1. LEN is the amount of current a device draws from the NMEA2000 network. 1 LEN = 50 mA.

3.1 Input Data

PGN	Name	Remarks			
059392	ISO Acknowledgement				
059904	ISO Request	Request for PGN output of Note1 in the output data table in section 3.2.			
060160	ISO Transport Protocol, Data Transfer				
060416	ISO Transport Protocol, Connection Management - BAM Group Function	BAM = Broadband Announce Message			
060928	ISO Address Claim				
061184	Self Test Group Function				
065240	ISO Commanded Address				
126208	NMEA-Request Group Function	Request for PGN output of Note 1, 2 and 3 in the output data table on the page 2, also interval change for regular PGN output in the output data table in section 3.2.			
	NMEA-Command Group Function	Standard PGNs and their changeable fields			
		PGN	Name	Field	Name
		060928	ISO Address Claim	#3	Device Instance Lower
				#4	Device Instance Upper
				#8	System Instance
		126998	Configuration Information	#1	Installation Description, Field 1
				#2	Installation Description, Field 2
				#3	Installation Description, Field 3
126996	Product Information				

3.2 Output Data

PGN	Name	Remarks	
059392	ISO Acknowledgement	-	Output for rejection of output request by ISO Request.
059904	ISO Request		
060928	ISO Address Claim	Note 1, 2	- Transmission at the time of address generation. - Output for receiving the output request by ISO Request.
061184	Self Test Group Function	-	- Proprietary PGN - Output for receiving the Self Test Group Function

PGN	Name		Remarks
065280	Heave	100 ms	- Proprietary PGN
126208	NMEA-Acknowledge Group Function	-	
126464	PGN List - Transmit PGN's Group Function	Note 1, 2	
	PGN List - Received PGN's Group Function	Note 1, 2	
126992	System Time	1000 ms	
126993	Heart Beat	60000 ms	
126996	Product Information	Note 1, 2	
126998	Configuration Information	Note 1, 2	
127250	Vessel Heading	100 ms	
127251	Rate of Turn	100 ms	
127252	Heave	100 ms	
127257	Attitude	100 ms	
127258	Magnetic Variation	1000 ms	
129025	Position, Rapid Update	100 ms	
129026	COG & SOG Rapid Update	250 ms	
129029	GNSS Position Data	1000 ms	
129033	Local Time Offset	Note 1, 2, 3	
129044	Datum	10000 ms	
129291	Set & Drift, Rapid Update	1000 ms	
129539	GNSS DOPs	1000 ms	
129540	GNSS Sats in View	1000 ms	
129545	GNSS RAIM Output	1000 ms	
129547	GNSS Pseudo Range Error Statistics	Note 1, 2	
130310	Environmental Parameters - DEPRECATED	500 ms	
130312	Temperature - DEPRECATED	2000 ms	
130314	Actual Pressure	2000 ms	
130316	Temperature, Extended Range	2000 ms	
130577	Direction Data	1000 ms	
130578	Vessel Speed Components	250 ms	
130822	Unit Division Code	Note 2	- Proprietary PGN
130823	Browser Control Status	Note 2	- Proprietary PGN
130842	Six Degrees of Freedom Movement	Note 2	- Proprietary PGN
130843	Heel Angle & Roll Information	100 ms	- Proprietary PGN
130845	Multi Sats In View Extended	Note 2, 3	- Proprietary PGN
130846	Motion Sensor Status Extended	Note 2, 3	- Proprietary PGN

Note 1: PGN to output independently when "PGN: 059904" or "PGN: 126208" requested.

Note 2: PGN to output independently when "PGN: 126208" requested.

Note 3: PGN to output regularly when "PGN: 126208" requested.

4. MAINTENANCE, TROUBLE-SHOOTING

4.1 Preventative Maintenance

Regular maintenance is necessary to maintain performance. A monthly maintenance program should be established and should at least include the items listed in the table below.

Item	Check point
Connectors	Check that all connectors on the rear panel of the Junction Box and display unit are firmly connected.
Cabling	Check cabling for damage. Replace if damaged.
Ground terminal	Check the ground terminal on the display unit and Junction Box for rust. Clean if necessary.
Ground wire	Check that the ground wire on the display unit and Junction Box is firmly fastened.
Display unit, Junction Box.	Dirt and dust should be removed from units with a soft, dry cloth. For the LCD, wipe it carefully to prevent scratching, using tissue paper and an LCD cleaner. To remove dirt or salt deposits, use an LCD cleaner, wiping slowly with tissue paper so as to dissolve the dirt or salt. Change paper frequently so the salt or dirt will not scratch the LCD. Do not use solvents such as thinner, acetone or benzene for cleaning any unit; they can remove paint and marks and deform the equipment.
Exposed nuts and bolts and sealant compound on cable gland of antenna unit (every three or six months)	• Check for corroded or loosened nuts and bolts. If necessary, clean and repaint them thickly. Replace them if heavily corroded. • Check for cracks and peeling in sealing compound on cable gland. • Sealing compound can be used instead of paint. Apply a small amount of grease between nuts and bolts for easy removal in future. • Apply sealing compound to minor cracks or peeling. If the problem is severe, completely remove sealant then reapply.

4.2 Replacement of Fuse

The Junction Box (SC-701) contains fuses which protects the equipment from overvoltage, reverse polarity and equipment fault. If power cannot be turned on, check if the fuse has blown.

Only a qualified technician should change the fuse, contact your dealer and quote the fuse details listed below.

⚠ **WARNING**

Use the proper fuse.
Use of a wrong fuse can damage the equipment or cause fire.

Used for	Fuse type	Code No.
SC-701	FBGO-A 125V 3A PBF	000-155-850-10
SC-702	FGMB 125V 0.3A PBF	000-176-821-10

4.3 Basic Troubleshooting

This section provides basic troubleshooting which the user may follow to restore normal operation. If the problem is not rectified, contact your dealer for advice.

Symptom	Possible cause and remedy
Cannot turn the power on.	Power cables may be damaged or corroded. Check the cables for corrosion or damage; replace as necessary.
	Power cable may be loose or disconnected. Check the cable connections are fastened firmly.
	Blown fuse. Check the fuses. If blown, contact your dealer for replacement.
	Ship battery may have low voltage. Check that the battery voltage is within rating.
Display screen is blank.	Brilliance level may be too low. Press the **BRILL** key to adjust the brilliance.
No position fix.	Antenna cable may be loose or disconnected. Check the antenna cable is fastened firmly.
	Unable to see more than two satellites. Check that there are no large obstructions preventing a clear view to the sky.
	GPS needs to be restarted. From the main menu, select [SYSTEM]→[RESET SETTINGS]→[CLEAR GNSS]→[YES].
Large error between actual and indicated location.	Positioning system may be incorrect or sensor is faulty. From the main menu, select [GNSS]. Confirm that the settings for [POSN. SYSTEM] and [MODE] are correct.
Heading indication changes randomly when the vessel is anchored or does not change when the vessel is moving.	Antenna may be poorly located or unable to obtain a positioning fix. 1) Check that the antenna has a clear view to the sky. 2) Check that the installation location is not subjected to excessive vibrations. 3) Check that there the antenna is not subject to interference from nearby equipment
	Sensor may be faulty. 1) Check the sensor status from the [SENSOR] menu. 2) Run a [DIAGNOSTIC TEST] from the [MAINTENANCE] menu. If one or more sensors are faulty, contact your dealer for advice.
Data output from the SC-70/SC-130 does not appear on external equipment.	Connection between the SC-70/SC-130 and external equipment is loose or damaged. Check connection, replace or reconnect/refasten as necessary.
	Output settings are incorrect. From the main menu, select [I/O], then select the output port. Confirm that the settings are correct.
	Sensor may be faulty. 1) Check the sensor status from the [SENSOR] menu. 2) Run a [DIAGNOSTIC TEST] from the [MAINTENANCE] menu. If one or more sensors are faulty, contact your dealer for advice.
	External equipment not set correctly. 1) Check the external equipment data input settings. 2) Output data and input data connection should set as follows: SC70/SC-130=TD-A ←connection→ external equipment=RD-A SC70/SC-130=TD-B ←connection→ external equipment=RD-B
The external equipment can not received NMEA2000 data from SC-70/SC-130.	Turn on the NMEA2000 network before the SC-70/SC-130. If the SC-70/SC-130 is turned on before the NMEA2000 network, reboot the SC-70/SC-130.

4.4 Maintenance Menu

The [MAINTENANCE] menu contains items such as diagnostic tests, unit information and other maintenance-specific menus. You can also save or load your user settings from this menu.

To access the [MAINTENANCE] menu, open the [MENU], then select [MAINTENANCE]. The [MAINTE-NANCE] menu appears.

4.4.1 How to find unit information

You can view your equipment's details from the [INFORMATION] menu. The displayed details include handy information such as program numbers and serial numbers.

1. From the [MAINTENANCE] menu, select [INFORMATION], then press the **ENT** key.
2. Select the unit whose information you want to view, then press the **ENT** key.
3. Select the part of the unit whose information you want to view, then press the **ENT** key.
   Items shown in gray are either not selectable, or have no information to view.
   Press ▲ or ▼ to scroll through the displayed information.

4.4.2 How to Backup User Settings

If a USB Flash Memory is connected at installation (see section 1.5.5), the SC-70/SC-130 can import or export user settings via external USB flash memory. This allows you to apply the same settings to multiple units, or recover settings if they are accidentally changed.

Note: The menu is inoperable while importing or exporting settings. Also, the import/export procedure cannot be stopped once it starts. For safety, conduct these operations while moored safely.

To import or export settings, do the following:

1. Open the [MENU].
2. Select [MAINTENANCE], then press the **ENT** key.
3. Select [IMPORT/EXPORT], then press the **ENT** key.
4. Select [IMPORT USER SETTINGS] or [EXPORT USER SETTINGS] as appropriate, then press the **ENT** key. A confirmation pop up window appears.
5. Select [YES] to import/export the user settings, [NO] to cancel the import/export. If [YES] is selected, a progress widow appears, showing the overall progress of the import/export.
   If an error occurs during the import/export, an error message appears. Referring to the table on the following page, take the appropriate action.

Error message	Meaning	Recommended action
"NO USB!"	No USB flash memory is connected to this unit.	Press the **MENU ESC** key to close the pop up. Check the connection. If a flash memory is connected, the USB connector/cable may be damaged, contact your dealer.
"ERROR DETECTED IN SETTINGS TRANSFER! RESTORING PREVIOUS SETTINGS."	Data transfer to/from the USB flash memory was interrupted/ stopped. This unit will restore the settings used prior to import.	Press the **ACK** key to close the pop up and start restoring the settings.
"NOT ENOUGH SPACE ON USB."	USB flash memory does not have enough space to save the settings.	Delete unnecessary files from the USB or use a USB with sufficient memory.
"NO FILE FOUND ON USB."	There is no settings file saved on the connected USB.	Connect the correct USB.
"OTHER BACKUP PROCESS IS RUNNING."	Import/export was attempted while a separate backup (or log) is in progress.	Wait for the other backup/log to complete, then try again.

6. When the import/export is complete the progress window is replaced with a pop up window displaying the message "IMPORT COMPLETE" or "EXPORT COMPLETE".

7. Press the **ENT** key. The last used display screen appears.

8. Open the [MENU].

9. Select [SYSTEM], then press the **ENT** key.

10. Select [USB FLASH DRIVE], then press the **ENT** key.

11. Select [UNMOUNT], then press the **ENT** key.

12. Close the [MENU].

How to remove the USB Flash Memory

To remove the USB Flash Memory, open the MENU, then select [SYSTEM] → [USB FLASH DRIVE] → [UNMOUNT]. When the process is completed, the message "YOU CAN REMOVE THE USB SAFELY" appears. Remove the USB Flash Memory.

4.5 Diagnostic Tests

The [DIAGNOSTICS] menu has several diagnostic tests which may help find the cause of a problem. To access the [DIAGNOSTICS] menu, do the following:

1. Press the **MENU ESC** key to access the menu.

2. Select [MAINTENANCE], then press the **ENT** key.

3. Select [DIAGNOSTICS], then press the **ENT** key.
   The following tests are available:

[MEMORY] TEST	: See section 4.5.1.
[KEY TEST]	: See section 4.5.2.
[LCD TEST]	: See section 4.5.3.
[AUTOMATIC TEST]	: See section 4.5.4.
[MANUAL TEST]	: For technical personnel only.
[SOUND TEST]	: See section 4.5.5.

4. Select the appropriate test, then press the **ENT** key.

5. Close the [MENU].

4.5.1 Memory test

The [MEMORY] test checks RAM, ROM, USB, LAN ports and data ports for the Junction Box (SC-701), the display unit (SC-702) and the antenna unit (SC-703/SC-1303).

Tested unit name appears here
Press the ▲ or ▼ to cycle through the test result for each tested unit.

Press the **MENU ESC** key to close the results screen and return to the [SELF TEST] menu, or press the **ENT** key to repeat the test.

4.5.2   Keyboard test

The [KEYBOARD] test checks that the keys are functioning correctly.
Keys are highlighted when the corresponding key is
pressed. Press the key again and the highlight is removed.

If a key is malfunctioning, contact your dealer.

To close this test screen, press the **MENU ESC** key three times.

4.5.3   LCD test

The [TEST PATTERN] test checks the LCD display colors and patterns. This test
changes the display color and shows patterns.

The test start screen shows operational guidance for the LCD test, as shown in the
figure below.
Press the **ENT** key to continue the test, or press the **MENU ESC** key to abort the test.

The colors and patterns appear in the order shown below.
If the colors are not displayed correctly, or show signs of LCD damage, contact your
dealer.

4.5.4 Automatic Test

The [AUTOMATIC TEST] conducts a brief test on the LCD, keyboard (SC-702) and memory (SC-701, SC-702 and SC-703).

This saves you the time it takes to conduct each test individually. If an error is detected during any of the automatic tests, the test stops. Check the item in question and consult your dealer if necessary.

The [AUTOMATIC TEST] does the following in numerical order:

1. Displays the PC board version numbers and program version numbers for the display unit, junction box and the connected antenna. Results are displayed for approximately five seconds, then section 2 is initiated.
2. Tests RAM/ROM and data input/output. (See section 4.5.1.) Results are displayed for approximately five seconds, then step 3 is initiated.
3. Tests the SC-702 keys. (See section 4.5.2.) Proceeds to step 4 if no key is pressed within five seconds.
4. Tests the LCD. (See section 4.5.3.) Displayed test screens changes after two seconds until the "checkered flag" screen appears. Proceeds to step 5 if no key is pressed within five seconds.
5. Tests screen brilliance. Press the **BRILL** key to cycle through the brilliance settings in the following order:

Maximum brilliance → Medium brilliance → Minimum brilliance

Repeats the tests from step 1 if no key is pressed within five seconds.
To exit this test, press the **MENU ESC** key.

Note: The SC-70/SC-130 continues data output while this test is active.

4.5.5 Sound test

Use the sound test to check the buzzer. Press ▲ or ▼ to change the buzzer's sound frequency.

The frequency range is 1400 (Hz) to 1850 (Hz).

Note: The settings used for the sound test are not saved.

This page is intentionally left blank.

APPENDIX 2 ALERT LIST

The table below shows the alert no., alert name, text, priority, meaning and remedy for each alert.
The alerts table is grouped by device mode. Alerts are not shared between device modes.
Note 1: "Inst." in the following tables denotes "Instance number" for the alert.
Note 2: "GNSS CORE(4) FAULT" appears only if SC-1303 is connected to the system.
Note 3: SC-70/130 alerts are output only as navigation cluster alerts.
Note 4: In accordance with IEC62923, signals from the Data1 port (IEC61162-2), Data 2 through 5 ports (IEC61162-1) and/or LAN port (61162-450) can be connected to a CAM device for alert management.
Note 5: The BAM function type for the SC-70 and SC-130 is "P".

ALERT I/F1 and LEGACY Alerts

No.	Inst.	Alert name	Text	Priority/ Category	Meaning
210*	—	HDOP exceeded	HDOP EXCEEDED	Caution/ B	The value of HDOP (Horizontal Dilution of Precision) is 4 or above.
212	—	Loss of position	LOSS OF POSITION	Warning/ B	Position data connection is interrupted or physically disconnected.
301*	—	Dead-Reckoning	DEAD-RECKONING	Caution/ B	The heading is calculated using ROT, not GPS position.
302	—	Output stopped (HDG)	OUTPUT STOPPED (HDG)	Warning/ B	Heading data connection is interrupted or physically disconnected.
303	—	Output stopped (ROT)	OUTPUT STOPPED (ROT)	Warning/ B	ROT data is connection is interrupted or physically disconnected.
311	—	Output stopped (SPD)	OUTPUT STOPPED (SPD)	Warning/ B	Speed data is connection is interrupted or physically disconnected.
Remedy: If the same state continues for five minutes, contact your dealer.					

*: When the SC-70/130 [TYPE APPROVAL] is set as [RUSSIA] at installation, these alerts are assigned the priority and category of "Warning/B".

ALERT I/F2 Alerts

Note 1: All ALERT I/F2 Warning level alerts have responsibility transfer function. Caution level alerts are not transfered.
Note 2: All ALERT I/F2 Warning level alerts are escalated as Warning level alerts if they are not acknowledged or rectified within five minutes.

No.	Inst.	Alert name	Text	Priority/ Category	Meaning
GPS mode alerts					
3056	1	HDOP EXCEEDED	HDOP EXCEEDED	Caution/B	The value of HDOP (Horizontal Dilution of Precision) is 4 or above.
Remedy: If the same state continues for five minutes, contact your dealer.					
3008	1	LOSS OF POSITION	GNSS CORE(1) FAULT	Warning/ B	GNSS module may be faulty.
	5		TOO FEW TRACKING SATELLITES		Not enough satellites available to fix position.
	6		ANTENNA UNIT CONNECTION LOST		Data connection to the antenna has been interrupted or the physical connection is disconnected.
Remedy: If the same state continues for five minutes, contact your dealer.					
THD mode alerts					
3016	2	LOST GNSS SIGNAL	GNSS CORE(2) FAULT	Caution/B	GNSS module may be faulty.
	3		GNSS CORE(3) FAULT		GNSS module may be faulty.
	4		GNSS CORE(4) FAULT		GNSS module may be faulty. **Note:** Shown only for system configurations with SC-1303 included.
	5		TOO FEW COMMON SATELLITES		Not enough satellites available to fix position.
Remedy: If this alert occurs frequently, contact your dealer. **Note:** The "LOST GNSS SIGNAL" alerts (3016.x) are changed to "LOST HDG OUTPUT" alerts (3008,x) alerts if they are not rectified or fixed within the time period set at [DR TIME] (dead reckoning time) in the menu.					
3008	2	LOST HDG OUTPUT	GNSS CORE(2) FAULT	Warning/ B	GNSS module may be faulty.
	3		GNSS CORE(3) FAULT		GNSS module may be faulty.
	4		GNSS CORE(4) FAULT		GNSS module may be faulty. **Note:** Shown only for system configurations with SC-1303 included.
	5		TOO FEW COMMON SATELLITES		Not enough satellites available to fix position.
	6		ANTENNA UNIT CONNECTION LOST		Data connection to the antenna has been interrupted or the physical connection is disconnected.

No.	Inst.	Alert name	Text	Priority/ Category	Meaning
3008	7	LOST HDG OUTPUT	RATE GYRO BROKEN DOWN	Warning/ B	Rate gyro may be faulty.
	8		ACCELEROME- TER BROKEN DOWN		Accelerometer may be faulty.
	10		NO EXTERNAL HDG		External heading data is not re- ceived for five seconds.
	18		INTERNAL HDG ERROR		Abnormal internal heading data is detected.
	19		SETTLING FAILURE		Unable to obtain a stable head- ing for more than 10 minutes af- ter start-up. **Note:** Appears when the unit is set to [RUSSIA] at installation.
Remedy: If the same state continues for five minutes, contact your dealer.					
ROTI mode alerts					
440303	2	ROT STOPPED	GNSS CORE(2) FAULT	Warning/ B	GNSS module may be faulty.
	3		GNSS CORE(3) FAULT		GNSS module may be faulty.
	4		GNSS CORE(4) FAULT		GNSS module may be faulty. **Note:** Shown only for system configurations with SC-1303 in- cluded.
	5		TOO FEW COM- MON SATELLITES		Not enough satellites available to fix position.
	6		ANTENNA UNIT CONNECTION LOST		Data connection to the antenna has been interrupted or the physical connection is discon- nected.
	7		RATE GYRO BRO- KEN DOWN		Rate gyro may be faulty.
	8		ACCELEROME- TER BROKEN DOWN		Accelerometer may be faulty
	18		INTERNAL ROT ERROR		Abnormal internal ROT data is detected.
	19		SETTLING FAILURE		Unable to obtain a stable head- ing for more than 10 minutes af- ter start-up. **Note:** Appears when the unit is set to [RUSSIA] at installation.
Remedy: If the same state continues for five minutes, contact your dealer.					
SPD mode alerts					
440311	2	SPD STOPPED	GNSS CORE(2) FAULT	Warning/ B	GNSS module may be faulty.
	3		GNSS CORE(3) FAULT		GNSS module may be faulty.

No.	Inst.	Alert name	Text	Priority/ Category	Meaning
440311	4	SPD STOPPED	GNSS CORE(4) FAULT	Warning/ B	GNSS module may be faulty. **Note:** Shown only for system configurations with SC-1303 included.
	5		TOO FEW COMMON SATELLITES		Not enough satellites available to fix position.
	6		ANTENNA UNIT CONNECTION LOST		Data connection to the antenna has been interrupted or the physical connection is disconnected.
	7		RATE GYRO BROKEN DOWN		Rate gyro may be faulty.
	8		ACCELEROMETER BROKEN DOWN		Accelerometer may be faulty
Remedy: If the same state continues for five minutes, contact your dealer.					

APPENDIX 3 ABBREVIATIONS AND UNITS

Term	Meaning	Term	Meaning

APPENDIX 4 ICONS AND SYMBOLS

Standard icons and their meanings

Icon	Meaning		Icon	Meaning
See note below.	Excessive vibrations detected at the antenna installation location. Check the antenna installation location and change if necessary.		Shown in light blue for IMO types, dark-blue for non-IMO types.	Blue indication rotates in a clock-wise direction, indicating that the equipment is functioning correctly. If this indication is not moving, the system may be frozen. Restart the system. If the problem recurs, contact your dealer.
PRECISION PRECISION See note below.	Indicates that five or more satellites are under use for calculating velocity and own ship's movement.		SIM	Simulation icon. The system is currently operating in simulation mode.

Note: Icon background color changes according to the SC-702 background color.

Alert icons and their meanings

Icons	Meaning		Icons	Meaning
	Active, unacknowledged warning			Active, responsibility transferred warning (See section 2.11.7)
	Silenced warning			Active, acknowledged warning
	Rectified, unacknowledged warning			Caution

APPENDIX 5 GEODETIC CHART CODES

001: WGS84
002: WGS72
003: TOKYO : Mean Value (Japan, Korea & Okinawa)
004: NORTH AMERICAN 1927 : Mean Value (CONUS)
005: EUROPEAN 1950 : Mean Value
006: AUSTRALIAN GEODETIC 1984 : Australia & Tasmania

175: CK95 : Russia

APPENDIX 6 WHAT IS SBAS?

A satellite based augmentation system, or SBAS (Satellite Based Augmentation System), is an augmentation system that uses additional messages from satellite broadcasts to support regional and wide area augmentation. SBAS provides GPS signal corrections to SBAS users, for even better position accuracy, through the GPS error corrections that are widely broadcast from the geostationary satellite.

SBAS is used in America, Europe, Japan and India.

- America: WAAS (Wide Area Augmentation System)
- Europe: EGNOS (Euro Geostationary Navigation Overlay Service)
- Japan: MSAS (Multi-Functional Satellite Augmentation System)
- India: GAGAN (GPS And GEO Augmented Navigation)

These four systems have interoperability. The illustration below shows the coverage area for each provider. This manual uses "SBAS" for these four providers generically.
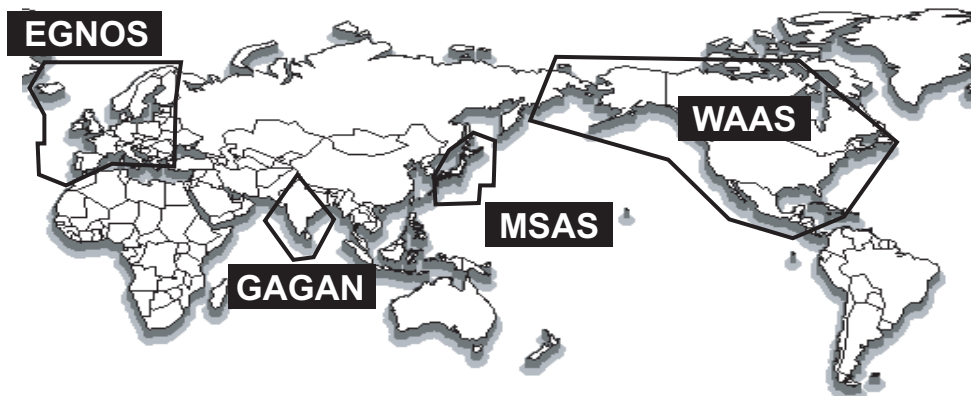

Provider	Satellite type	Longitude	Satellite No.
WAAS	Intelsat Galaxy XV	133°W	135
	TeleSat Anik F1R	107.3°W	138
	Inmarsat-4-F3	98°W	133
EGNOS	Inmarsat-3-F2/AOR-E	15.5°W	120
	Inmarsat-4-F2	25°E	126
	SES-5	5°E	136
MSAS	MTSAT-1R	140°E	129
	MTSAT-2	145°E	137
GAGAN	GSAT-8	55°E	127
	GSAT-10	83°E	128

As of March 6th, 2014

APPENDIX 7 DIGITAL INTERFACE (IEC 61162-1 EDITION 5)

Serial data sentences

Input: ACK, ACN (ACM), HBT, HDT*[1], MSK, MSS, THS, VBW*[2], VDR*[2]

Output: ALC, ALF, ALR, ARC, DTM, GBS, GGA, GLL, GNS, GRS, GSA, GST, GSV, HBT, HDG*[2], HDM*[2], HDT*[1], HRM*[2], MSK, POS, RMC, ROT, THS, VBW*[2], VDR*[2], VHW*[2], VLW*[2], VTG, XDR*[2], ZDA

Ethernet sentences

Input: ACK, ACN (ACM), HBT, SRP

Output: ALC, ALF, ALR, ARC, DTM, GBS, GLL, GNS, GRS, GSA, GST, GSV, HBT, HDG, HDM, HDT*[1], HRM*[2], POS, RMC, ROT, SRP, THS, VBW*[2], VDR*[2], VHW*[2], VLW*[2], VTG, XDR*[2], ZDA

*[1]: Not used for new SOLAS vessels.

*[2]: For Non-IMO types only.

Transmission Interval

Sentence	Available intervals
DTM*/GBS/GGA/GLL/GNS/GRS/GSA/GST/GSV/RMC/ VBW/VDR/VHW/VLW/VTG/XDR/ZDA	0s, 1s, 2s
HDT/ROT/THS/HDG/HDM/HRM	20ms, 25ms, 100ms, 200ms, 1s, 2s
ALC/ALF/ALR/ARC/MSK	Fixed (Not changeable).

*: Fixed for IMO type vessels.

Load requirements as listener

Isolation: Photo coupler
Input impedance: 470 ohms
Max. voltage: ±15 V
Threshold: 3 mA (in case of connection with FURUNO device talker)

Data transmission

Data is transmitted in serial asynchronous form in accordance with the standard referenced in IEC 61162-1 and IEC 61162-2. The first bit is a start bit and is followed by data bits.

The following parameters are used:Baud rate: 4800 for IEC61162-1, 38400 for IEC-61162-2Data bits: 8 (D7 = 0), parity noneStop bits: 1datagram type and IGMP protocol.IEC61162-1: Edition 5.0 2016, Edition 4.0 2010-11, Third edition 2007-04IEC61162-2: First Edition 1998-09IEC61162-450: Edition 2.0 2018-05, Datagram type: UdPbCIGMP protocol: IGMPv2

## Schematic diagrams

Data ports 2 through 5
*: Numerals in bold change as follows, with their respective terminal blocks.
TB4: **4**; TB5: **3**; TB6: **2**

Data port 1

Sentence description (Input)

• ACK: Acknowledge Alarm

$**ACK,xxx,*hh<CR><LF>
　　　　1
1. Local alarm number (identifier) (000 to 999)

• ACN (ACM): Alert Command

$**ACN,hhmmss.ss,aaa,x.x,x.x,c,a*hh<CR><LF>
　　　　　　1　　　2　3　4 5 6
1. Time (UTC,unused)
2. Manufacturer mnemonic code (3 digits)
3. Alert Identifier (000 - 999999)
4. Alert Instance (1 - 999999,unused)
5. Alert command (A,Q,O,S)
   A=acknowledge
   Q=request/repeat information
   O=responsibility transfer
   S=silence
6. Sentence status flag(C) (fixed)

- HBT: Heartbeat Supervision Sentence

  $**HBT,x.x,A,x*hh<CR><LF>
        1 2 3
  1. Configured repeat interval (1 to 999(s))
  2. Equipment status (A=Normal V=System fail)
  3. Sequential sentence identifier (0 to 9)

- HDT: Heading, true

  $**HDT,xxx.x,T*hh<CR><LF>
         1 2
  1. Heading, degrees (0.0 to 360.0)
  2. True (T)

- MSK: Receiver Interface Command

  $**MSK,x.x,a,x.x,a,x.x,x,a *hh<CR><LF>
         1 2 3 4 5 6 7
  1. Beacon frequency, kHz (283.45 to 325.04)
  2. Auto/Manual frequency (See note 2) (A=Auto, M=Manual)
  3. Beacon bit rate, bits/s (25, 50, 100, 150, 200)
  4. Auto/Manual beacon bit rate (See note 2) (A=Auto, M=Manual)
  5. Interval for sending $**MSS (status) in seconds (See note 1) (1 to 99, null))
  6. Channel number (See note 3) (Fixed at 1)
  7. Sentence status flag (See note 4) (R, C) (R=Sentence status is a report of current settings (use for a reply to a query, C=Sentence is a configuration command to change settings. A sentence without "C" is not a command.)

  Notes:
  1) When status data is not to be transmitted this field is "null".
  2) If Auto is specified the previous field value is ignored.
  3) Set equal to "1" or null for single channel receiver.
  4) This field is used to indicate a sentence that is a status report of current settings or a configuration command changing settings. This field should not be null.

- MSS: MSK Receiver Signal Status

  $**MSS,x.x,x.x,x.x,x.x,x *hh<CR><LF>
        1 2 3 4 5
  1. Signal strength (SS), dB/(1µV/m) (0.0 to 999.94)
  2. Signal-to-noise ratio (SN), dB (0.0 to 999.94)
  3. Beacon frequency, kHz (283.5 to 325.04)
  4. Beacon bit rate, bits/s (25, 50, 100, 200)
  5. Channel number (1,null)(Set to "1" or "null" for single channel receivers.)

- SRP - System Function ID Resolution Protocol

  $--SRP,x,hhhhhhhhhhhh,c--c*hh<CR><LF>
       1   2   3
  1. Instance number for interface redundancy (i.e. number of physical port for identical SFI), null if interface redundancy not in use. The instance numbers shall be ordinal with no skipping (1, 2, 3,…).
  2. Reported MAC address used by SFI, 48bit hexadecimal number, for example 32613C4EB605
  3. Reported IP address used by SFI as text string, for example 239.192.0.1

AP-15

- THS: True Heading And Status

$**THS,x.x,a*hh<CR><LF>
            1   2
1. Heading, degrees True (0.0 to 360.0)
2. Mode indicator (A=Autonomous, S=Simulator)

- VBW: Dual Ground/water Speed

$**VBW,x.x,x.x,a,x.x,x.x,a,x.x,a,x.x,a*hh<CR><LF>
            1   2   3   4   5   6   7   8   9   10
1. Longitudinal water speed, knots (-999.994 to 999.994, null)
2. Transverse water speed, knots (-999.994 to 999.994, null)
3. Status: water speed (A=Data valid)
4. Longitudinal ground speed, knots (unused)
5. Transverse ground speed, knots (unused)
6. Status: ground speed, (A=Data valid, V=Data invalid)
7. Stern transverse water speed, knots (-999.994 to 999.994, null)
8. Status: stern water speed (A=Data valid)
9. Stern transverse ground speed, knots (unused)
10. Status: stern ground speed, (A=Data valid, V=Data invalid)

- VDR: Set and Drift

$**VDR,x.x,T,x.x,M,x.x,N*hh <CR><LF>
            1   2   3   4   5   6
1. Direction, degrees True (0.0 to 360.0,null)
2. T=True (fixed)
3. Direction, degrees Magnetic (0.0 to 360.0,null)
4. M=Magnetic (fixed)
5. Current speed (0 to 99.99)
6. N=Knots (fixed)

- Proprietary sentences: GPatt, GPhve, Ilals, pireq.

Sentence description (Output)

- ALC: Cyclic Alert List

$**ALC,xx,xx,xx,x.x, aaa,x.x,x.x,x.x,"""""*hh<CR><LF>
            1 2   3   4   5   6   7   8   9
1. Total number of sentences this message (01 to 99)
2. Sentence number (01 to 99)
3. Sequential message identifier (00 to 99)
4. Number of alert entries (0 to 2)
5. Manufacturer mnemonic code (FEC, null)
6. Alert identifier (000 to 999999)
7. Alert instance (1 to 999999)
8. Revision counter (1 to 99)
9. Additional alert entries (same as 5 to 8)

- ALF: Alert Sentence

$**ALF,x,x,x,hhmmss.ss,a,a,a,aaa,x.x,x.x,x.x,x,c--c*hh<CR><LF>
       1 2 3   4   5 6 7 8   9 10 11 12 13

1. Total number of ALF sentences this message (1, 2)
2. Sentence number (1, 2)
3. Sequential message identifier (0 to 9)
4. Time of last change (hh=00 to 23, mm=00 to 59, ss.ss=00.00 to 59.99), null
5. Alert category (B=Alert category B,), null when #2 is 2.
6. Alert priority (W=Warning, C=Caution), null when #2 is 2.
7. Alert state (V=Not ACKed, S=Silence, A=ACked, O/U=Resolved, Not ACKed, N=Normal state), null when #2 is 2.
8. Manufacturer mnemonic code (FEC, null)
9. Alert identifier (000 to 999999)
10. Alert instance (1 to 999999)
11. Revision counter (1 to 99)
12. Escalation counter (0 to 9)
13. Alert text (when #2 =1: max. 16 characters; when #2=2: max. characters according to regulation)

- ALR: Set Alarm State

$**ALR,Hhmmss.ss,xxx,A,A,c—c*hh<CR><LF>
          1   2 3 4 5

1. Time of alarm condition change, UTC (000000.00 to 235959.99), null
2. Unique alarm number (identifier) at alarm source (000 to 999),null
3. Alarm condition (A=threshold exceeded, V=threshold not exceeded)
4. Alarm acknowledge state (A=acknowledged, V=not acknowledged)
5. Alarm description text (alphanumeric), null

- ARC: Alert Command Refused

$**ARC,hhmmss.ss,aaa,x.x,x.x,c*hh<CR><LF>
           1   2   3 4 5

1. Release time of the Alert Command Refused (UTC)
2. Used for proprietary alerts, defined by the manufacturer (FEC,null)
3. The alert identifier (000 to 999999)
4. The alert instance (1 to 999999)
5. Refused Alert Command(A, Q, O, S)
  A=acknowledge
  Q=request/repeat information
  O=responsibility transfer
  S=silence

- DTM: Datum Reference

$**DTM,ccc,a,x.x,a,x.x,a,x.x,ccc*hh<CR><LF>
         1 2 3 4 5 6 7 8

1. Local datum (W84:WGS84; W72:WGS72; P90:PZ90; User defined:999, IHO datum code)
2. Local datum subdivision code (null or one character)
3. Lat offset, minutes (0 to 59.9999)
4. N/S
5. Lon offset, min (0 to 59.9999)
6. E/W
7. Altitude offset, meters (null)
8. Reference datum (W84:WGS84; W72:WGS72; P90:PZ90)

- GBS: GNSS Satellite Fault Detection

$**GBS, hhmmss.ss, x.x, x.x, x.x, xx, x.x, x.x, x.x, h, h *hh<CR><LF>
           1   2   3   4 5   6   7   8 9 10

1. UTC time of GGA or GNS fix associated with this sentence (000000.00 to 235959.99)
2. Expected error in latitude (0.00 to 999.99),null
3. Expected error in longitude (0.00 to 999.99),null
4. Expected error in altitude (0.00 to 999.99),null
5. ID number of most likely failed satellite (1 to 255),null
6. Probability of missed detection for most likely failed satellite (0.00 to 100.00),null
7. Estimate of bias in meters on most likely failed satellite (-999.99 to 999.99),null
8. Standard deviation of bias estimate (0.00 to 999.99), null
9. GNSS system ID (1 to F)
10. GNSS signal ID (0 to F)

- GGA - Global Positioning System Fix Data

$**GGA,hhmmss.ss,llll.lll,a,yyyyy.yyy,a,x,xx,x.x,x.x,M,x.x,M,x.x,xxxx*hh<CR><LF>
              1   2 3   4   5 6 7 8   9 10 11 12 13 14

1. UTC of position (000000.00 to 235959.99)
2. Latitude (0000.0000 to 9000.00000)
3. N/S
4. Longitude (0000.0000 to 18000.00000)
5. E/W
6. GPS quality indicator (0 to 8)
7. Number of satllite in use (00 to 99)
8. Horizontal dilution of precision (0.0 to 99.9)
9. Antenna altitude above/below mean sea level (-9999 to 9999)
10. Unit, (Fixed at m)
11. Geoidal separation (-9999 to 9999)
12. Unit, (Fixed at m)
13. Age of differential GPS data (0 to 299) ,null
14. Differential reference station ID (0000 to 1023),null

- GLL: Geographic Position - Latitude/Longitude

$**GLL,llll.lll,a,yyyyy.yyy,a,hhmmss.ss,a,x*hh<CR><LF>
       1 2   3   4   5   6 7

1. Latitude (0000.0000 to 9000.0000)
2. N/S
3. Longitude (0000.0000 to 18000.0000)
4. E/W
5. UTC of position (000000.00 to 235959.99)
6. Status (A=data valid V=data invalid)
7. Mode indicator (A=Autonomous, D=Differential, E=Estimated (dead reckoning), M=Manual input,
   S=Simulator, N=Data not valid)

- GNS: GNSS Fix Data

$**GNS,hhmmss.ss,llll.lll,a,lllll.lll,a,c--c,xx,x.x,x.x,x.x,x.x,x.x,a*hh<CR><LF>
            1   2 3 4   5 6   7 8 9 10 11 12 13

1. UTC of position (000000.00 to 235959.99)
2. Latitude (0000.0000 to 9000.0000)
3. N/S
4. Longitude (0000.0000 to 18000.0000)
5. E/W
6. Mode indicator
   N=No fix A=Autonomous D=Differential P=Precise R=Real Time Kinematic
   F=Float RTK E=Estimated Mode M=Manual Input Mode S=Simulator Mode
7. Total number of satellites in use (00 to 99)
8. HDOP (0.0 to 50.0)
9. Antenna altitude, meters (-9999 to 9999)
10. Geoidal separation (-9999 to 9999)
11. Age of differential data (0 to 99)
12. Differential reference station ID (0000 to 1023)
13. Naivgational status indicator
    S=Safe C=Caution U=Unsafe V=Navigational status not valid

AP-18

- GRS: GNSS Range Residual

$**GRS,hhmmss.ss,x,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,h,h*hh<CR><LF>

```
                      ↑     ↑        ‾‾‾‾‾‾‾‾‾‾‾‾‾         ↑ ↑
                      1     2          3 to 14           15 16
```

1. UTC time of GGA/GNS fix
2. Mode: 0=Residuals were used to calculate the position given in the matching GGA or GNS sentence; 1=Residuals were recomputed after the GGA or GNS position was computed
3. Range residuals in meters for satellites used in the navigation solution (-99 to 99, null) See notes 1&2.

4 to 14. Same as #3.

15. GNSS System ID (1 to F; 1=GP, 2=GL, 3=GA, 4 to F=RESERVED)
16. Signal ID (0 to F)

Notes:

1) If the range residual exceeds +99.9 meters, then the decimal part is dropped, resulting in an integer (-13.7 becomes -13). The maximum value for this field is +99.
2) The sense or sign of the range residual is determined by the order of parameters used in the calculation.
   The expected order is as follows: range residual = calculated range - measured range.
3) When multiple GRS sentences are being sent then their order of transmission must match the order of corresponding GSA sentences.
   Listeners shall keep track of pairs of GSA and GRS sentences and discard data if pairs are incomplete.
4) Signal ID indentifies the actual ranging signal according to the Table below.
5) System ID according to Table below.

GRS Table

System	System ID	Satellite ID	Signal ID	Signal Channel
GPS	1 (GP)	1 to 99 1 to 32 is reserved for GPS 33 to 64 is reserved for SBAS 65 to 99 is undefined	0 1 2 3 4 5 6 7 8 9 to F	All Signals L1 C/A L1 P(Y) L1 M L2 P(Y) L2C-M L2C-L L5-I L5-Q Reserved

```

1. Mode (M=manual, forced to operate in 2=2D 3=3D mode
      A=automatic, allowed to automatically switch 2D/3D)
2. Mode (1=fix not available 2=2D 3=3D)
3. ID number of satellites used in solution (01 to 96, null)
4. PDOP (0.0 to 50.0),null
5. HDOP (0.0 to 50.0),null
6. VDOP (0.0 to 50.0),null
7. GNSS System ID (See GRS table:System ID)

- GST: GNSS Pseudorange Error Statistics

```
$**GST,hhmmss.ss,x.x,x.x,x.x,x.x,x.x,x.x,x.x *hh<CR><LF>
          1        2   3   4   5   6   7   8
```

1. UTC time fo the GGA or GNS fix. (000000.00 to 235959.99)
2. RMS value of the standard deviation of the range inputs to the navigation process. Range inputs include pseudoranges & DGNSS corrections. (1 to 999, null)
3. Standard deviation of semi-major axis of error ellipse (meters) (0 to 655.34, null)
4. Standard deviation of semi-minor axis of error ellipse (meters) (0 to 655.34, null)
5. Orientation of semi-major axis of error ellipse (degrees from true north) (0 to 180, null)
6. Standard deviation of latitude error (meters) (0 to 999.9, null)
7. Standard deviation of longitude error (meters) (0 to 999.9, null)
8. Standard deviation of altitude error (meters) (0 to 999.9, null)

- GSV: GNSS Satellites in View

```
$**GSV,x,x,xx,xx,xx,xxx,xx._____,xx,xx,xxx,xx, h *hh<CR><LF>
       1 2 3  4  5  6   7    8     9         10
```

1. Total number of messages (1 to 4)
2. Message number (1 to 4)
3. Total number of satellites in view (00 to 14)
4. Satellite ID number (01 to 96),null
5. Elevation, degrees (00 to 90),null
6. Azimuth, degrees true (000 to 359),null
7. SNR(C/No) (00 to 99(dB-Hz), null when not tracking)
8. Second and third SVs
9. Fourth SV
10. Signal ID (See GRS table:Signal ID)

- HBT - Heartbeat Supervision Sentence

```
$**HBT,x.x,A,x*hh<CR><LF>
        1  2 3
```

1. Configured repeat interval (50.0(s))(+1)
2. Equipment status (A=Normal)
3. Sequential sentence identifier (0 to 9)

- HDG: Heading, Deviation and Variation

```
$**HDG,x.x,x.x,a,x.x,a*hh<CR><LF>
        1   2  3  4  5
```

1. Magnetic sensor heading, degrees (0.0 to 359.9)
2. Magnetic deviation, degrees (0.0 to 180.0)
3. E/W
4. Magnetic variation, degrees (0.0 to 180.00)
5. E/W

AP-20

- HDM: Heading, Magnetic

  $**HDM,x.x,M*hh<CR><LF>
         1 2
  1. Heading, degrees (0.0 to 359.9)
  2. Magnetic (M)

- HDT: Heading, True

  $**HDT,xxx.x,T*hh<CR><LF>
           1 2
  1. Heading, degrees (0.0 to 359.9)
  2. True (T)

- HRM: Heel Angle, Roll Period and Roll Amplitude Measurement Device

  $**HRM,hhmmss.ss,x.x,x.x,x.x,A,x.x,x.x,hhmmss.ss,x.x,x.x *hh<CR><LF>
             1   2   3 4 5 6 7   8   9 10
  1. Actual heel angle, degrees (-89.999 to 89.999, null)
  2. Roll period, seconds (0 to 99.9, null)
  3. Roll amplitude, port side, degrees (0 to 89.999, null)
  4. Roll amplitude, starboard side, degrees (0 to 89.999, null)
  5. Status (A/V) A=Data valid, V=Data invalid
  6. Roll peak hold value, port side, degrees (null)
  7. Roll peak hold value, starboard side, degrees (null)
  8. Peak hold value reset time (fixed at null)
  9. Peak hold value reset day (fixed at null)
  10. Peak hold value reset month (fixed at null)

- MSK: Receiver Interface Command

  $**MSK,x.x,a,x.x,a,x.x,x,a *hh<CR><LF>
         1 2 3 4 5 6 7
  1. Beacon frequency, kHz (283.5 to 325.0, null)
  2. Auto/Manual frequency (See note 2) (A=Auto, M=Manual)
  3. Beacon bit rate, bits/s (25, 50, 100, 150, 200, null)
  4. Auto/Manual beacon bit rate (See note 2) (A=Auto, M=Manual)
  5. Interval for sending $**MSS (status) in seconds (See note 1) (Fixed at 5)
  6. Channel number (See note 3) (Fixed at 1)
  7. Sentence status flag (See note 4) (C - Sentence is a configuration command to change settings. A sentence without "C" is not a command.)

  Notes:
  1) When status data is not to be transmitted this field is "null".
  2) If Auto is specified the previous field value is ignored.
  3) Set equal to "1" or null for single channel receiver.
  4) This field is used to indicate a sentence that is a status report of current settings or a configuration command changing settings. This field should not be null.

- POS: Device Position and Ship Dimensions Report or Confirmation Command

```
$**POS,cc,xx,a,x.x,x.x,x.x,a,x.x,x.x,a*hh<CR><LF>
          1  2  3  4   5   6   7 8  9 10
```
1. Equipment ID (GP, GL, GA, GN, HE, HN, HC)
2. Equipment number (01 to 99)
3. Position validity flag (A=Valid V=Invalid)
4. Position X-coordinate (-999.9 to 999.9)
5. Position Y-coordinate (0 to 999.9)
6. Position Z-coordinate (0 to 999.9)
7. Ship's width and length (A=Valid)
8. Ship's width (000.0 to 999.9)
9. Ship's length (000.0 to 999.9)
10. Sentence status flag (R=Sentence is status report of current settings)

- RMC: Recommended Minimum Specific GNSS Data

```
$**RMC,hhmmss.ss,A,llll.ll,a,yyyyy.yy,a,x.x,x.x,ddmmyy,x.x,a,a,a*hh<CR><LF>
                 1     2  3    4    5   6   7   8     9    10 11 1213
```
1. UTC of position fix (000000.00 to 235959.99)
2. Status (A=data valid, V=navigation receiver warning)
3. Latitude (0000.0000 to 9000.0000)
4. N/S
5. Longitude (0000.0000 to 18000.0000)
6. E/W
7. Speed over ground, knots (0.000 to 9999.999)
8. Course over ground, degrees true (0.0 to 359.9)
9. Date (010100 to 311299)
10. Magnetic variation, degrees (0.0 to 180.0,null)
11. E/W (E/W,null)
12. Mode indicator (A=Autonomous mode, D=Differential mode, E=Estimated (DR), S=Simulator, M=Manual, N=Data not valid, P=Precise)
13. Navigational status indication (S=Safe C=Caution U=Unsafe V=Navigational status not valid)

- ROT: Rate of Turn

```
$**ROT,x.x,A *hh<CR><LF>
        1  2
```
1. Rate of turn, deg/min, "-"=bow turns to port (-9999.9 - 9999.9,null)
2. Status (A=data valid, V=data invalid)

- SRP - System Function ID Resolution Protocol

```
$--SRP,x,hhhhhhhhhhhh,c--c*hh<CR><LF>
        1      2           3
```
1. Instance number for interface redundancy (i.e. number of physical port for identical SFI), null if interface redundancy not in use. The instance numbers shall be ordinal with no skipping (1, 2, 3,…).
2. Reported MAC address used by SFI, 48bit hexadecimal number, for example 32613C4EB605
3. Reported IP address used by SFI as text string, for example 239.192.0.1

AP-22

- THS: True Heading & Status

  $**THS,x.x,a*hh<CR><LF>
         1 2
  1. Heading, degrees True (0.0 to 359.9 null)
  2. Mode indicator (A=Autonomous, E=Estimated, M=Manual input,
     S=Simulator V=Data not valid)

- VBW: Dual Ground/Water Speed

  $**VBW,x.x,x.x,a,x.x,x.x,a,x.x,a,x.x,a*hh<CR><LF>
        1 2 3 4 5 6 7 8 9 10
  1. Longitudinal water speed, knots (-999.999 to 999.999),null
  2. Transverse water speed, knots (-999.999 to 999.999),null
  3. Status: water speed, A=Data valid V=Data invalid
  4. Longitudinal ground speed, knots (-999.999 to 999.999),null
  5. Transverse ground speed, knots (-999.999 to 999.999),null
  6. Status: ground speed, A=Data valid V=Data invalid
  7. Stern transverse water speed, knots (-999.999 to 999.999),null
  8. Status: stern water speed, A=Data valid V=Data invalid
  9. Stern transverse ground speed, knots (-999.999 to 999.999),null
  10. Status: stern ground speed, A=Data valid V=Data invalid

- VDR: Set and Drift

  $**VDR,x.x,T,x.x,M,x.x,N*hh <CR><LF>
        1 2 3 4 5 6
  1. Direction, degrees (0.0 to 359.9),null
  2. T=True (fixed)
  3. Direction, degrees (0.0 to 359.9),null
  4. M=Magnetic (fixed)
  5. Current speed (0 to 99.99),null
  6. N=Knots (fixed)

- VHW: Water Speed and Heading

  $**VHW,x.x,T,x.x,M,x.x,N,x.x,K,*hh <CR><LF>
         1 2 3 4 5 6 7 8
  1. Heading, degrees (0.000 to 359.999, null)
  2. T=True (fixed)
  3. Heading, degrees (0.000 to 359.999, null)
  4. M=Magnetic (fixed)
  5. Speed, knots (-999.999 to 999.999, null)
  6. N=Knots (fixed)
  7. Speed, km/hr (-999.999 to 999.999, null)
  8. K=km/hr (fixed)

- VLW: Dual Ground/Water Distance

  $**VLW,x.x,N,x.x,N,x.x,N,x.x,N*hh<CR><LF>
        1 2 3 4 5 6 7 8
  1. Total cumulative water distance (null)
  2. N=Nautical miles
  3. Water distance since reset (null)
  4. N=Nautical miles
  5. Total cumulative ground distance (null)
  6. N=Nautical miles
  7. Ground distance since reset (0.00 to 999999.99)
  8. N=Nautical miles

- VTG: Course Over Ground and Ground Speed

  $**VTG,x.x,T,x.x,M,x.x,N,x.x,K,a*hh <CR><LF>
        1 2 3 4 5 6 7 8 9
  1. Course over ground, degrees (0.0 to 359.9),null
  2. T=True (fixed)
  3. Course over ground, degrees (0.0 to 359.9),null
  4. M=Magnetic (fixed)
  5. Speed over ground, knots (0.0 to 999.9),null
  6. N=Knots (fixed)
  7. Speed over ground (0.0 to 999.9),null
  8. K=km/h (fixed)
  9. Mode indicator (A=Autonomous, D=Differential, E=Estimated (dead reckoning),
     M=Manual input, S=Simulator, N=Data not valid, P=Precise)

- XDR: Transducer Measurements

  $**XDR, a, x.x, a, c--c, a, x.x, a, c--c *hh<CR><LF>
        1 2 3 4 5 6 7 8
  1. Transducer type, transducer no. 1 (C=Celcius, fixed)
  2. Measurement data, transducer no. 1 (-50.00 to 99.99)
  3. Units of measure (C=Celcuis, fixed)
  4. Transducer no.1 ID (AIRT, fixed)
  5. Transducer type, transducer no. 2 (P=Pressure, fixed)
  6. Measurement data, transducer no. 2 (0.00 to 120000.00)
  7. Units of measure (P=Pascal, fixed)
  8. Transducer no.2 ID (AIRP, fixed)

- ZDA: Time and date

  $--ZDA,hhmmss.ss,xx,xx,xxxx,xx,xx,*hh<CR><LF>
        1 2 3 4 5 6
  1. UTC (000000 to 235959)
  2. Day (01 to 31, UTC)
  3. Month (01 to 12, UTC)
  4. Year (0000 to 9999, UTC)
  5. Local zone, hours (-13 to ±13)
  6. Local zone, minutes (00 to ±59)

APPENDIX 8 PARTS LIST/LOCATION

Parts List

This equipment contains complex modules in which fault diagnosis and repair down to component level are not practical (IMO A.694(17)/8.3.1). Only some discrete components are used. FURUNO Electric Co., Ltd. believes identifying these components is of no value for shipboard maintenance; therefore, they are not listed in the manual. Major modules can be located on the parts location figures below.

APPENDIX 9 JIS CABLE GUIDE

Cables listed in the manual are usually shown as Japanese Industrial Standard (JIS). Use the following guide to locate an equivalent cable locally.

JIS cable names may have up to 6 alphabetical characters, followed by a dash and a numerical value (example: DPYC-2.5).
For core types D and T, the numerical designation indicates the *cross-sectional Area (mm²)* of the core wire(s) in the cable.
For core types M and TT, the numerical designation indicates the *number of core wires* in the cable.

1. Core Type
D: Double core power line
T: Triple core power line
M: Multi core
TT: Twisted pair communications
      (1Q=quad cable)

2. Insulation Type
P: Ethylene Propylene Rubber

3. Sheath Type
Y: PVC (Vinyl)

4. Armor Type
C: Steel

5. Sheath Type
Y: Anticorrosive vinyl sheath

6. Shielding Type
SLA: All cores in one shield, plastic tape w/aluminum tape
-SLA: Individually shielded cores, plastic tape w/aluminum tape

DPYCY

TPYCY

MPYC-4

TTYCSLA-4

EX: 1 2 3 4 5 6
     TTYCYSLA - 4
Designation type ⌐ # of twisted pairs ⌐

 1 2 3 4
MPYC - 4
Designation type ⌐ # of cores ⌐

The following reference table lists gives the measurements of JIS cables commonly used with Furuno products:

Type	Core Area	Core Diameter	Cable Diameter	Type	Core Area	Core Diameter	Cable Diameter
DPYC-1.5	1.5mm²	1.56mm	11.7mm	TTYCSLA-1	0.75mm²	1.11mm	9.4mm
DPYC-2.5	2.5mm²	2.01mm	12.8mm	TTYCSLA-1T	0.75mm²	1.11mm	10.1mm
DPYC-4	4.0mm²	2.55mm	13.9mm	TTYCSLA-1Q	0.75mm²	1.11mm	10.8mm
DPYC-6	6.0mm²	3.12mm	15.2mm	TTYCSLA-4	0.75mm²	1.11mm	15.7mm
DPYC-10	10.0mm²	4.05mm	17.1mm	TTYCY-1	0.75mm²	1.11mm	11.0mm
DPYCY-1.5	1.5mm²	1.56mm	13.7mm	TTYCY-1T	0.75mm²	1.11mm	11.7mm
DPYCY-2.5	2.5mm²	2.01mm	14.8mm	TTYCY-1Q	0.75mm²	1.11mm	12.6mm
DPYCY-4	4.0mm²	2.55mm	15.9mm	TTYCY-4	0.75mm²	1.11mm	17.7mm
MPYC-2	1.0mm²	1.29mm	10.0mm	TTYCY-4SLA	0.75mm²	1.11mm	19.5mm
MPYC-4	1.0mm²	1.29mm	11.2mm	TTYCYSLA-1	0.75mm²	1.11mm	11.2mm
MPYC-7	1.0mm²	1.29mm	13.2mm	TTYCYSLA-4	0.75mm²	1.11mm	17.9mm
MPYC-12	1.0mm²	1.29mm	16.8mm				
TPYC-1.5	1.5mm²	1.56mm	12.5mm				
TPYC-2.5	2.5mm²	2.01mm	13.5mm

SPECIFICATIONS OF SATELLITE COMPASS
SC-70/130

1   GENERAL

1.1	Receiving frequency	1575.42 MHz (GPS/GALILEO), 1602.5625 MHz (GLONASS)
1.2	Tracking code	C/A code (GPS), E1B (GALILEO), L1OF (GLONASS)
1.3	Positional accuracy (dependent on ionospheric activity and multipath)	
	GPS	10 m approx. (2drms, HDOP<4)
	DGPS	5 m approx. (2drms, HDOP<4)
	WAAS	3 m approx. (2drms, HDOP<4)
	MSAS	7 m approx. (2drms, HDOP<4)
1.4	Ship's speed accuracy (SOG)	
		0.2 kn rms (tracking satellites 3 or 4)
		0.02 kn rms (tracking satellites 5 or more)
1.5	Ship's speed accuracy (VBW, speed on ground)	
		2.0% of ship's speed or 0.2 kn whichever is the greater (tracking satellites 3 or 4)
		0.2% of ship's speed or 0.02 kn whichever is the greater (tracking satellites 5 or more, at antenna position)
		0.2% of ship's speed or 0.08 kn rms (tracking satellites 5 or more, at another position)
1.6	Course accuracy	
	SC-70	0.4° RMS
	SC-130	0.25° RMS
1.7	Course resolution	0.1°, 0.01° or 0.001° (select from menu)
1.8	Attitude resolution	0.1°, 0.01° or 0.001° (select from menu)
1.9	Rate of turn	0.1°/s, 0.01°/s or 0.001°/s (select from menu)
1.10	Tracking bearing	45°/s
1.11	Position fixing time	90 s approx. (typical)
1.12	Attitude accuracy	Pitch/ Roll: 0.4° RMS
1.13	Heave accuracy	5 cm (1σ)

2   DISPLAY UNIT

2.1	Screen	4.3-inch color LCD, 95.04 mm (W) x 87.12 mm (H)
2.2	Resolution	480 x 272 dots (WQVGA)
2.3	Brilliance	600 cd/m^2 typical
2.4	Contrast	17 levels
2.5	Display mode	Heading, Nav data, Rate of turn and Speed (Non-IMO mode only)
2.6	Visible distance	0.65 m nominal

3   INTERFACE (JUNCTION BOX)

3.1	Number of ports (junction box)	
	IEC61162 (NMEA0183)	IEC61162-2: 1 port, IEC61162-1: 8 ports (I/O: 4, O: 4)
		External beacon input (DATA5 port): RTCM SC-104 V2.3 (RS-485), ITU-R M823
	NMEA2000	1 port
	AD-10	4 ports, for heading output
	RS-485	1 port, for display unit connection

	LAN	2 ports, Ethernet, 100Base-TX, RJ45 connecter, IGMPv2 acceptable (for IEC61162-450 and maintenance)
	USB	1 port for maintenance

3.2 Data sentences

DATA ports

Input	ACK, ACM, ACN, HBT, HDT, MSK, MSS, THS, VBW*2, VDR*2
Output	ALC, ALF, ALR, ARC, DTM, GBS, GGA, GLL, GNS, GRS, GSA, GST, GSV, HBT, HDG*2, HDM*2, HDT*1, HRM*2, MSK, POS, RMC, ROT, THS, VBW*2, VDR*2, VHW*2, VLW*2, VTG, XDR*2, ZDA

NETWORK port

Input	ACK, ACM, ACN, HBT, SRP
Output	ALC, ALF, ALR, ARC, DTM, GBS, GGA, GLL, GNS, GRS, GSA, GST, GSV, HBT, HDG, HDM, HDT*1, HRM*2, POS, RMC, ROT, SRP, THS, VBW*2, VDR*2, VHW*2, VLW*2, VTG, XDR*2, ZDA

*1: Not used for new SOLAS vessels.

*2: for Non-IMO types only.

3.3 Output proprietary sentences

PFEC	GPatt, GPhve, GPimu, pidat, pireq

3.4 PGN

Input	059392/904, 060928, 061184, 126208/720/996
Output	059392/904, 060928, 061184, 065280, 126208/464/720/992/996, 127250/251/252/257/258, 129025/026/029/033/044/291/539/540/545/547, 130310/312/314/316/577/578/822/823/842/843/845/846

3.5 IEC61162-450 transmission group (datagram type: UdPbC only)

Input	MISC, SATD, NAVD, NETA, PROP
Output	Arbitrary (default: SATD)

3.6 Other network function excepted IEC61162-450

NTP, HTTP

4 POWER SUPPLY

4.1 Junction box   12-24 VDC: 2.1-1.1 A (included antenna unit and display unit)

4.2 AC/DC power supply unit (option)

PR-240	100-115/220-230 VAC, 1 phase, 50/60Hz and 24VDC for back-up
PR-241	100-230 VAC, 1 phase, 50-60 Hz and 24 VDC for back-up

5 ENVIRONMENTAL CONDITIONS

5.1 Ambient temperature

Antenna unit	-25°C to +55°C (storage: -25°C to +70°C)
Display unit/ Junction box	-15°C to +55°C

5.2 Relative humidity   95% or less at +40°C

5.3 Degree of protection

Antenna unit	IP56
Display unit	IP22 (IP35: option)
Junction box	IP20 (IP22: bulkhead mount)

5.4 Vibration   IEC 60945 Ed.4

FURUNO

6   UNIT COLOR
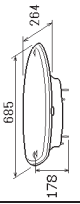

6.1   Antenna unit   N9.5

6.2   Display unit/ Junction box N2.5
